# World Hydrography Day 2017

*“Mapping our  
seas and  
oceans –  
more  
important  
than ever”*

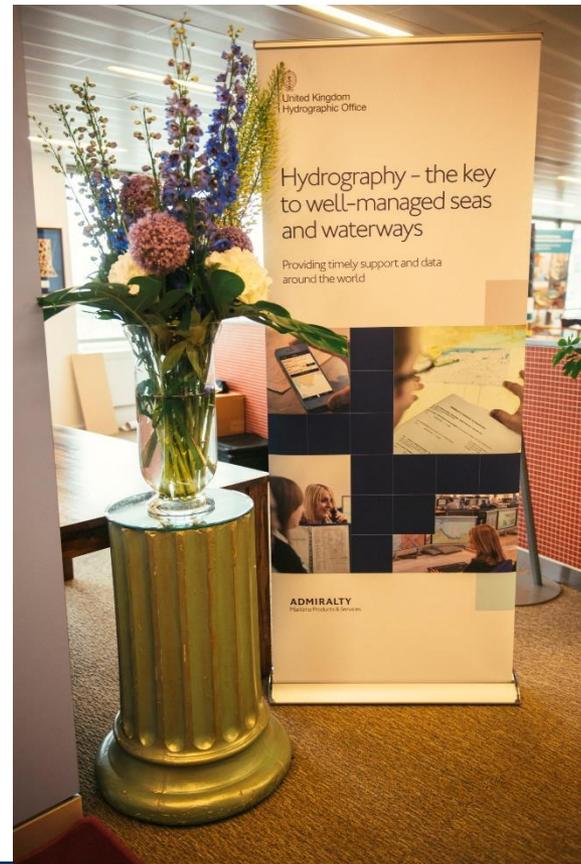

United Kingdom  
Hydrographic Office

World Hydrography Day was established in 2006, under a UN resolution by the International Hydrographic Organisation (IHO). Its purpose is to give prominence to hydrography and the work of the IHO and its member states around the globe.

In order to promote World Hydrography Day 2017, the UKHO will be hosting an interactive family day at the Museum of Somerset. The local community will have the chance to learn about hydrography and why its relevant in today's environment, through a mix of maritime related activities, including the opportunity to meet expert mariners.
