FROM THE NORTH POLE...

In 2017, after 90 years, Italy is leading again a scientific campaign in the Arctic region. The surveys of the area will be made available to the Norwegian National Charting Authority.

...TO THE SOUTH POLE

At the same time, Italian surveys in Antarctica are being carried out to update the assigned nautical charts.

The hydrographers' job begins where earth ends.

It is our way of saying that mapping seas, oceans and waterways is more important than ever.
