

# The Nippon Foundation – GEBCO SEABED 2030

100% of the Ocean Floor Mapped by 2030

# Seabed 2030 Mission

## 100% of the Ocean Floor Mapped by 2030

To empower the world to make *policy decisions, use the ocean sustainably and undertake scientific research* based on detailed bathymetric information of the Earth's seabed

### Supports United Nations Sustainable Development Goal 14:

to conserve and sustainably use the world's oceans, seas and marine resources

2021  
2030 United Nations Decade  
of Ocean Science  
for Sustainable Development

# What does “100% mapped” mean?

## The GEBCO global terrain model grid

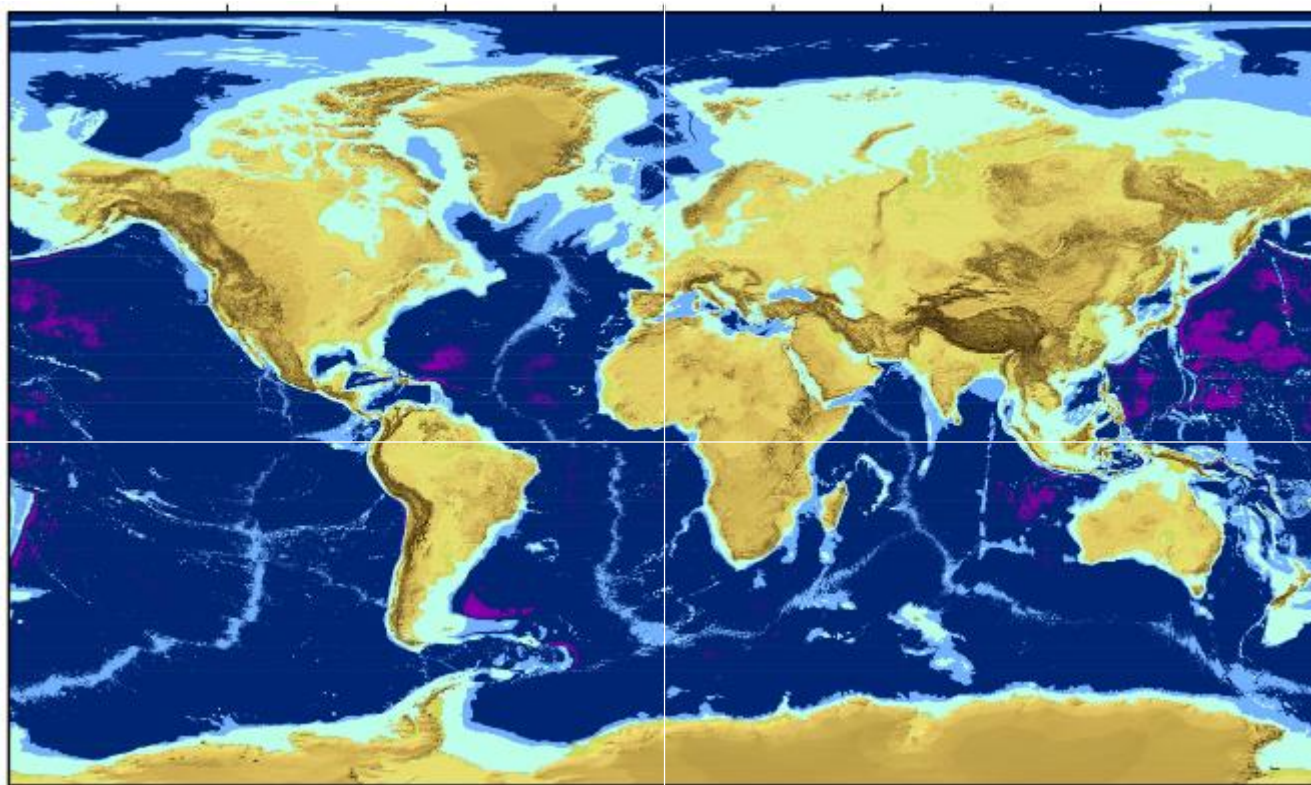

- ship-track soundings + interpolation guided by satellite-derived gravity data
- Includes regional grids which may be based on different interpolation models

**18% of 30'' cells have depth measurements**

**6% of 15'' cells have depth measurements**

- Real depth measurements
- Interpolated depth values
- Depth values derived from statistics of real depth values.

# Target Grid Variable Resolution

**Target GEBCO Grid  
Depth-dependent Variable Resolution**

Depth Range	Resolution	% of ocean
0–1500 m	100 × 100 m	13.7
1500–3000 m	200 × 200 m	11
3000–5750 m	400 × 400 m	72.6
5750–11,000 m	800 × 800 m	2.7

# Four Pillars of Seabed 2030

- **Data Assembly and Coordination**
  - Integrate and process existing data & identify data gaps to inform future mapping missions
  - Promote data sharing by encouraging contribution of data to the IHO DCDB
  - Create new data products – distribute through GEBCO
- **Global Community Engagement**
  - Identify & engage stakeholders through community events, traditional & digital media
- **Consolidate Technical and Human Capacity**
  - Explore and leverage new technology
  - Engage GEBCO Nippon Foundation Training Project Alumni
- **Cross-cutting area of Corporate Governance**
  - Strong stakeholder communication
  - Legal and accounting standards

# Working plan

- WP 1:** Gathering, synthesizing, publishing bathymetric data  
*Merging all available data into the high resolution ocean map*
- WP 2:** Development of standards, data assembly and delivery tools  
*Developing the tools and systems to facilitate building and using the map.*
- WP 3:** Technology innovation  
*Identifying and encouraging technical innovation in bathymetric mapping*
- WP 4:** Networking: map the gaps  
*Future mapping expeditions to increase the coverage*
- WP 5:** Management  
*Managing the project*

# Seabed 2030 Culture

- Co-operation and Community Building
  - 3,000 individuals, 40 organizations, 50 countries and growing
- Coordination
  - Initial Seabed 2030 focus on > 200 meters water depth
  - Hydrographic Offices critical < 200 meters water depth
- Crowdsourcing
  - Fishing boats, cargo, passenger and cruise ships, private yachts...
- Credit and Attribution
  - Recognize data contributions, in-kind services, promotion, capacity building...

# Seabed 2030 Governance & Operations

# Seabed 2030 Governance & Operations Leader Team

Operational since 1<sup>st</sup> February 2018

From left to right:

- Graham Allen (Establishment Team)
- Vicki Ferrini (Regional Centre Lead)
- Larry Mayer (Regional Center co-Lead)
- Helen Snaith (Global Center Lead)
- Boris Dorschel (Regional Center Lead)
- Pauline Weatherall (Digital Atlas Manager)
- Martin Jakobsson (Regional Center co-Lead)
- Geoffroy Lamarche (Regional Center Lead)
- Patrick Orr (Comms)
- Henry Gilliver (Comms)

# Seabed 2030 Governance & Operations Strategic Advisory Group

Dawn Wright  
Chief Scientist, ESRI

Bjorn Jalving  
Executive VP, Konsberg Maritime

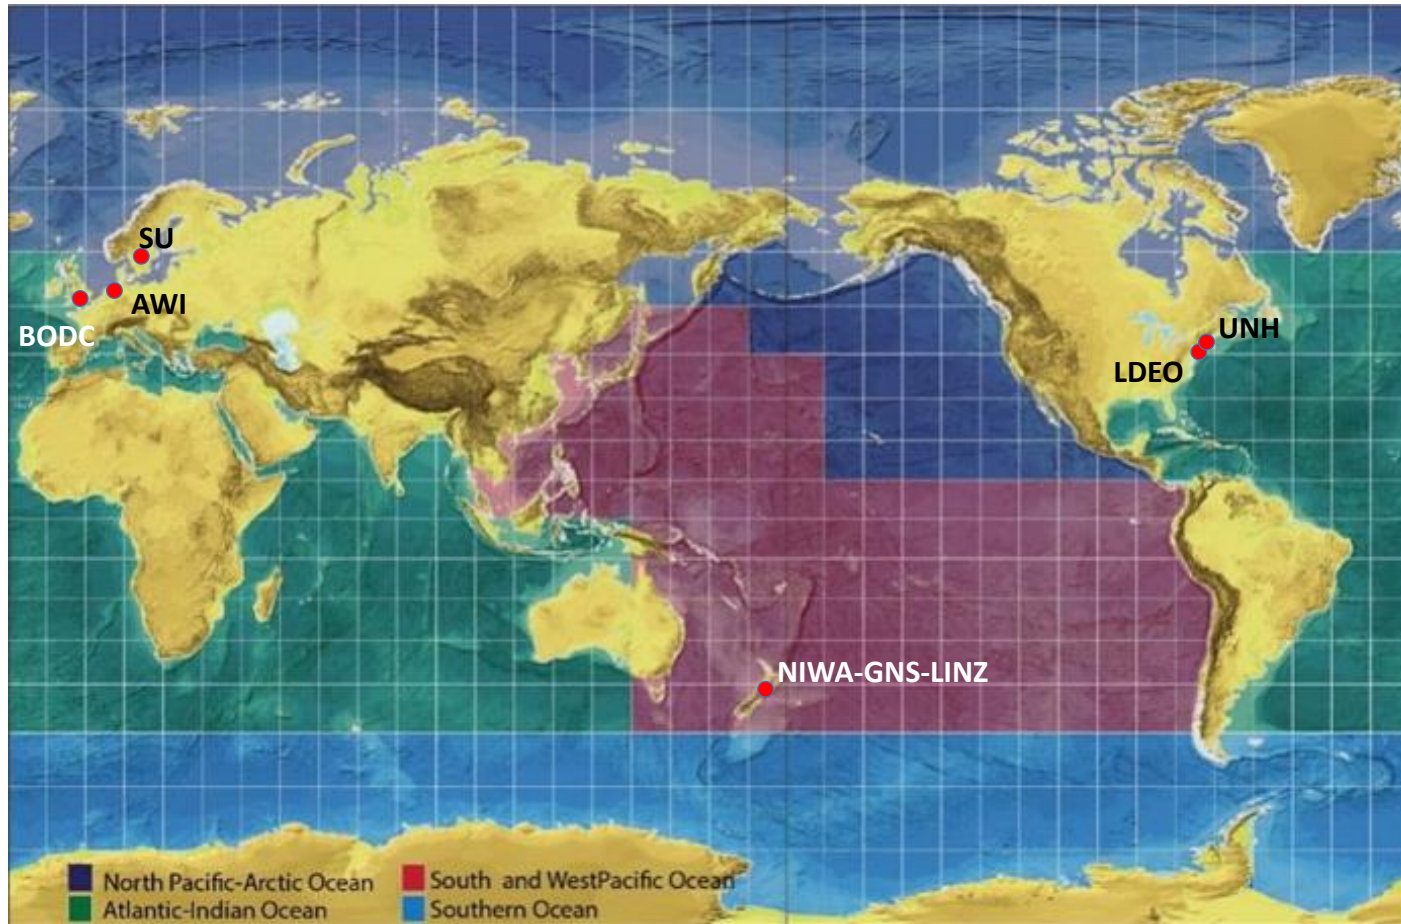

Dr. Kilaparti Ramakrishna  
Head of Strategy, Green Climate Fund

Yulia Zarayskaya  
NF-GEBCO Alumni Team Lead XPrize

# Regional Approach

- Regional stakeholders
- Regional data assembly & coordination
- Regional products feed into global GEBCO products
- Follows successful model of GEBCO Regional Mapping approach

# Data Sources

Break down of the source of data types that the GEBCO grid is based on

Grid cell type (30 arc-second)	GEBCO_2014	New grid
Interpolation guided by satellite-derived gravity data	66.5%	62.4%
Interpolation guided by computer programme, e.g. GMT	14%	14.3%
Multibeam	9%	12.4%
Single beam	1.9%	1.8%
Pre-generated grid	2.7%	4.3%
Unidentified track type	3.9%	2.8%
Isolated soundings, e.g. ENC soundings	0.1%	0.1%
Contours	1.9%	1.9%
