

## IRCC 2nd Workshop - Strategic Plan

# South West Atlantic Hydrographic Commission (SWAtHC) Proposals to calculate the Strategic Performance Indicators

**IHO**

International  
Hydrographic  
Organization

- SPI 1.2.2

We propose to calculate this SPI, using ENC's Usage Bands 4 and 5 in conjunction with CATZOCs A1, A2, B and C.

**IHO**

International  
Hydrographic  
Organization

- SPI 1.3.1

As this indicator is related to capacity building training, we suggest to adopt S-101 and S-124 (Navigational Warnings) for this indicator. It should be noted that S-124 is related to Phase 1 of the IHO Capacity Building Strategy and that this phase is considered a priority by the IHO.

We suggest not to use S-102 product for this indicator, as it is not clear if a reasonable number of IHO Member States will adopt S-102 product.

IHO CBSC should develop the method to derive the measurable figure.

IHO

International  
Hydrographic  
Organization

- SPI 2.1.1

Once the IHO MSDI portal is established, it will be possible to quantify this indicator from the measurement of the MSDIs of the IHO Member States. IHO Member States need to configure their portals to measure visits and data/information downloads.

**IHO**

International  
Hydrographic  
Organization

- SPI 2.2.1

We propose to calculate this SPI, using ENCs Usage Band 3 in conjunction with CATZOCs A1, A2, B and C.

**IHO**

International  
Hydrographic  
Organization

- SPI 2.3.1

We suggest to conduct a survey among IHO Member States on their compliance with the United Nations Shared Guiding Principles for Geospatial Information Management. This survey should contain weighted questions, to obtain a weighted average. IHO MSDIWG and UN-GGIM HWG would be in charge of developing this survey and setting the weights for the questions.

IHO Member States could contribute to review those questions.
