

## ARHC – IHO Strategic Plan 2021-2026: GAP Analysis

Date of last edit 2022-03-29 (Ref: IHO Strategic Plan 2021-2026)

GOAL 1	Target	Current State	Gap	Actions
<p><b>Goal 1: Evolving the hydrographic support for safety and efficiency of maritime navigation, undergoing profound transformation</b></p>	<p>1.1 Deliver standards for hydrographic data and specifications of hydrographic products; support their regular production; and coordinate regional and global services for their provision</p> <p>1.2 Develop standards, specifications and guidelines in the areas of data assurance, including cyber security and data quality assessment</p> <p>1.3 Use capacity building and training to develop and increase the ability of Member States to support safety and efficiency of maritime navigation</p>	n/a	n/a	<p><b>Highlights/observations:</b></p> <ul style="list-style-type: none"> <li>-Most ARHC Member States (MS) are active in IHO bodies which are responsible for the development of standards, specifications, and guidelines for products, services, and data quality.</li> <li>-They work with each other, participate in the IHO WENDWG and/or are members of RENCs in an effort to coordinate the production and the secure delivery of quality national, regional and global products and services.</li> <li>-All MS are capable of supporting safe and efficient navigation in most of their waters, however, in many Arctic areas, there still exist shortcomings in the quality and coverage of hydrographic data.</li> <li>-MS are generally well advanced with respect to their capacities for deliver hydrographic services. Several MS are actively support capacity building (CB) efforts both in terms of the IHO 3-phase CB Strategy and other CB-related projects such as e-learning development and the IHO project on <i>Empowering Women in Hydrography</i>.</li> <li>-Training (in-person and on-line) is an ongoing activity in all ARHC MS.</li> <li>-Ultimately, a dashboard indicating the progress of the all SPIs in the Strategic Plan should be developed.</li> <li>-MS are promoting the use of S-xxx to other potential data providers.</li> </ul>
<p><b>Strategic Performance Indicators</b></p> <p><b>1.1.1</b></p>	<p>Percentage of Member States having operationalized production and distribution of hydrographic data products and services based on IHO Universal Hydrographic Data Model (S-100), under an implementation framework of coordination and agreed timelines (<b>2026: 100%</b>)</p>	40%	60%	<p><b>Highlights/observations:</b></p> <ul style="list-style-type: none"> <li>-This SPI requires a better definition (see Questions below).</li> <li>-Most MS have done some preliminary development on products and services for the 'First Step' noted in the <i>Roadmap for the S-100 Implementation Decade, Annex 2</i> plan and most are confident they will achieve this goal.</li> <li>-Not all products/services in the Roadmap fall under the authority of the hydrographic offices.</li> <li>-S-101 ENCs will be the highest priority for all MS HOs.</li> <li>-S-102 (bathymetric surface) production will be targeted for selected waterways and areas.</li> <li>-One ARHC MS is regularly producing and distributing S-102 data, and two are producing S-111 (surface currents) data.</li> <li>-Some MS are taking the opportunity to improve/review the content of ENCs e.g. CATZOC, uncertainty values, etc.</li> </ul>

**ARHC – IHO Strategic Plan 2021-2026: GAP Analysis**

Date of last edit 2022-03-29 (Ref: IHO Strategic Plan 2021-2026)

				<p><b>ARHC outstanding challenge(s):</b></p> <ul style="list-style-type: none"><li>-Having adequate coverage with S-100 products/services will be critical to the end users' demand. S-101 alone will not likely be enough to convince users to upgrade their systems.</li><li>-Not all the specifications in the 'First Step' have been completed and fully tested for production environments.</li><li>-The implementation of S-128, in particular, needs to be better understood.</li><li>-The line between route monitoring and route planning can be fuzzy and mariners may demand more those planning product/services prior to 2026.</li><li>-Dual-fuel and backward/forward conversion issues are still being sorted out.</li><li>-In most MS, domestic inter-agency coordination and collaboration will be required to deliver the entire suite of the S-100 products/services in the Roadmap.</li></ul> <p><b>ARHC outstanding question(s):</b></p> <ul style="list-style-type: none"><li>-As previously stated, this SPI needs a defined and applied consistently across all MS. For example, the numbers given for the 'Current State' is 40% because 2 of the 5 MS are producing some (2) products/services. Is this meaningful? If all 5 MS produce only S-101, does this constitute 100%?</li><li>-Does 'operational' mean through a RENC, or does any delivery mechanism count?</li><li>-How can the SPI be modified to capture the 'package' of First Step S-100 products and services?</li><li>-How can the aspect of coverage be measured?</li><li>-Is more than one measure required?</li><li>-Could the IHO on-line catalogue/INToGIS leveraged to generate these measures?</li><li>-Can the calculation of this SPI be done automatically?</li></ul> <p><b>ARHC outstanding action(s):</b></p> <ul style="list-style-type: none"><li>-Redefine this SPI. This should be coordinated with other RHCs, MS, and HSSC.</li><li>-MS to report annually on this measure.</li></ul>
--	--	--	--	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

**ARHC – IHO Strategic Plan 2021-2026: GAP Analysis**

Date of last edit 2022-03-29 (Ref: IHO Strategic Plan 2021-2026)

<p><b>1.1.2</b></p>	<p>Number of hydrographic data products and services based on the Universal Hydrographic Data Model that cater for the new requirements: autonomous shipping, reduction of emissions</p>	<p><b>TBD</b></p>	<p><b>100%</b></p>	<p><b>Highlights/observations:</b>                      -IHO has stood up a MASS project team (PT). Four of five ARHC MS participate on this PT.                      -S-111 data is available globally at small scale. S-102 is available in selected, dynamic, and high-traffic areas, and S-104 data should become available in similar areas beginning in 2022.                      -This information should be collected and reported by HSSC. HSSC                      -It is unclear which subset of the Roadmap elements are tied to autonomous shipping and the reduction of emissions.                      -SPI 1.1.2 is quite similar to SPI 1.2.1                      -HSSC (HSSC12 2021 4.3A) indicates that the 7 product specifications of ‘Step 1’ should be included in this count.</p> <p><b>ARHC outstanding challenge(s):</b>                      -The S-xxx products and services required for MASS and the reduction of emissions have not been defined and the timeframe for doing this has not been determined.                      -MASS will require a massive coordinated approach between many domestic and international entities; this includes regulations. The knowledge and understanding of how this system will work is still developing.                      -A positive business case for implementing a S-100-based system has not been widely acknowledged.                      -The amount of HO resources required to support these new products and services remains unknown.</p> <p><b>ARHC outstanding question(s):</b>                      -How are these requirements to be defined?                      -Does the ‘number’ refer to the types of data, e.g. S-101, S-102 etc., or the number of datasets for each type of data?                      -Can the calculation of this SPI be done automatically?</p> <p><b>ARHC outstanding action(s):</b>                      -ARHC to begin preliminary work on determining which routes in the region may be used by autonomous vessels.</p>
---------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-------------------	--------------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

## ARHC – IHO Strategic Plan 2021-2026: GAP Analysis

Date of last edit 2022-03-29 (Ref: IHO Strategic Plan 2021-2026)

<p><b>1.2.1</b></p>	<p>Percentage of hydrographic data products and services based on the S-100 model that are covered by IHO standards, specifications and guidelines on cyber security (<b>2026: 100%</b>)</p>	<p><b>TBD</b></p>	<p><b>100%</b></p>	<p><b>Highlights/observations:</b>                      -This information should be collected and reported by HSSC.                      -For several ARHC MS, the implementation of cyber-security will be done at the RENC/VAR level.                      -HSSC (HSSC12 2021 4.3A) notes, “7 Product Specifications includes cyber security and data quality assessment”.</p> <p><b>ARHC outstanding challenge(s):</b>                      -Establishing cybersecurity measures on all parts of the value chain, including those outside the control of the HO.</p> <p><b>ARHC outstanding question(s):</b>                      -Have the cyber-security specifications been finalized?                      -How is the denominator in this equation calculated?                      -What is the difference between SPI 1.1.2 and SPI 1.2.1?                      -Does ‘covered’ mean that the data [during transfer] is supposed to be encrypted?                      -Do all S-xxx datasets have to be encrypted?                      -What if an HO (e.g. US) does not wish to encrypt its products and services? Will this measure for them always be 0%?</p> <p><b>ARHC outstanding action(s):</b>                      -None</p>
<p><b>1.2.2</b></p>	<p>Percentage of navigationally significant areas (e.g. charted traffic separation schemes, anchorages, channels) for which the adequacy of the hydrographic knowledge is assessed through the use of appropriate quality indicators (<b>2026: 100%</b>)</p>	<p><b>25-100 (TBBD*)</b></p>	<p><b>75-0</b></p>	<p><b>Highlights/observations:</b>                      -The IRCC direction with respect to this SPI is to, “Derive one estimate figure for the RHC in %” (IRCC CL 01/2021 Annex A).                      -All MS report that the products that they provide have been assessed for adequacy in some systematic way with quality indicators.                      -For some areas e.g. CA Arctic and Greenland, many of these products may be at a small (offshore) scale.                      -These factors lead to a wide range in this SPI.                      (*TBBD -To be better determined.)                      -The area (km<sup>2</sup>) of navigationally significant areas needs to be calculated for some MS.                      -For MS with large EEZs in the Arctic like CA and DK, the percentages will not be high, e.g. the EEZ of Greenland is approximately 2 000 000 km<sup>2</sup>, and the EEZ can be can include areas permanently covered with ice.                      -US &amp; FI (100%) and NO (90%) are at or very close to this target.                      -In many areas in the Arctic demand for products is user-driven, so the</p>

**ARHC – IHO Strategic Plan 2021-2026: GAP Analysis**

Date of last edit 2022-03-29 (Ref: IHO Strategic Plan 2021-2026)

			<p>target may keep moving.                      -This determination of this measure will be supported by HSSC - DQWG/ENCWG/HSWG-CATZOC/Quality of Bathymetry (HSSC12 2021 4.3A).</p> <p><b>ARHC outstanding challenge(s):</b>                      -In C-55 the coverage of charts is categorized by usage (i.e. Offshore passage/landfall and coastal passage/approaches and ports) and not by navigational significance. That requires some further data distilling to arrive at this SPI. For example, NOAA does have a “hydrohealth model” that governs its assessment of navigationally significant areas.</p> <p><b>ARHC outstanding question(s):</b>                      -Could this measure can be considered subset of the SPI 2.2.1?                      -Are there any areas of the high seas that are considered navigationally significant?                      -Would the IHO consider adding the layer(s) of navigationally significant areas to INTogIS? This could pave the way to using INTogIS to generate this measure.</p> <p><b>ARHC outstanding action(s):</b>                      -ARHC to come to a common definition of ‘navigationally significant’, which also considers the IMO definition, if it exists.                      -Task OTWG to calculate this SPI based on this definition and using any information e.g. CATZOC already captured in INTogIS, if possible.</p>
<p><b>1.3.1</b></p>	<p>Ability and capability of Member States to meet the requirements and delivery phases of the S-100 implementation plan (<b>2026: 50%</b>)</p>	<p><b>80</b></p>	<p><b>20</b></p> <p><b>Highlights/observations:</b>                      -From IRCC, “Derive a figure for each region of the percentage of MS, that are capable to provide S-101 and S-102 products data”.                      -It is assumed that the distinction from SPI 1.1.1 that is being sought by this measure relates to the technical capacity to produce as opposed to actual production and delivery.                      -Four of the five MS of the ARHC report this ability and capability and are confident about meeting the Roadmap timelines.                      -Most ARHC MS are active in the IHO bodies working on developing the standards, abilities, and capabilities required meet the Roadmap timelines.                      -References to the <i>Roadmap for the S-100 Implementation Decade</i></p>

**ARHC – IHO Strategic Plan 2021-2026: GAP Analysis**

Date of last edit 2022-03-29 (Ref: IHO Strategic Plan 2021-2026)

				<p>(2020-2030) should be clear, unambiguous, and consistently applied. For example, this SPI refers to the “delivery phases” of the S-100 implementation, but that phrase does not appear in the document itself. Related, it is suggested the Roadmap document be more readily available and easier to find on the IHO web page.</p> <p><b>ARHC outstanding challenge(s):</b> -As mentioned previously, the production of some of the S-xxx products and services are the remit of the HOs; inter-agency coordination will be needed to meet the requirements.</p> <p><b>ARHC outstanding question(s):</b> -Is S-101 data converted from S-57 considered sufficient or must this be native S-101 production? -How is the element of geographic coverage to be reported or integrated into this measure?</p> <p><b>ARHC outstanding action(s):</b> -Ask remaining MS to report on this item.</p>
--	--	--	--	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

## ARHC – IHO Strategic Plan 2021-2026: GAP Analysis

Date of last edit 2022-03-29 (Ref: IHO Strategic Plan 2021-2026)

GOAL 2	Target	Current State	Gap	Actions
<p><b>Goal 2: Increasing the use of hydrographic data for the benefit of society</b></p>	<ul style="list-style-type: none"> <li>Build a portal to support and promote regional and international cooperation in marine spatial data infrastructures (MSDI)</li> <li>Promote new tools and methods to accelerate and increase coverage, consistency, quality of surveys in poorly surveyed areas</li> <li>Apply <u>UN shared guiding principles for geospatial information management</u> in order to ensure interoperability and extended use of hydrographic data in combination with other marine-related data</li> </ul>	n/a	n/a	<p><b>Highlights/observations:</b></p> <ul style="list-style-type: none"> <li>-The scope and governance of any portal must be clearly defined.</li> <li>-The majority of ARHC MS are active internationally in the areas of spatial data infrastructures e.g. IHO MSDIWG, and the management geospatial data e.g. UN-GGIM. See also SPI 2.3.1.</li> <li>-The majority of ARHC MS are actively testing new technologies, e.g. uncrewed survey vessels (USVs), and methods, e.g. crowd-sourced bathymetry to in data coverage and data quality.</li> </ul> <p><b>ARHC outstanding challenge(s):</b></p> <ul style="list-style-type: none"> <li>-Due to varying business models, the accessibility to data is challenging to harmonize across agencies and countries.</li> <li>-HOs require IT professionals to implement some of these changes, putting additions stress on resources.</li> <li>-Implications and opportunities of the ‘S-100 World’ not fully understood, yet.</li> <li>-Building a portal is only one part of the equation. Communicating its existence and usefulness to the rest of society is another, equally important part.</li> </ul> <p><b>ARHC outstanding question(s):</b></p> <ul style="list-style-type: none"> <li>-Does ARHC need strategy (including communications) particular for the Arctic, “...to accelerate and increase coverage...”?</li> <li>-Is ARHC making significant efforts in outreach to Indigenous peoples and Northern communities in the region?</li> </ul>
2.1.1	Number of hits downloading data/information from the portal	In progress	TBD	<p><b>Highlights/observations:</b></p> <ul style="list-style-type: none"> <li>-IRCC proposed that the MSDIWG provide a procedure of the development of the portal at the IHO Secretariat.</li> <li>-Currently, there is no regional ‘portals’.</li> <li>-Several ARHC MS do have well-developed data/information portal(s) with significant offerings.</li> <li>-Any approach to a portal must be standards-based and the FAIR principles should be applied.</li> </ul> <p><b>ARHC outstanding challenge(s):</b></p> <ul style="list-style-type: none"> <li>-The design, standing-up, and maintenance of the portal(s) represent a further resource commitment.</li> </ul>

**ARHC – IHO Strategic Plan 2021-2026: GAP Analysis**

Date of last edit 2022-03-29 (Ref: IHO Strategic Plan 2021-2026)

				<p>-There may be technical and policy issues related to consolidated or federated portals e.g. access to, and sharing of, national data.</p> <p><b>ARHC outstanding questions:</b></p> <ul style="list-style-type: none"> <li>-Does portal = MSDI in this situation?</li> <li>-What is the scope of the data and the information to be provided to and accessed by or through the portal?</li> <li>-Who (i.e. which MS) will 'own' this portal?</li> <li>-Is this portal to be linked to the IHO e.g. to the IHO online catalogue?</li> <li>-What is the timeline for this SDI? Yearly, would be appropriate.</li> <li>-What analytics should be employed?</li> </ul> <p><b>ARHC outstanding action(s):</b></p> <ul style="list-style-type: none"> <li>-ARHC to make a concerted effort to develop federated and/or consolidated MSDI(s)/portal(s) for the region.</li> </ul>
2.2.1	Percentage of adequately surveyed area per coastal state	In progress	TBD	<p><b>Highlights/observations:</b></p> <ul style="list-style-type: none"> <li>-It is assumed that 'adequately surveyed' equates to the measure described in C-55.</li> <li>-With the exception of Norway, the percentage of adequately surveyed areas in Region N, as reported in C-55, is low.</li> <li>-There may be some elements of this SPI that may complement the bathymetric data gap analysis (see 3.2.3).</li> <li>-It is interesting to note that while most MS report excellent chart coverage in the area, adequately surveyed area percentages are generally lower.</li> <li>-IRCC suggested that, using C-55 status of surveys data, areas where the value is less than 50% (33% [?]), be the focus and that the CBSC "derive rough figures from current C-55 and implement a routine procedure to derive percentage per coastal state in a simple manner, using also CATZOV information...".</li> </ul> <p><b>ARHC outstanding challenge(s):</b></p> <ul style="list-style-type: none"> <li>-The Arctic is a vast area and challenging environment to work in. This means the collection of bathymetric data by traditional hydrographic methods is slow and expensive.</li> <li>-Not all ARHC MS have reported this information to C-55, so regional analysis is not possible.</li> <li>-The methodology for computing adequacy is not the same between</li> </ul>

**ARHC – IHO Strategic Plan 2021-2026: GAP Analysis**

Date of last edit 2022-03-29 (Ref: IHO Strategic Plan 2021-2026)

			<p>HOs. E.g. CA uses the methodology proposed by UKHO and SHOM (Document CBSC16-08.3B (2016)).</p> <p>-Both Seabed 2030 (see SPI 3.2.3) and C-55 request information about ‘adequately surveyed’ areas, but the parameters for each differ both technically and geographically, which makes the collection of this information quite demanding for HOs.</p> <p><b>ARHC outstanding questions:</b></p> <p>-Currently, C-55 information is broken down by depth (greater and less than 200m) and quality of coverage (adequate, re-survey required, and never systematically surveyed) so what is the best method to calculate the overall ‘percentage’?</p> <p>-Should the SPI be divided into one element for data suitable for navigation and one element suitable for non-navigation uses e.g. Seabed 2030?</p> <p>-Could some C-55 information be captured in INTogIS to facilitate the extraction of this data?</p> <p><b>ARHC outstanding action(s):</b></p> <p>-ARHC to agree upon a common methodology for determining ‘adequacy’.</p> <p>-Engage with CBSC on this endeavour.</p> <p>-Ensure all ARHC MS provide or update adequately surveyed area data for Region N in C-55 as soon as possible.</p>
2.2.2	Number of new applications of the new version of Standards for Hydrographic Surveys (S-44)	TBD	<p><b>Highlights/observations:</b></p> <p>-All ARHC MS conduct hydrographic surveys in accordance with, or rely heavily on, the S-44 specifications. Surveys contracted by the HOs must also meet this standard, depending on the purpose of the survey.</p> <p>-S-44 is referenced on MS web sites.</p> <p>-New methods, technologies, and operations for hydrographic surveying are being tested and deployed with the expectation that these innovations will be able to deliver outputs that conform to the S-44 specifications.</p> <p>-HSSC (HSSC12 2021 4.3A) indicated that the HSWG should monitor and report on this measure.</p> <p><b>ARHC outstanding challenge(s):</b></p> <p>-Continuing to improve the awareness of S-44 throughout the</p>

**ARHC – IHO Strategic Plan 2021-2026: GAP Analysis**

Date of last edit 2022-03-29 (Ref: IHO Strategic Plan 2021-2026)

				<p>hydrographic communities.                      -Setting up mechanisms within HOs to track and/or identify data sources and systems that conform to the ‘new’ S-44 specification.</p> <p><b>ARHC outstanding questions:</b>                      - What is the connection between this SPI and Target 2. 2 “Promote new tools and methods to accelerate and increase coverage, consistency, quality of surveys in poorly surveyed areas”?                      -What is meant by ‘new applications’? Is this <u>data</u> that has been collected to the specifications or <u>systems</u> (hardware, software, or procedures) that utilize S-44 in some way?                      -Is there a metadata element that could be utilized to assist in this counting?                      -What is the timeframe for this measure?                      -Is there a target number?                      -How would the counting of any of these elements be conducted and who would be responsible for collecting this data?                      -Does the download of the S-44 standards document constitute an application of the new/current standards? Would this type of counting be done by the IHO Secretariat?                      -Does ‘new version’ = ‘current version’ ?</p> <p><b>ARHC outstanding action(s):</b>                      -Ask HSSC for clarification on this SPI and work with the HSWG, as required.</p>
2.3.1	Number of HOs reporting success applying the principles in their national contexts <b>(2026: 70%)</b>	80% (of ARHC MS)	20%	<p><b>Highlights/observations:</b>                      -The majority of ARHC MS report success in their national contexts with respect to the applications UN shared guiding principles for geospatial information management .                      -European MS have also leveraged the INSPIRE principles.                      -ARHC MS participate in UN-GGIM MDWG.                      -IRCC proposed way forward is for MSDI WG and UN GGIM HWG to set up definition of what application means. Possibly providing information documents, and that MS (via RHCs) to report figures to IRCC and then to IHO Secretariat annually.                      -Most MS have implemented some type of open data policy.                      -The Global Maritime Traffic Density Service (GMTDS) and the World Port Index (WPI) from US-NGA are examples of applied FAIR principles.</p>

## ARHC – IHO Strategic Plan 2021-2026: GAP Analysis

Date of last edit 2022-03-29 (Ref: IHO Strategic Plan 2021-2026)

GOAL 3	Target	Current State	Gap	Actions
<p><b>Goal 3: Participating actively in international initiatives related to the knowledge and the sustainable use of the Ocean</b></p>	<ul style="list-style-type: none"> <li>Collaborate with other bodies who deliver capacity-building and training to improve effectiveness of capacity- building activities and programs</li> <li>Improve knowledge of the world's seafloors</li> <li>Implement a comprehensive IHO digital communication strategy in order to enhance its visibility and accessibility to its work</li> </ul>	n/a	n/a	<p><b>Highlights/observations:</b></p> <ul style="list-style-type: none"> <li>-ARHC has a standing Seabed 2030 and a Crowd-sourced Bathymetry (CSB) coordinator (both NO).</li> <li>-80% of the ARHC Full Members participate in the IHO CSBWG and several have their own national initiatives related to CSB and other data gathering, including engagement with northern communities.</li> <li>-ARHC has a MOU with the PAME working group of the Arctic Council to work collaboratively on matters of mutual interest.</li> </ul> <p><b>ARHC outstanding challenge(s):</b></p> <ul style="list-style-type: none"> <li>-The provision of data via a consolidated or federated MSDI e.g. Arctic Voyage Planning Guide (AVPG) has yet to be achieved.</li> <li>-ARHC has not developed a strategic plan to engage in the UN Decade of Ocean Science for Sustainable Development (UNDoOS).</li> </ul>
<p><b>Strategic Performance Indicators</b> 3.1.1</p>	<p>Percentage of Coastal States that are capable to provide marine safety information (MSI) according to the joint IMO/IHO/WMO manual on MSI <b>(2026: 90%)</b></p>	100%	0%	<p><b>Highlights/observations:</b></p> <ul style="list-style-type: none"> <li>-All ARHC MS are capable of providing MSI according to the IMO/IHO/IMO manual on MSI.</li> <li>-In some MS the promulgation of MSI is not the responsibility of the hydrographic offices.</li> <li>-The WNWNS should report this annually to IRCC.</li> </ul> <p><b>ARHC outstanding question(s):</b></p> <ul style="list-style-type: none"> <li>-Could C-55 and INTogIS be redesigned to allow MSI-related status to be drawn automatically from those sources?</li> </ul> <p><b>ARHC outstanding action(s):</b></p> <ul style="list-style-type: none"> <li>-None</li> </ul>
3.2.1	<p>Amount of data received per year by the IHO Data Centre for Digital Bathymetry (DCDB).</p>	<p><b>Not applicable to ARHC</b></p>	N/A	<p><b>Highlights/observations:</b></p> <p>ARHC believes that this SPI should be reported on by the DCDB.</p> <p><b>ARHC outstanding question(s):</b></p> <ul style="list-style-type: none"> <li>-Could SPI 3.2.2 be rolled up under this SPI using the same timeframe and providing a breakdown in contributions and contributors in the ways suggested below for 3.2.2. This may be more suitable for analysis by the RHCs.</li> </ul>

## ARHC – IHO Strategic Plan 2021-2026: GAP Analysis

Date of last edit 2022-03-29 (Ref: IHO Strategic Plan 2021-2026)

				<p><b>ARHC outstanding action(s):</b> -None</p>
3.2.2	Number of contributors to DCDB who are not hydrographic offices	Not applicable to ARHC	N/A	<p><b>Highlights/observations:</b> ARHC believes that this SPI should be reported on by the DCDB.</p> <p><b>ARHC outstanding question(s):</b> -What is the timeframe for this measure? E.g. year-over-year; last 10 years; since inception? Suggest using the same timeframe as 3.2.1 -What are the parameters of this measure: E.g. single-beam; multi-beam; all bathy data? -Is there a way for contributions to be broken down geographically, that is, by RHC areas? This would be more relevant to RHCs. -Is there value in knowing amount of data delivered to the DCDB from ARHC national HOs? -Is the volume of data received from a contributor relevant?</p> <p><b>ARHC outstanding action(s):</b> -None</p>
3.2.3	Percentage of total sea area that is Seabed 2030 compliant for incorporation into the GEBCO dataset and services	In progress	TBD	<p><b>Highlights/observations:</b> -ARHC MS are at varying stages of evaluating their coverage vis-à-vis the Seabed 2030 specifications. Those that are not finished the analysis hope to complete the task this year. -NO reported that it has 67% compliance, but only 33% of that is publicly available. -It is assumed that the reporting of this measure will be coordinated by the GEBCO GC.</p> <p><b>ARHC outstanding question(s):</b> -Could more precision be given to the definition of ‘Seabed 2030 compliant’? -Could more precision be given to the definition of ‘total sea area’? That is, does this mean within coastal state EEZ or within the limits of the RHC limits? What about the high seas within the RHC? Is this the realm of the RDACCs? -Is there any value in the better coordination of the activities of the RHCs and the RDACCs vis-à-vis Seabed 2020 activities.</p>

## ARHC – IHO Strategic Plan 2021-2026: GAP Analysis

Date of last edit 2022-03-29 (Ref: IHO Strategic Plan 2021-2026)

				<p>-Should the measure differentiate between what is publicly available and overall coverage?</p> <p><b>ARHC outstanding action(s):</b>                      -ARHC MS to complete the evaluation of their bathymetric data coverages vis-à-vis the Seabed 2030 specifications in time to report to C6/A3.</p>
3.3.1	Number of visits, likes, re-postings, etc. associated with the IHO social media sites	<b>Not applicable to ARHC</b>		<p><b>Highlights/observations:</b>                      ARHC understands that this SPI, and SPI 3.3.2, are the responsibility of the IHO Secretariat and that the Secretariat will employ the analytical tool(s) that best derive the information desired.</p> <p><b>ARHC outstanding question(s):</b>                      -What are the goals or objectives of these measures and how do they inform the success of the Strategic Plan? In other words, will this information be used to make adjustments to the implementation of the Strategic Plan? If not, why collect it.                      -Could the data be broken down into Regional (e.g. ARHC) pieces, so that the RHCs could use this information to influence their work plans?</p> <p><b>ARHC outstanding action(s):</b>                      -None</p>
3.3.2	Volume downloaded from the IHO website and Geographical Information System (GIS)	<b>Not applicable to ARHC</b>		<p><b>Highlights/observations:</b>                      -ARHC understands that this SPI, and SPI 3.3.1, are the responsibility of the IHO Secretariat and that the Secretariat will employ the analytical tool(s) that best derive the information desired.</p> <p><b>ARHC outstanding question(s):</b>                      -What is the breadth and depth of information for which the IHO Secretariat is considering assuming the role of data provider, particularly from the IHO GIS? Can this be done with the same level of IHO resources?                      -What are the expectations of MS with respect to contributing data to the IHO GIS?                      -What are the goals or objectives of these measures and how do they inform the success of the Strategic Plan? In other words, will this information be used to make adjustments to the implementation of the Strategic Plan? If not, why collect it?                      -Could the data be broken down into Regional (e.g. ARHC) pieces, so that the RHCs could use this information to influence their work plans?</p>

## **ARHC – IHO Strategic Plan 2021-2026: GAP Analysis**

Date of last edit 2022-03-29 (Ref: IHO Strategic Plan 2021-2026)

				<b>ARHC outstanding action(s):</b> -None
--	--	--	--	---------------------------------------------

### **ANNEX A**

ARHC actions identified as part of the IHO Strategic Plan gap analysis.

#### **1. GENERAL**

1.1 Develop a schedule or calendar for reporting dates/cycles on SPI by MS to ARHC and for ARHC to IRCC.

#### **GOAL 1 Actions**

**G1a.** Redefine SPI 1.1.1\*. This should be coordinated with other RHCs, MS, and HSSC.

*\*Percentage of Member States having operationalized production and distribution of hydrographic data products and services based on IHO Universal Hydrographic Data Model (S-100), under an implementation framework of coordination and agreed timelines.*

**G1b.** ARHC to begin preliminary work on determining which routes in the region may be used by autonomous vessels. (In support of SPI 1.1.2.)

**G1c.** ARHC to come to a common definition of ‘navigationally significant’, which also considers the IMO definition, if it exists. (1.2.2)

**G1d.** Task OTWG to calculate this SPI based on this definition and using any information e.g. CATZOC already captured in INToGIS, if possible. (1.2.2)

**G1e.** Ask remaining MS to report on SPI 1.3.1: *Ability and capability of Member States to meet the requirements and delivery phases of the S-100 implementation plan.*

#### **GOAL 2 Actions**

**G2a.** ARHC to agree upon a common methodology for determining ‘adequacy’ for SPI 2.2.1, and engage with CBSC on this endeavour.

**G2b.** Ensure all ARHC MS provide or update adequately surveyed area data for Region N in C-55 as soon as possible.

**G2c.** Ask HSSC for clarification on SPI 2.2.2 (*Number of new applications of the new version of Standards for Hydrographic Surveys (S-44)*) and work with the HSWG, as required.

**G2d.** ARHC to make a concerted effort to develop federated and/or consolidated MSDIs for the region.

## **ARHC – IHO Strategic Plan 2021-2026: GAP Analysis**

Date of last edit 2022-03-29 (Ref: IHO Strategic Plan 2021-2026)

**G2e.** ARHC to create a web presence to better communicate its activities and the data available from MS that could be of value to society.

**G2f.** Follow the work of the MSDI WG and UN GGIM HWG concerning the definition of SPI 2.3.1 *Number of HOs reporting success applying the principles in their national contexts* and engage as required.

**G2g.** Discuss the need for an ARHC strategy (including communications) particular for the Arctic, “...to accelerate and increase coverage...” of hydrographic data.

**G2h.** Consider adding ‘Outreach to Indigenous peoples and Northern communities in the region’ as a standing ARHC agenda item as part of the efforts to amplify use of hydrographic data for the benefit of society.

### **GOAL 3 Actions**

**G3a.** ARHC MS will complete their Seabed 2030 data gap analysis, broken down into publicly and non-publicly available data, working with the RDACCs if possible/practical in time to report to C6/A3.

**G3b.** ARHC to work with PAME to deliver tangible results under the ARHC-PAME MOU. For example, assist PAME in developing an S-122 layer for marine protected areas (MPAs)

**G3c.** ARHC to consider if it wants a UNDoOS engagement strategy and what that would look like. This could be related to the previous point and development of a regional MSDI.
