Hydrographic Databases

When implementing a hydrographic database for nautical chart production what should be considered?

1. SCAMIN
2. Clean up of existing data
3. Gridding or rescheming of data or products
4. Data coverage
5. Product outputs
6. Scale bands
7. Should cartography be in the data or the product?

Hydrographic Databases

How did your organisation prioritise?

- What did your organisation focus on?
- Which order did you undertake your tasks?
- Where did you start?
- What was possible to outsource?
 - What positive experiences did you have with outsourcing?

1. SCAMIN
2. Clean up of existing data
3. Gridding or rescheming of data or products
4. Data coverage
5. Product outputs
6. Scale bands
7. Should cartography be in the data or the product?
