

Charting the course for climate change adaptation

Overcoming technological challenges in coastal resilience and ocean science domains

Global developments... are driving key challenges...

Population growth

World population projected to reach 9.8 billion by 2050¹

Growing inequality

Unequal distribution of wealth and resources

Global warming

By 2050, climate change could drive 216 million people to migrate¹

Biodiversity and populations under threat

From Extreme weather, sea level rise, and mega-trends

¹ According to United Nations

² Based on data of The World Bank

Investing in our oceans and freshwater systems is vital to keep the planet safe and liveable

Ocean health

Coastal resilience

Inland water management

FUGRO

TOGETHER WE CREATE A SAFE & LIVEABLE WORLD

DETERMINED TO DELIVER

PREPARE FOR TOMORROW

WE DO WHAT'S RIGHT

WE BUILD TRUST

Introduce remote and digitalised workflows to enable a reduced carbon footprint

FUGRO

TOGETHER WE CREATE A SAFE & LIVEABLE WORLD

Combine people and technology to remain the world's leading Geo-data expert

The world's leading Geo-data specialist

Global player with local presence

Technical solution portfolio

Hydrographic Solutions

A range of seabed mapping services for fast and high-quality acquisition of hydrographic and bathymetric data.

BENEFITS

Satellite imagery analysis supports bathymetry and environmental mapping of nearshore environments

Airborne lidar bathymetry captures **fast and high-quality** shallow water bathymetry over large areas

Vessel based multi beam echo sounder acquires **accurate hydrographic data** reaching all ocean depths

Integrated **metocean observations** for accurate vertical datum reduction and charting applications

Autonomous underwater vehicles capture **precise and reliable** data for seabed surveys and environmental studies

RAMMS 2.0

Rapid Airborne Multibeam Mapping System
Enhanced 60 Hz / Machine Learning

*Compatible with
uncrewed solutions*

Fugro has used RAMMS to map more than 50,000 km² in the Americas and Europe, meeting international accuracy standards while also reducing carbon emissions by up to 80%.

*Dual
lasers*

*3x visual water clarity
depth penetration*

*Full water
column*

Reflectance imagery

Implementation: Fugro RAMMS ALB Solution

Depth Performance: 3x Secchi

Point cloud: 2.5pts/m² - IHO
Order-1a compliant

Machine Learning Processing

Topo-Bathy site investigations

Significant CO₂ emission reduction

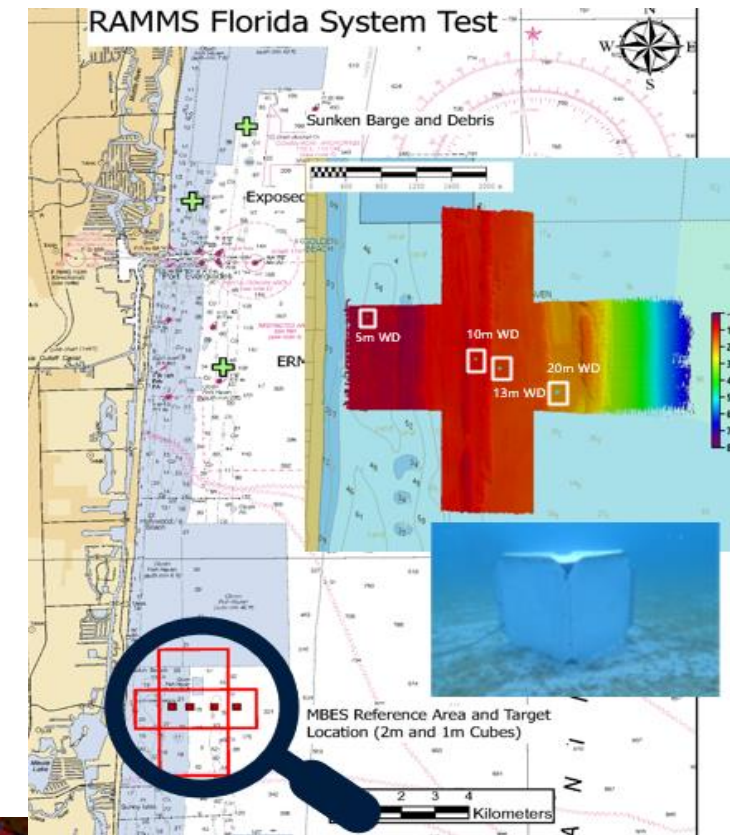

Some applications:

Nautical Charting / Habitat Mapping
Coastal zone mapping for coastal
resilience (flooding modeling, etc.)

Feature automatic detection results

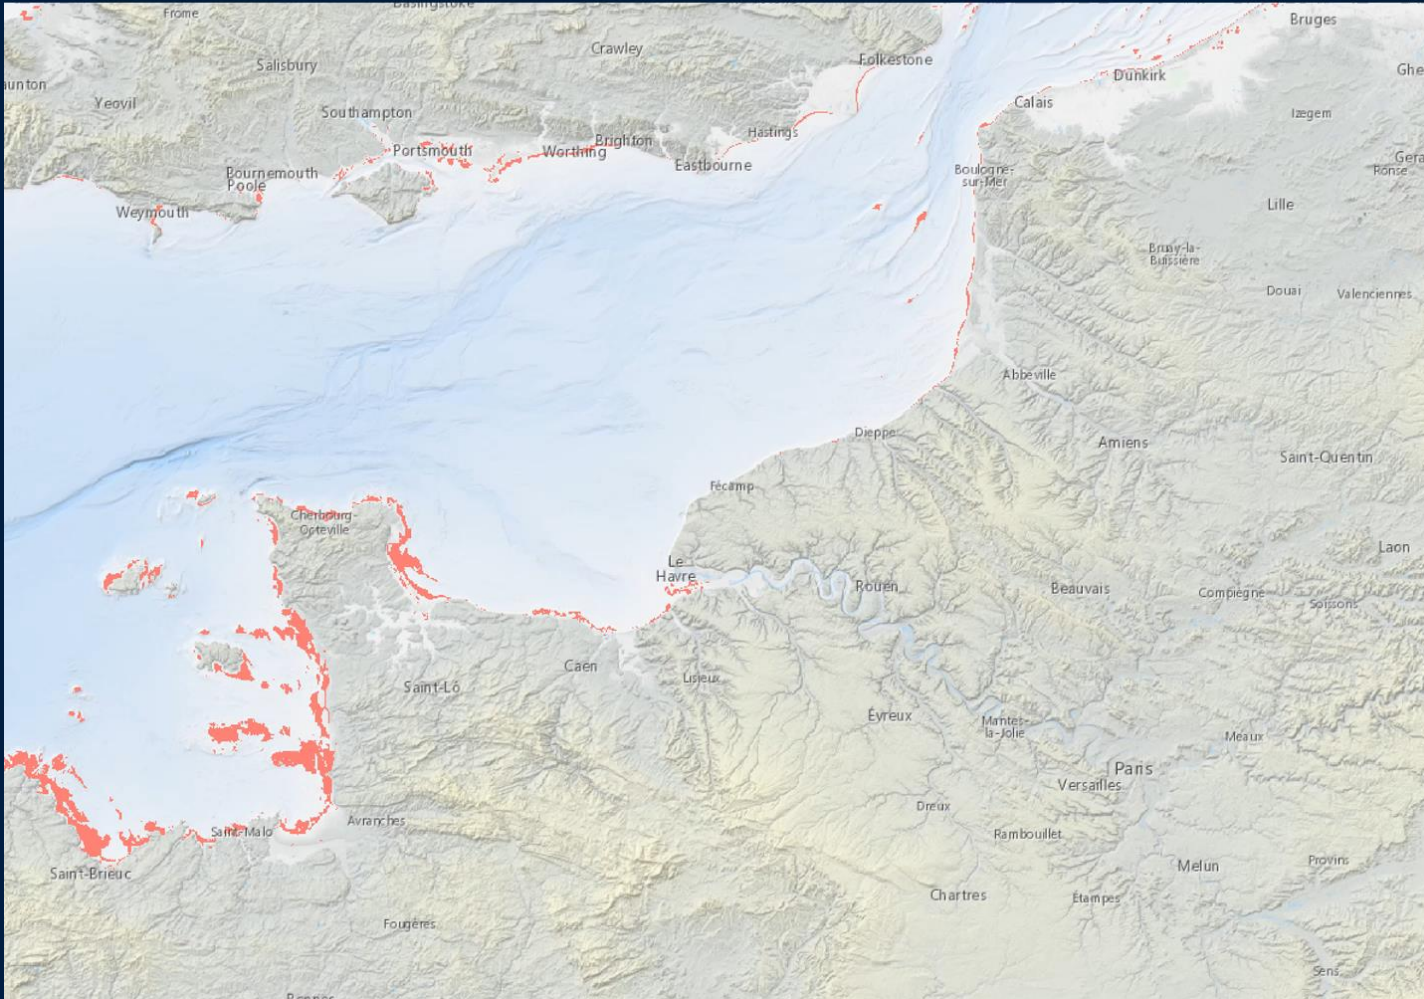

- Survey speed: varying 110-140kts
- Survey altitude: 325 AGL
- ext. depth @ 25 m

Target size	Line #	Water depth	Feature detection (pass/fail)
Cube 1 m	10001	5.8 m	✓
	10019	5.8 m	✓
	10020	5.8 m	✓
Cube 1 m	10003	9.3 m	✓

What are Fugro data enabling?

Next steps – Solution Development for Marine Habitats

Seagrass:

- Incredible ally in the fight of climate change
- Captures carbon up to 35 times faster than tropical rainforest
- Account for 10-18% of the total ocean carbon storage despite covering less than 0.1% of the seafloor
- Provides food and habitat for marine life

Fugro maps seagrass around Italy in a groundbreaking ecosystem restoration project

Project requirements Overview

- A Topographic LIDAR
- B Bathymetric LiDAR
- C Satellite Earth Observation
- D RGB-NIR imagery
- E Hyperspectral Imagery
- F MBES bathymetry
- G AUV ground truth survey
- H Gravimetry (Airborne / strapdown)
- I GNSS campaigns (Positioning)
- M Web GIS Platform
- L Data Classification service

Multiscale Mapping

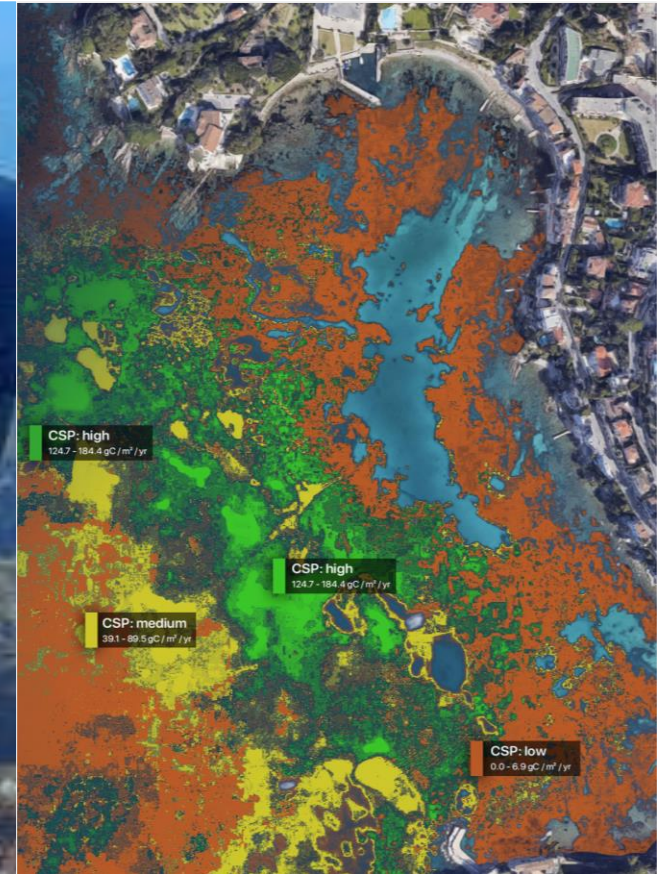

Fine/Micro –scale: in situ observer in situ diver (Scale cm)

Large-scale

Tiered approach for seagrass characterisation

Localised

Satellite EO
(Large scale monitoring)

Airborne Lidar Bathymetry /
MBES
(High resolution baseline)

ROV-mounted hyperspectral
cameras (ground-truthing)

VIRGEO
