Chart Production made easy: ArcGIS Pro Maritime

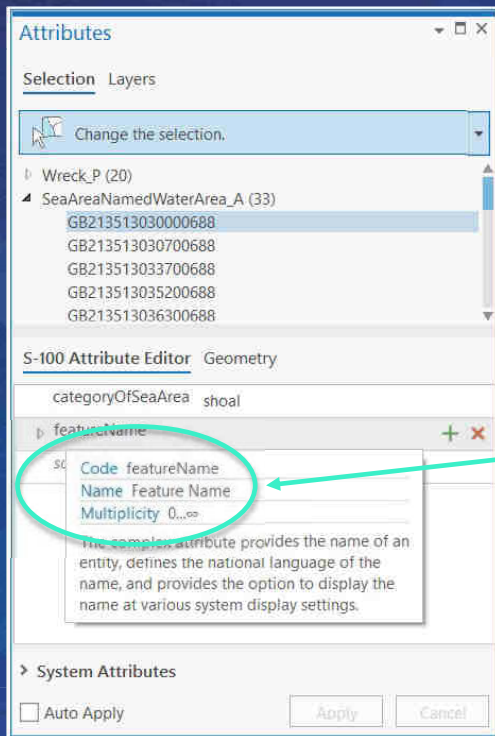

- Simplification + Low Disruption
 - Most tools remain unchanged
 - Tools and Workflows simplified.
 - Ease of adoption.
- Product Library not required
- New “Product Configuration File” parameter
 - Choose any product configuration file when you export.
 - Optional parameter
 - Simplifies support for multiple product mappings from the same data
 - S-57 and S-100

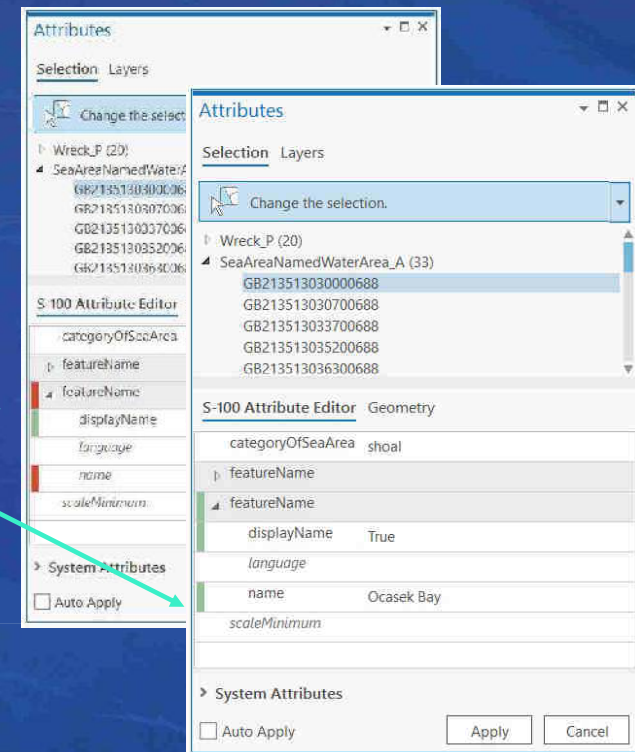

Automation across the platform

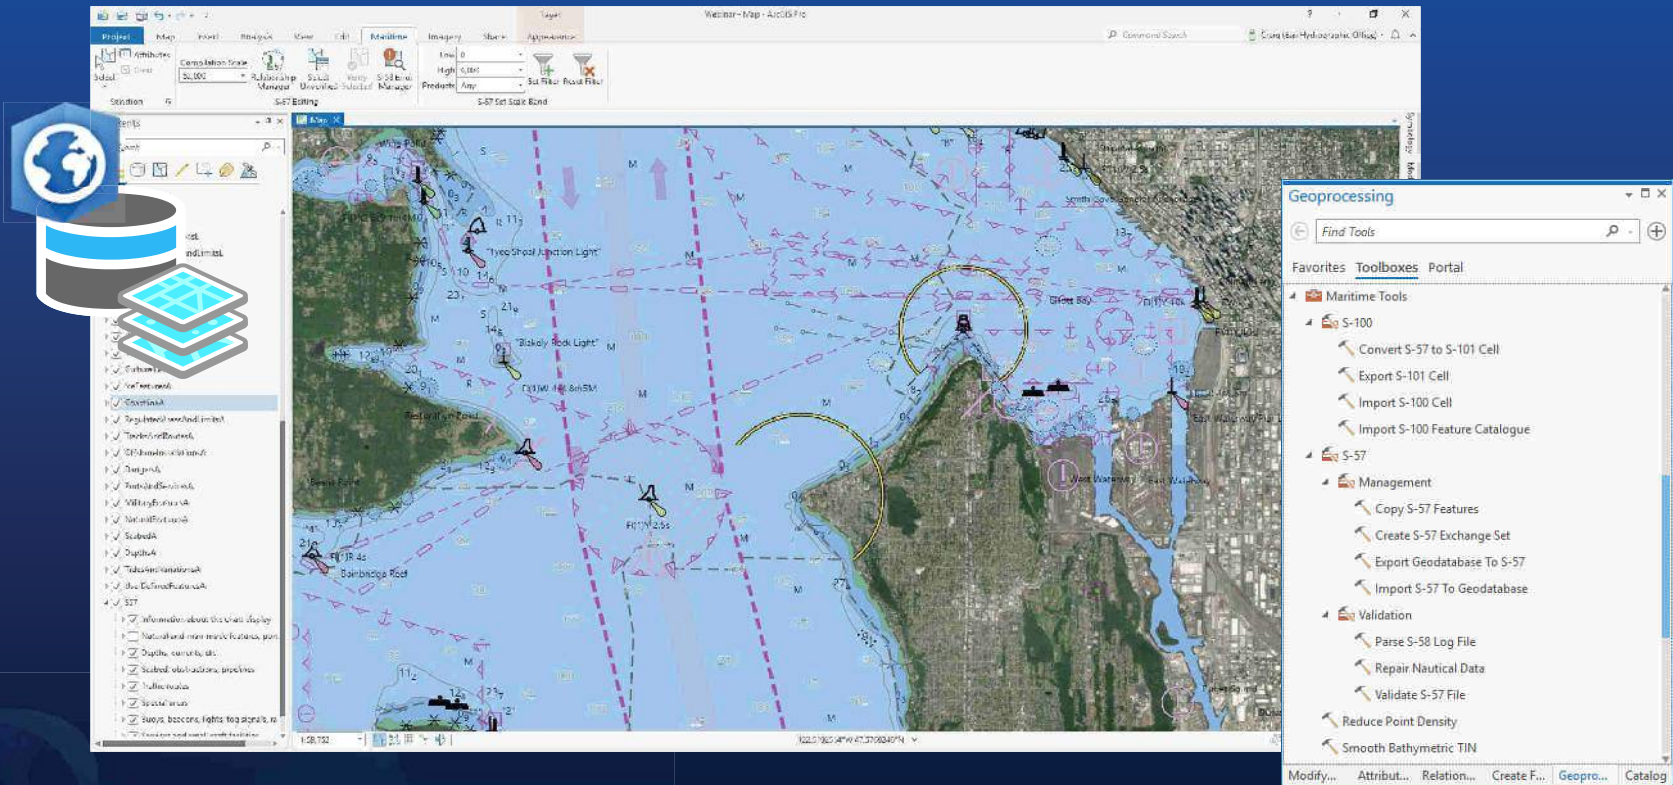

Enhanced S-100 editing tools

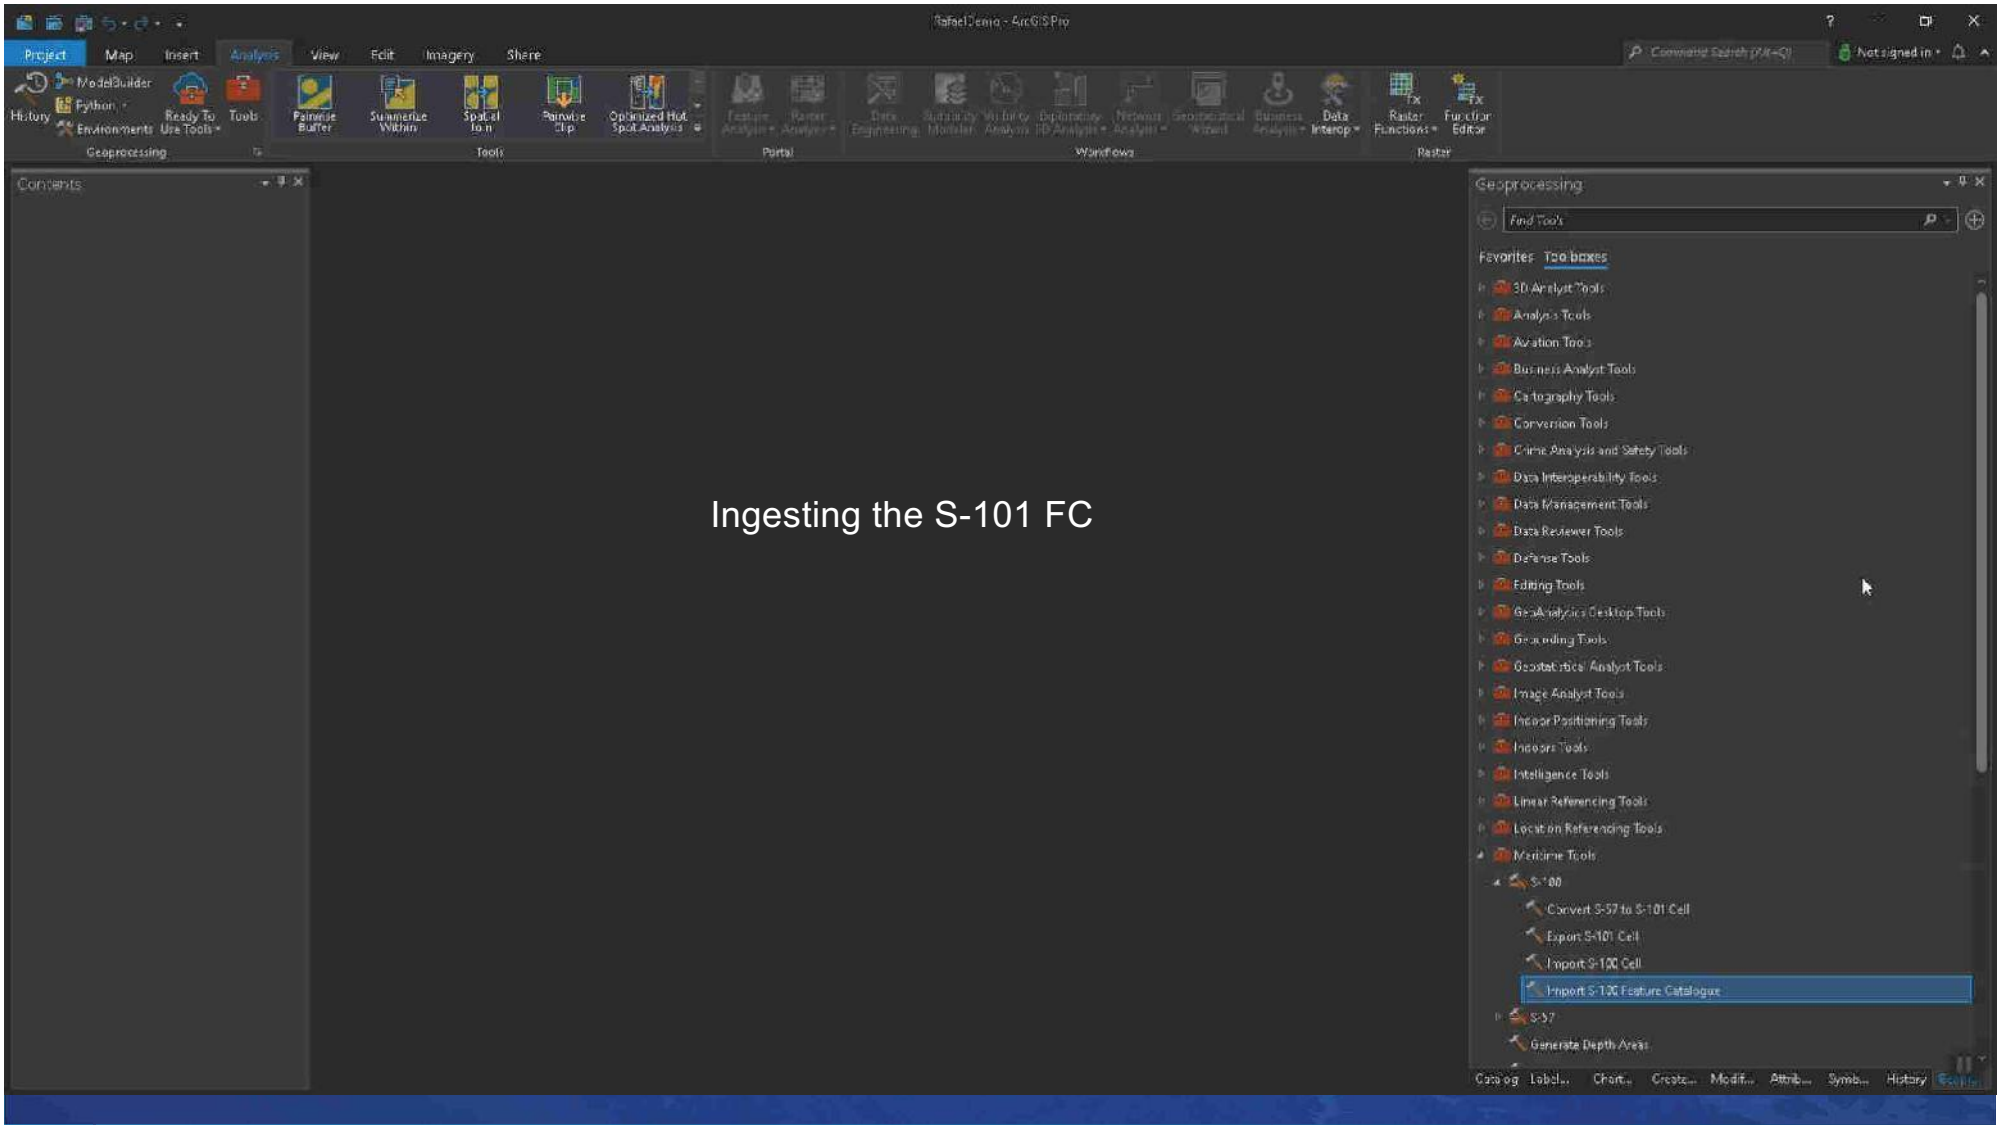

Feature Catalogue in runtime
for tooltips and validation

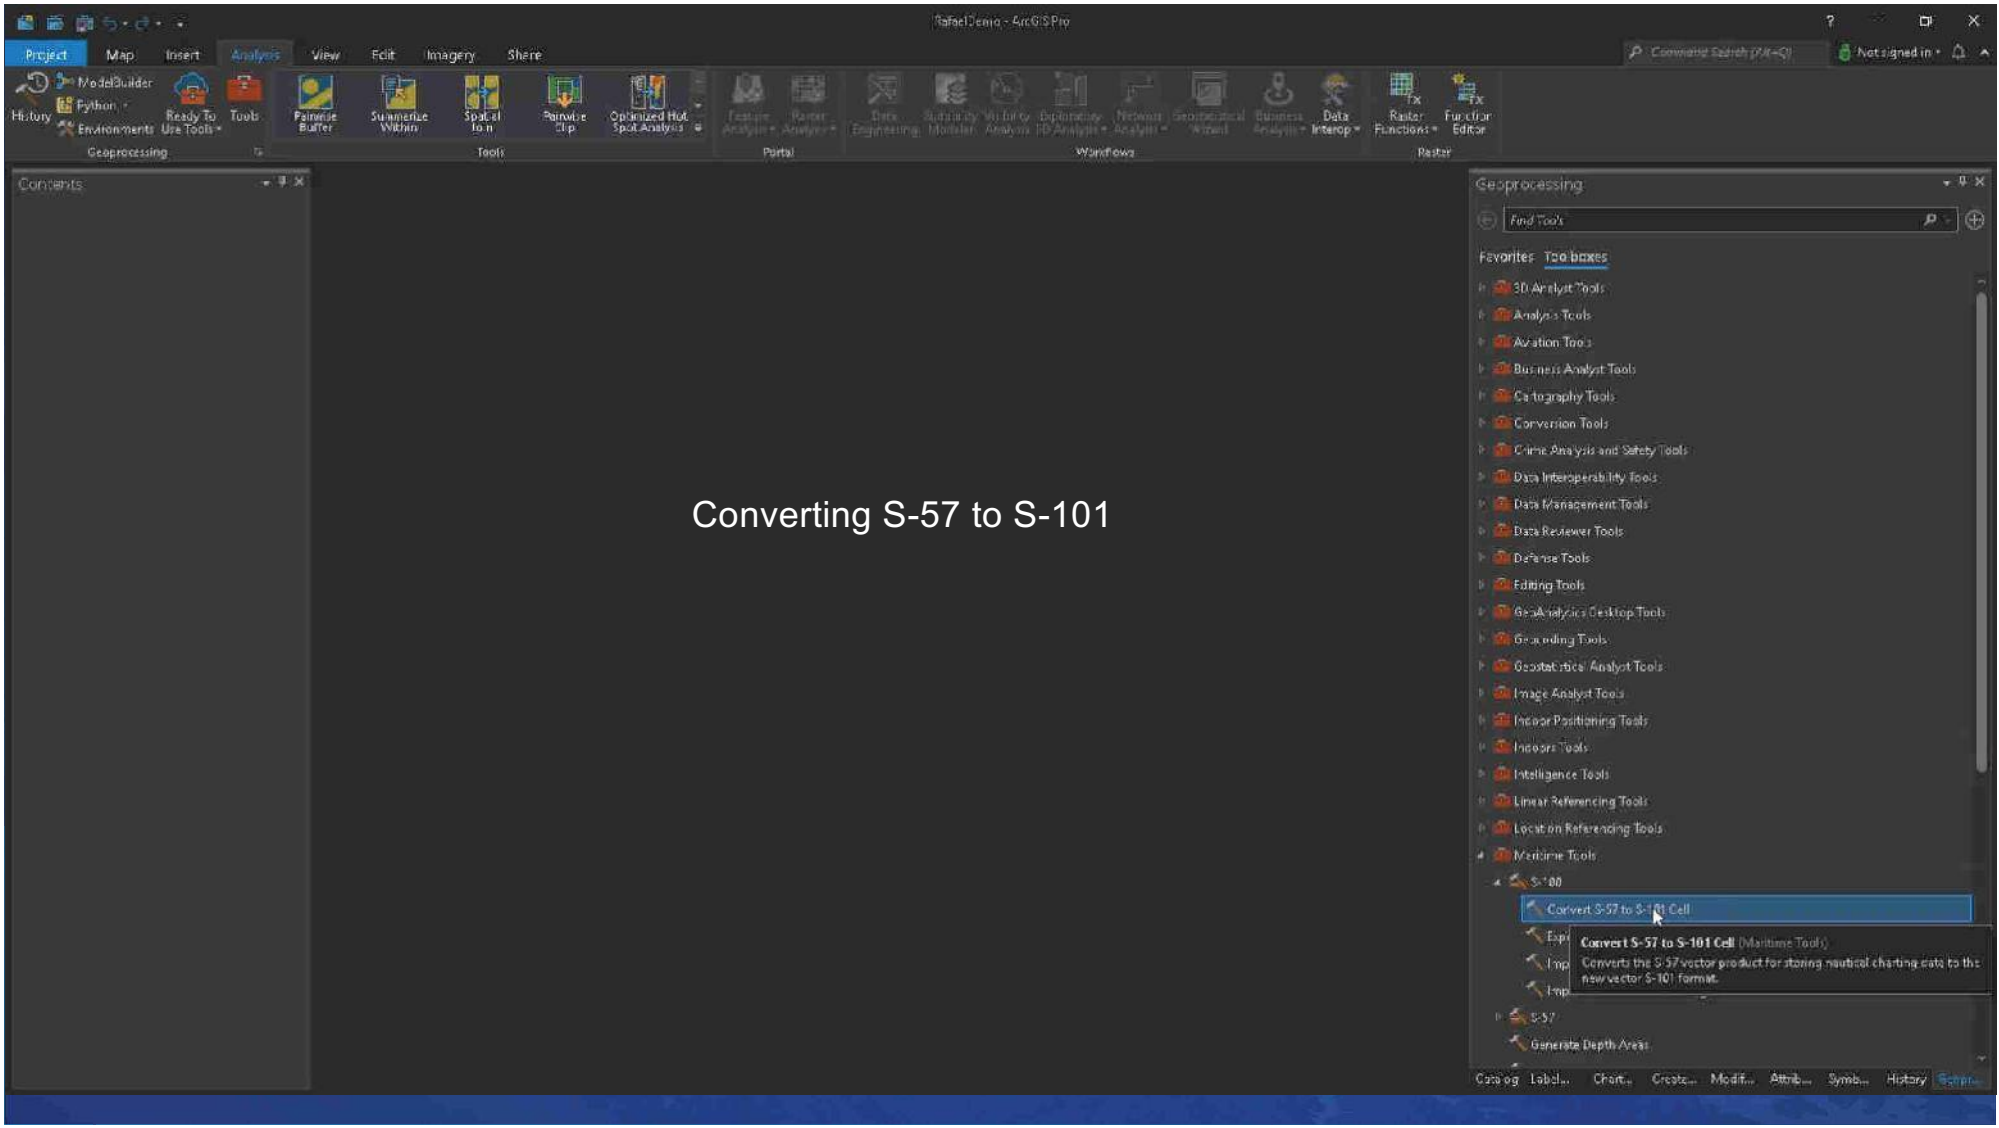

ArcGIS Maritime Production tools

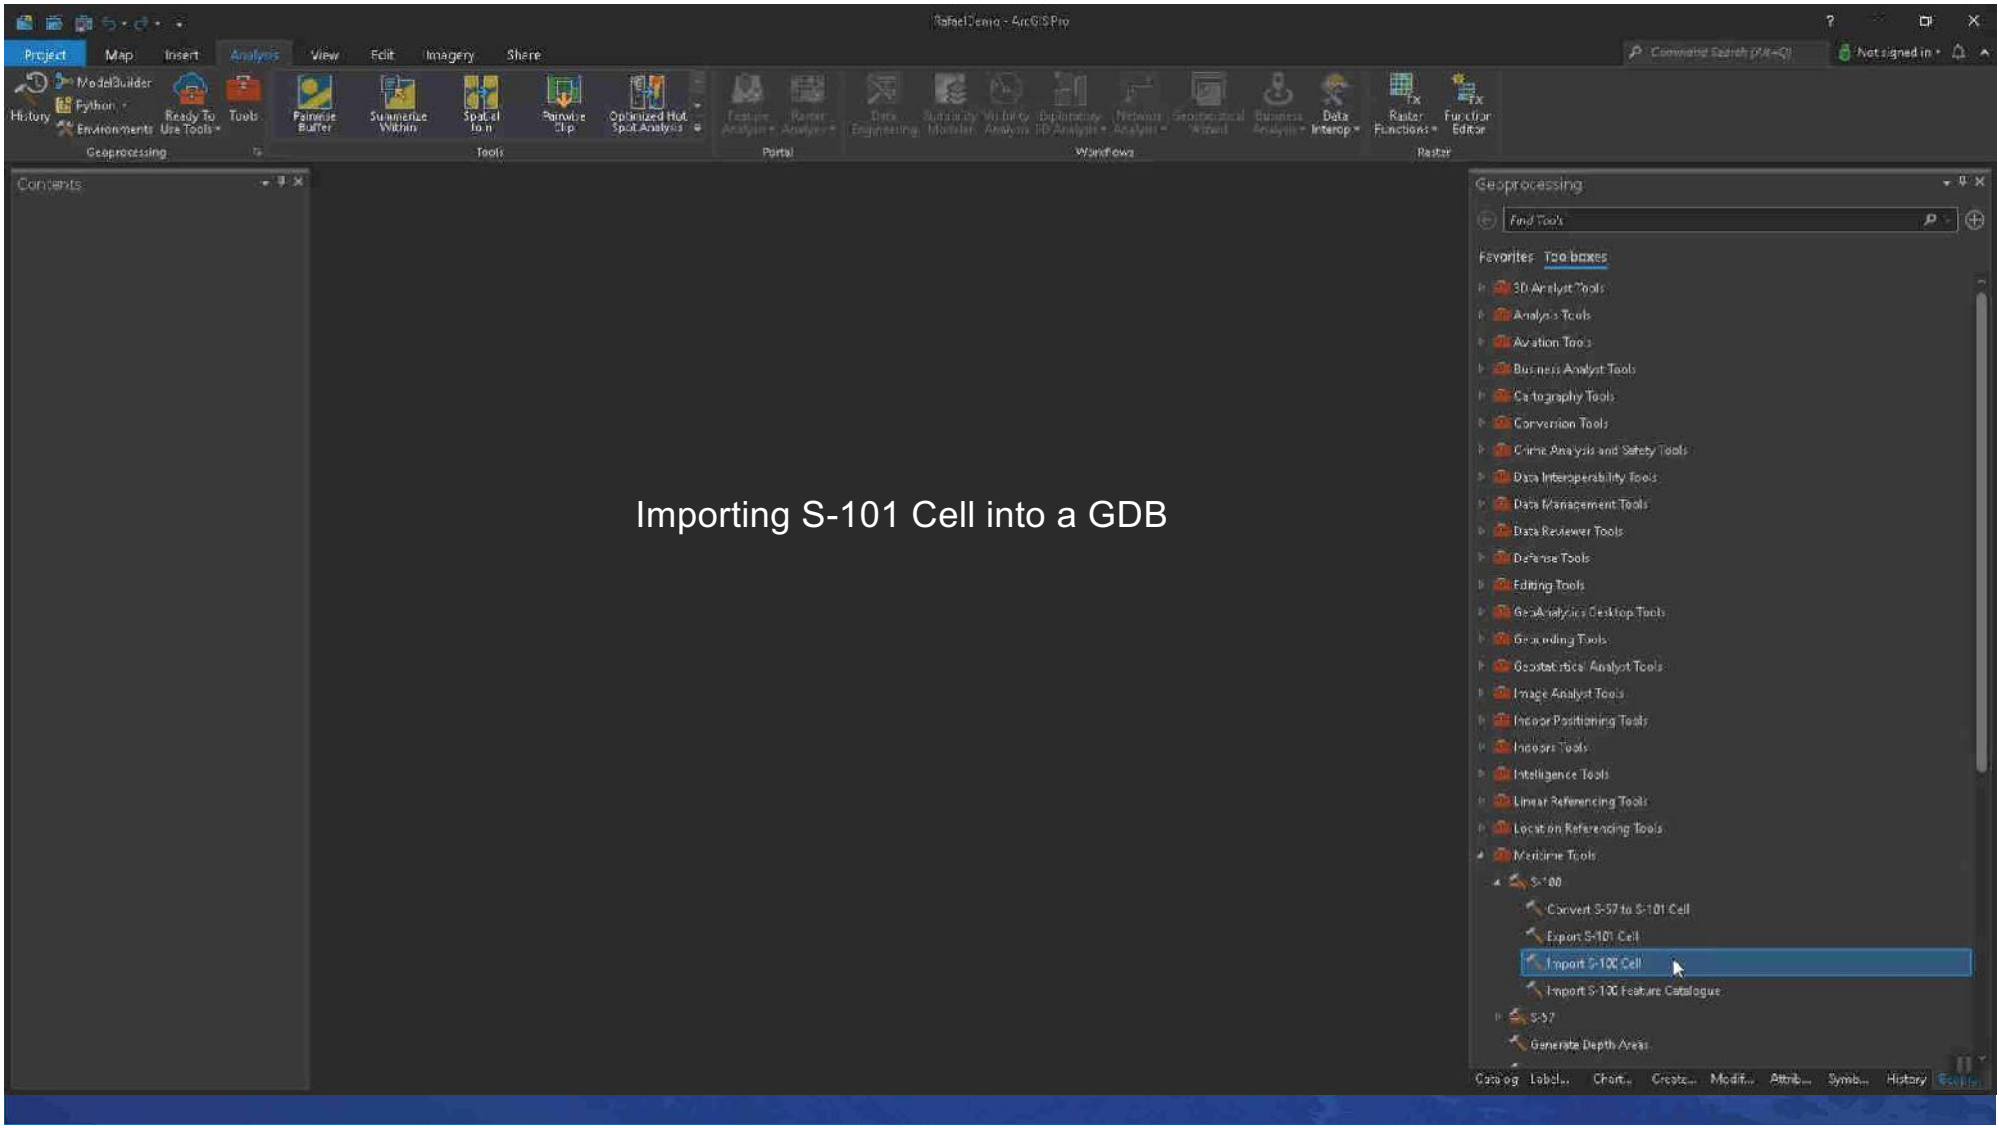

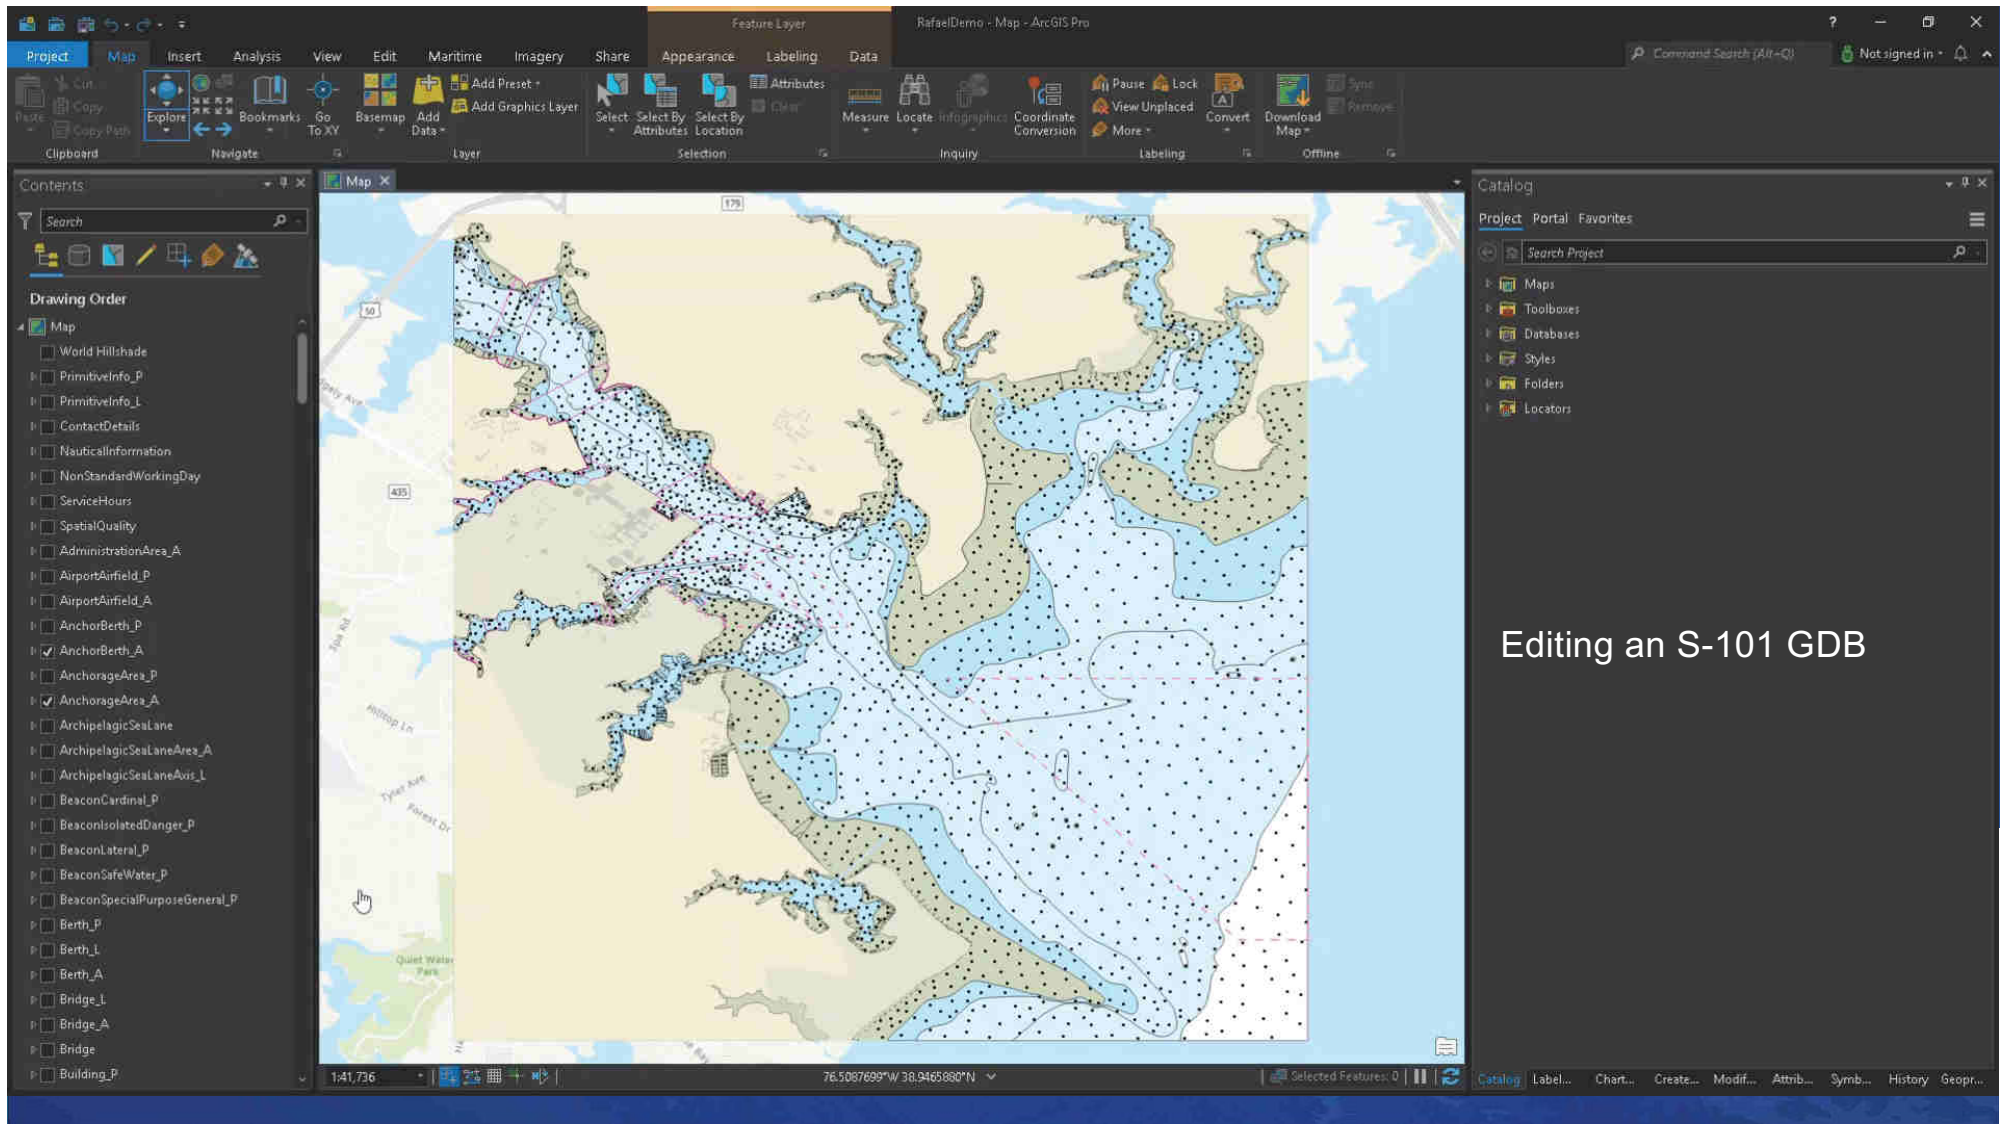

Ingesting the S-101 FC

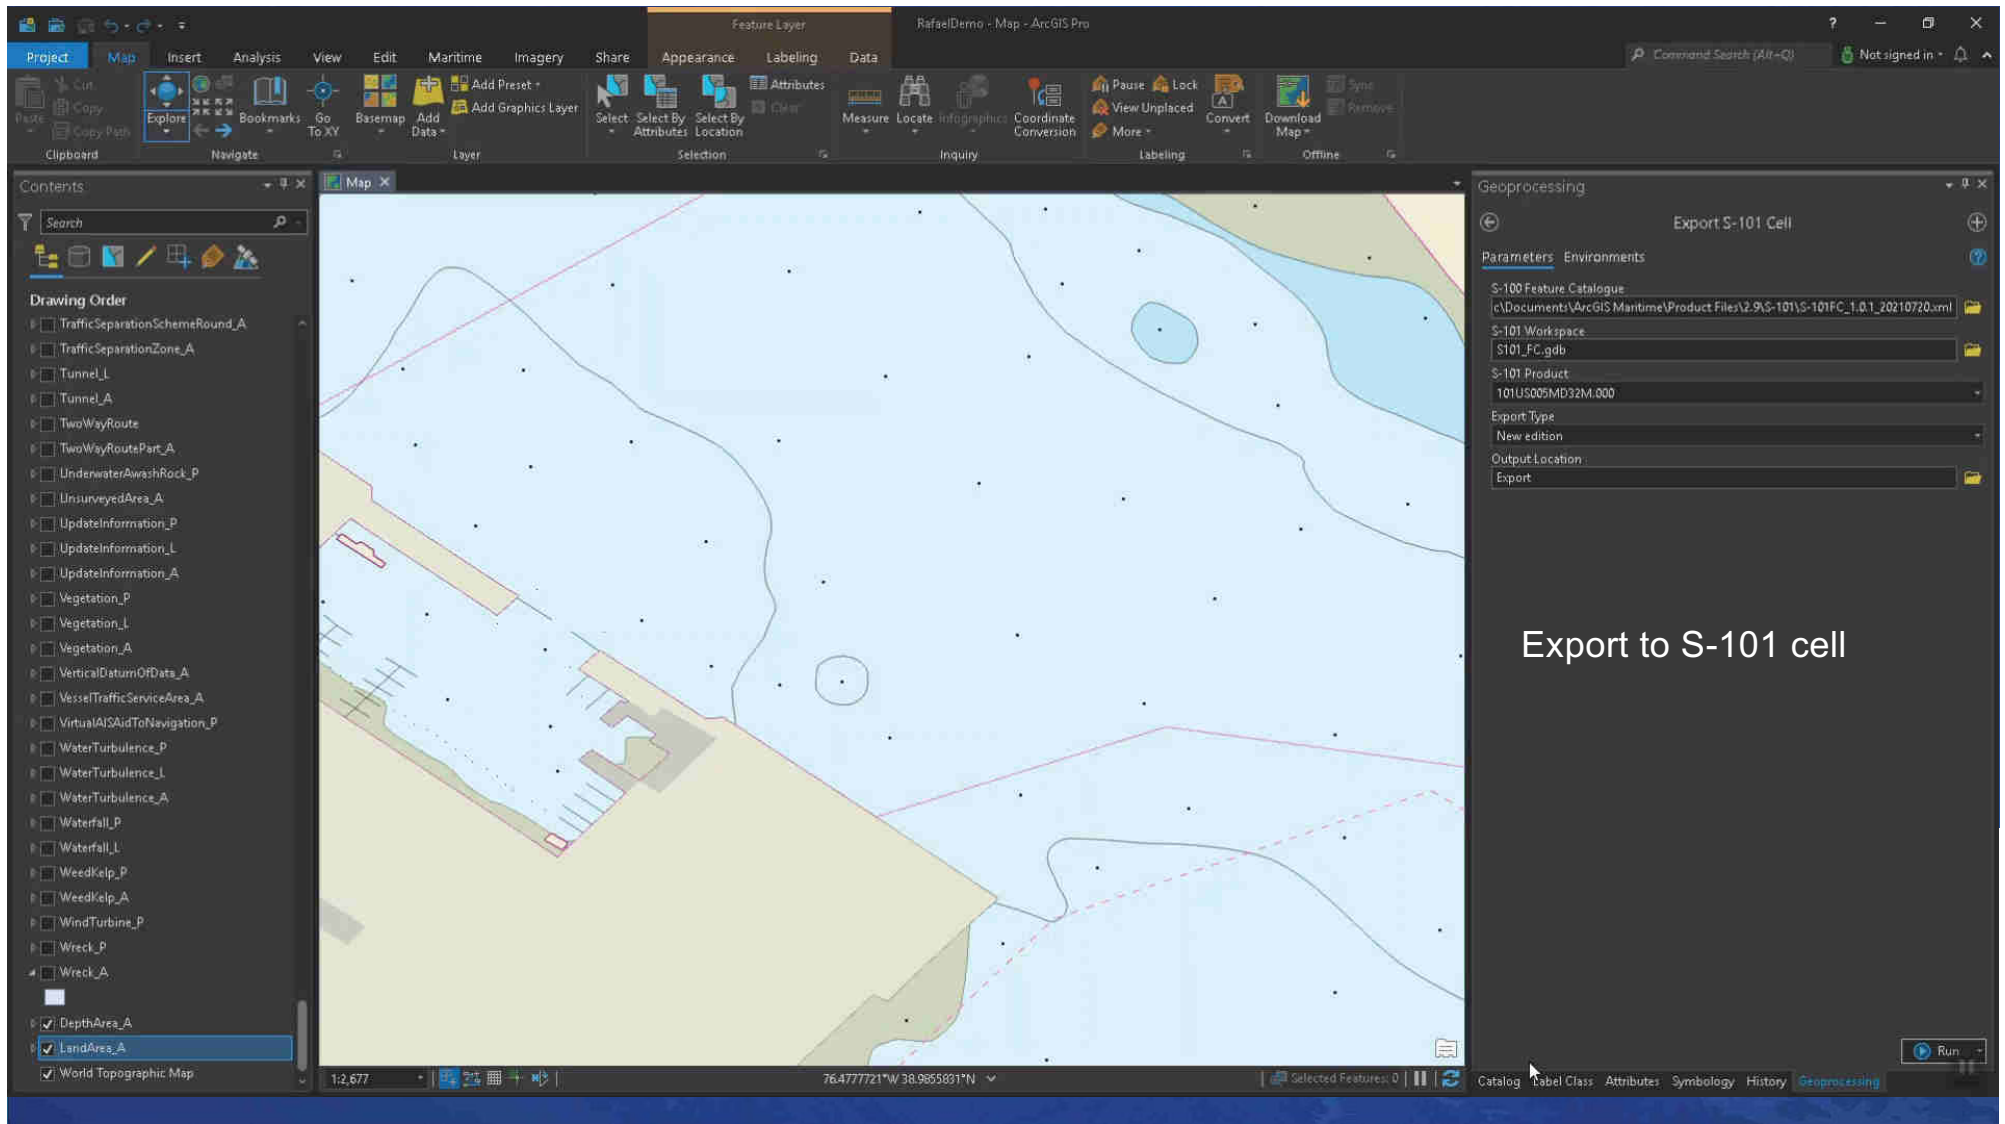

Converting S-57 to S-101

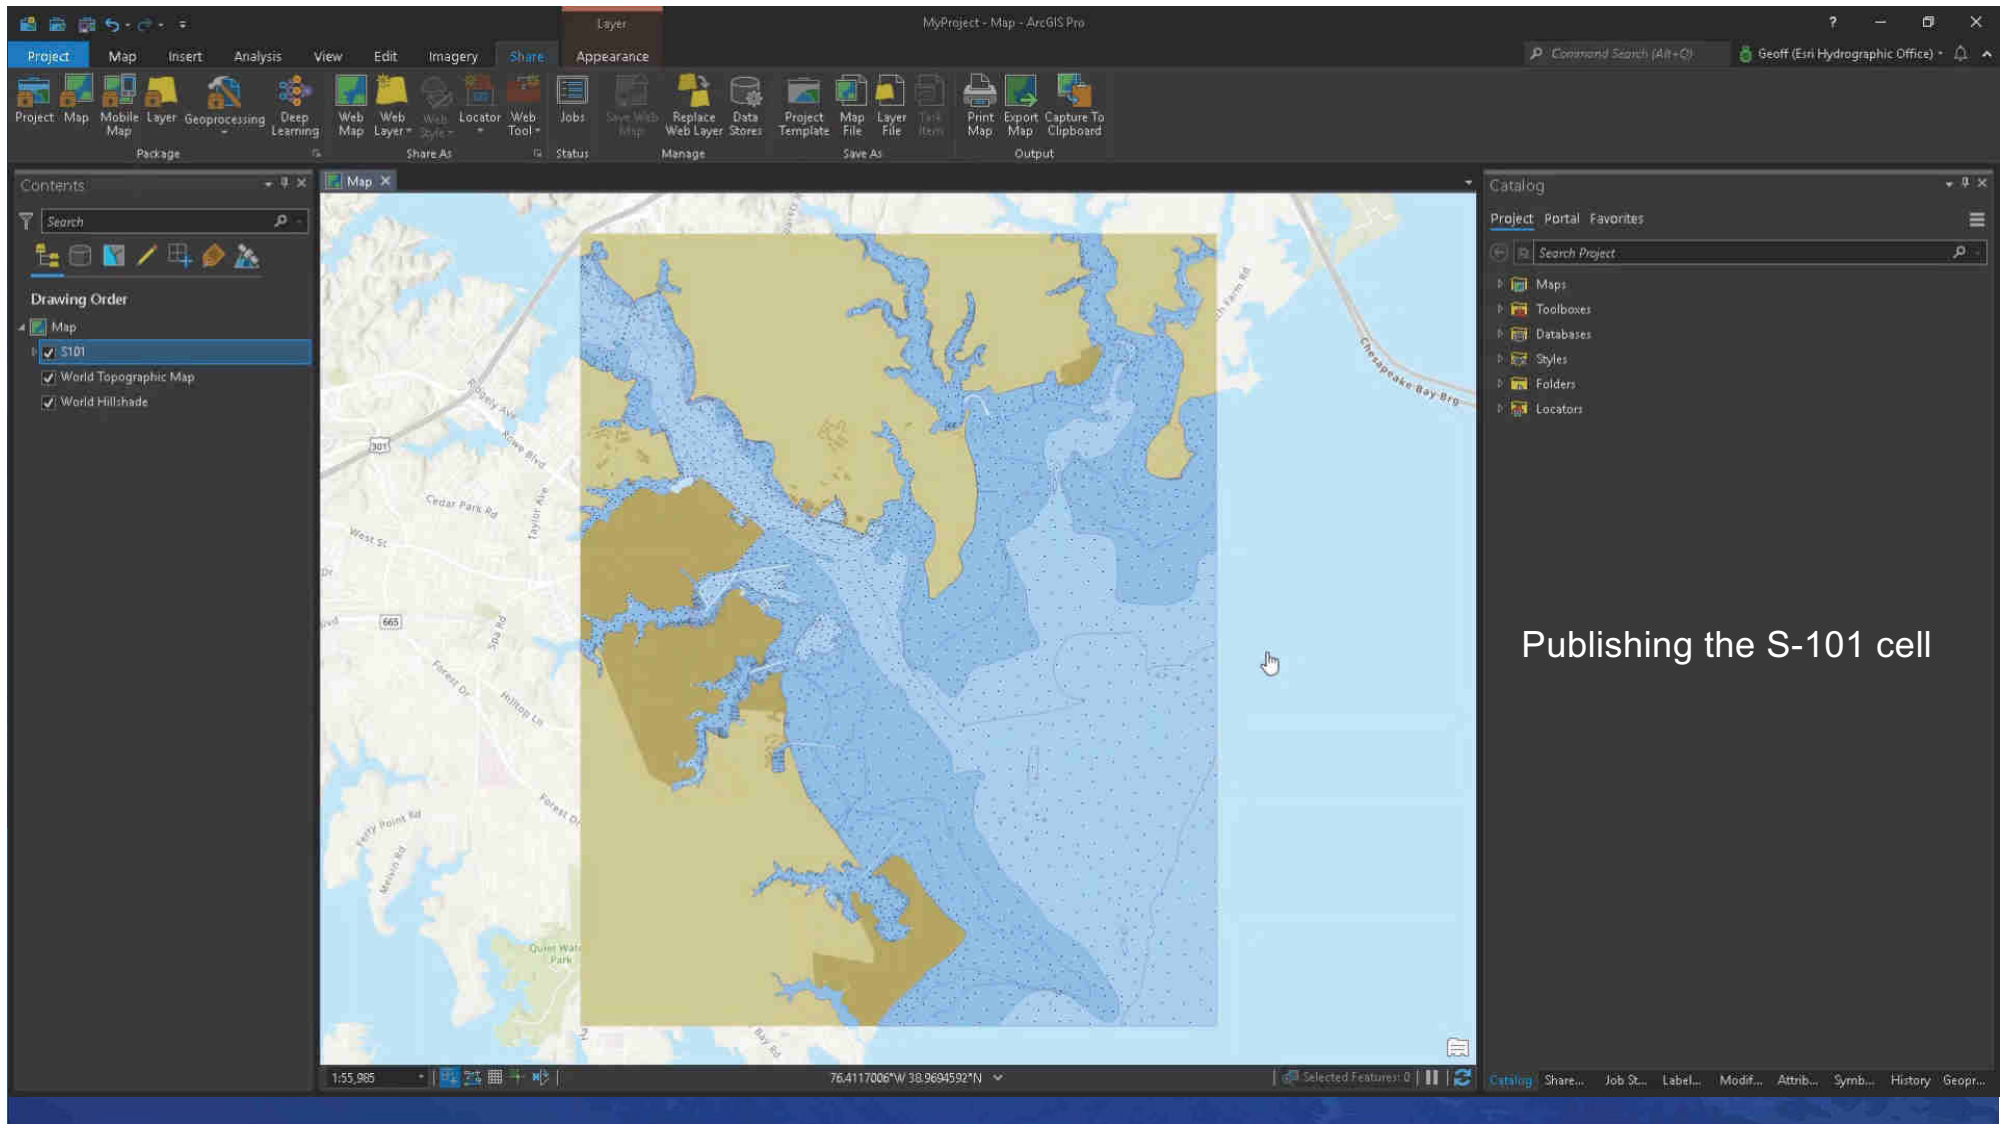

Importing S-101 Cell into a GDB

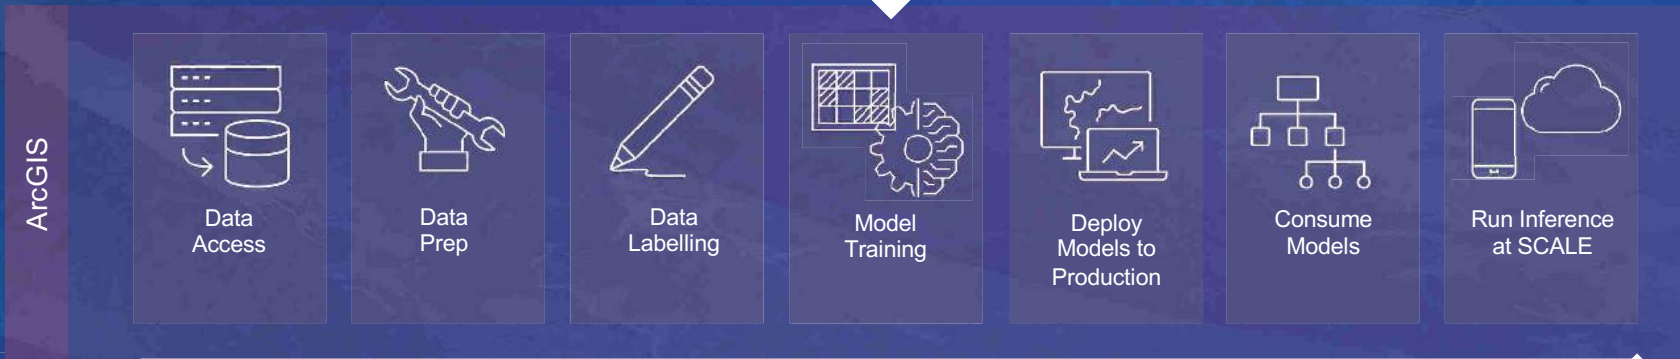

Export to S-101 cell

Publishing the S-101 cell

Hydrospatial ArcGIS is an End-to-End Geospatial AI System

Machine Learning: Wreck detection

- Detects wrecks from BAG
- Feature to Point
- Point to WRECKS in the NIS
- Export Geodatabase to S-57
- Publish as Rest/WMS ENC service

[Sample web map](#)

Ecological Marine Units

- The Group on Earth Observations (GEO), commissioned a global map of EMUs to support the wise use of ocean resources and the preservation of environmental resilience.
- EMUs are globally comprehensive, quantitatively data driven and truly 3D.
 - 37 physically and chemically distinct volumetric regions where chemical properties most likely to drive ecosystem responses
 - 52 million data points from the World Ocean Atlas (NOAA)
 - Parameters gathered every 27 Km (3D grid)
 - Seafloor morphology
 - Statistical techniques grouping results into categories
- Available to all interested MPAs
- Individuals can gauge indicators of positive or negative trends and use data to make informed decisions that preserve marine environments

<https://livingatlas.arcgis.com/emu/>

Ecological Coastal Units

- Developed by the U.S. Geological Survey (USGS) in partnership with Esri and the Marine Biodiversity Observation Network (MBON).
- Data were developed as part of a Group on Earth Observations (GEO) initiative called GEO Ecosystems (GEO ECO), and is associated with a GEO ECO task to develop global coastal ecosystems data.
- The underlying data are 4 million 1 km or shorter coastal segments.
- Attributed with values from ten ecological settings variables representing the adjacent ocean, the adjacent land, and the coastline itself.

ECOLOGICAL COASTAL UNITS

GLOBAL COASTLINE CLASSIFICATION

<https://www.esri.com/arcgis-blog/products/arcgis-living-atlas/mapping/ecus-available/>

Data allows for the visualization and query of any stretch of coastline on Earth, except for Antarctica.

Transforming paper chart production

ArcGIS Maritime server – Custom Chart Builder

2.5 Paper Chart Sales and Product Usage

a. Declining demand for paper charts

There has been an expectation that as mandatory use of ECDIS increases, demand for paper charts will diminish. This was discussed in the paper, [HSSCS-INF7, "Future demand for Paper Nautical Charts"](#), submitted to the IHO Hydrographic Services and Standards Committee (HSSC) by the Australian Hydrographic Service in 2013, shortly after the first ship types were required to implement ECDIS technology.

In fact, for at least three hydrographic offices (Spain, UK, and US), this decline started even earlier. The
