¹ Based on "Structure for National Reports to Regional Hydrographic Commissions." See http://iho.int/mtg_docs/rhc/templates/Struct_NationalReports_Eng.pdf

1. HYDROGRAPHIC OFFICE/SERVICE

This National Report provides specific information pertaining to individual U.S. products and services of primary interest to the United States/Canada Hydrographic Commission (USCHC). Three government agencies are primarily responsible for the management of U.S. domestic and international hydrographic (marine) products and services.

1.1 U.S. Government Agencies with hydrographic responsibilities in the US-Canada Region (IHO INT Region "A")

- **1.1.1** National Oceanic and Atmospheric Administration's (NOAA)² conducts hydrographic surveys and produces nautical charts and related hydrographic information within the nation's Exclusive Economic Zone (EEZ).
- **1.1.2** National Geospatial-Intelligence Agency (NGA)³ provides nautical charts and related hydrographic information globally supporting the U.S. Department of Defense and commercial mariners.
- **1.1.3** The U.S. Navy⁴ conducts oceanographic, bathymetric, and hydrographic surveys worldwide to satisfy US Navy requirements.

For more information on NOAA, NGA, and Navy hydrographic activities see IHO Publication 5.

1.2 United States Open Data Policy – Managing Information as an Asset

Access to data and services fuels entrepreneurship, innovation, and scientific discovery – all of which improve lives and contribute significantly to job creation.⁵ This premise is the foundation of the <u>U.S.</u> <u>Open data policy</u>. With the exception of some data collected and/or obtained by the U.S. Navy through bilateral agreements, the open data policy has led to the public availability of most hydrographic data, products, and services produced by U.S. Hydrographic Offices (HO's) for data downloads at no cost.

Many hydrographic data, products, and services produced by U.S. Hydrographic Offices (HO's) are available for download at no cost. NOAA provides nautical products, services, and web deliveries of digital versions of most data, which are available free to the public:

For access to survey data: <u>http://www.nauticalcharts.noaa.gov/hsd/hydrog.htm</u>

² Primarily the Office of Coast Survey.

³ Primarily Source Operations and Management Directorate, Foundation Group, Maritime Safety Office (MSO)

⁴ Primarily, Commander, Naval Meteorology and Oceanography Command (COMNAVMETOCCOM) and the Hydrographer of the Navy

For access to charting data: http://www.nauticalcharts.noaa.gov/staff/chartspubs.html

The United States is also a member of the Ocean Geospatial Consortium, "an international consortium of over 530 business, government agencies, research organizations, and universities driven to make geospatial (location) information and services FAIR-findable, accessible, interoperable, and Reusable."⁶

Figure 1: Member states within the OGP include U.S. and Canada.

2. SURVEYS

2.1 Surveys in U.S. Waters

NOAA provides nautical charts and related hydrographic information for the safe and efficient navigation of maritime commerce as well as providing basic data for engineering, scientific, and other commercial and industrial activities within the nation's 3.4 million square nautical mile EEZ and along its 95,000 miles of shoreline (Figure 2).

Figure 2: U.S EEZ

⁶ https://www.opengeospatial.org/

NOAA is in the process of re-defining how it generates and prioritizes hydrographic survey plans in federal waters. NOAA hydrographic field units or external contractors then conduct surveys to meet these priorities. Data acquired from these surveys must meet the NOS Hydrographic Survey Specifications and Deliverables, in compliance with the NOS data specification guide; NOS reviews and updates the specifications in this guide annually.

The main component of the new hydrographic survey priorities method is the "hydrographic health model." The concept of "navigational risk" serves as an underlying concept for the hydrographic health model. "Navigational risk" is the product of the likelihood of an adverse event and the consequence of that event occurring. The model incorporates likelihood parameters such as traffic density, known hazards to navigation, and reported ship groundings to estimate the likelihood of an adverse event. To estimate the consequence of an adverse event, the model incorporates parameters such as proximity to search and rescue stations, proximity to reefs or marine sanctuaries. The model also considers the necessary quality of data to support modern traffic relative to what is currently available, explicitly recognizing that the seafloor changes over time. Seafloor changeability takes into account the frequency of storms, current speed, and accumulation of marine debris, where the quality of data in highly changeable areas decreases faster than the quality of data in less changeable areas. Using historic knowledge of seafloor changeability, the model can also approximate the future quality of survey data and assess how often an area needs resurveying.

Figure 3: Hydrographic Health and Risk conceptualization

Current information about the model and survey prioritization can be found at: <u>https://nauticalcharts.noaa.gov/publications/national-hydrographic-survey-priorities.html</u>. <u>Please</u> <u>direct any inquires to https://www.nauticalcharts.noaa.gov/customer-service/assist/.</u>

FY 19 Survey Plan Highlights for USCHC region

NOAA survey plans are summarized in annual "Story Maps" available online. For the 2019 story map, please visit: <u>https://noaa.maps.arcgis.com/apps/Cascade/index.html?appid=de73e8f259e444ebaf3b24af9c0a6</u> 439. No surveys were conducted in immediate transboundary border areas of the US-CA.

2.2 Surveys outside U.S. Waters

The U.S. Navy conducts hydrographic surveys and outside the United States in international waters as well as in the territorial waters of partner nations through diplomatic channels and international agreements to enhance maritime commerce and security while supporting relationship and capacity building initiatives.

By U.S. Navy, Commander, Naval Meteorology and Oceanography Command Instruction 5510.1, "Disclosure of Information to Foreign Governments and International Organizations", it is USN's policy to treat all data collected through bi-lateral agreements as restricted from public release. Accordingly, Hydrographic Service or Port Authority of the respective country is the appropriate point of contact for inquiries or requests for data regarding any of these surveys.

2.3 U.S Hydrographic Survey Vessels

2.3.1 National Oceanic and Atmospheric Administration (NOAA)

Using four NOAA ships, six 28-foot survey boats, a research vessel, a LIDAR-capable aircraft, and private contractors, NOAA acquires hydrographic data that can update the nation's nautical charts with the accuracy and precision that is essential to maintain the public trust in navigational products.

The NOAA ship *Fairweather* is a survey vessel designed and outfitted primarily for conducting hydrographic surveys to support nautical charting however, the ship is capable of many other missions in support of NOAA programs. The ship is equipped with the latest in hydrographic survey technology –: multi-beam survey systems; high-speed, high-resolution side-scan sonar; position and orientation systems, hydrographic survey launches, and an on-board data-processing server. With increased mission space and deck machinery, the *Fairweather* can be tasked with anything from buoy operations to fisheries research cruises. The *Fairweather* primarily operates in Alaskan coastal waters.

NOAA Ship *Rainier* is one of the most modern and productive hydrographic survey platforms of its type in the world. The ship is a survey vessel designed and outfitted for conducting coastal hydrographic surveys in support of NOAA's nautical charting program. The ship supports high-

precision near-shore surveys. The ship operates off the U.S. Pacific Coast, and in Alaskan coastal waters.

Homeported in Norfolk, Virginia, NOAA Ship *Thomas Jefferson* is a hydrographic survey vessel that maps the ocean to aid maritime commerce, improve coastal resilience, and understand the marine environment.

Homeported in New Castle, New Hampshire, NOAA Ship *Ferdinand R. Hassler* is one of the newest ships in NOAA's fleet of research and survey vessels that map the ocean to aid maritime commerce, improve coastal resilience, and understand the marine environment.

Additional information on NOAA's hydrographic vessels can be found online at: https://nauticalcharts.noaa.gov/about/survey-vessels.html

2.3.2 <u>U.S. Navy</u>

The Naval Oceanographic Office (NAVOCEANO), a subordinate command of the Naval Meteorology and Oceanography Command (COMNAVMETOCCOM), currently employs five Pathfinder Class 100-meter multi-purpose survey ships to conduct oceanographic, bathymetric, and hydrographic surveys in deep-ocean and coastal waters. Each ship carries two 10-meter hydrographic survey launches (HSLs).

NAVOCEANO also maintains the Airborne Coastal Survey (ACS) capability with the Optech, Inc., "Coastal Zone Mapping and Imaging" LIDAR (CZMIL) system. A Basler BT-67, a refurbished DC-3, serves as the airborne system that carries the CZMIL system. NAVOCEANO's subordinate command, Fleet Survey Team (FST), employs various survey vehicles for survey including two 9 meter Workskiff with amidships transducer moon pools; four Teledyne Z-Boat 1800 Unmanned Surface Vessels (USV) equipped with multi-beam; two Iver3 580 Unmanned Underwater Vehicles fixed with Bathymetric Interferometric Side Scan Sonar rapid littoral survey vehicles (RLSVs) (personal water craft fitted with a single beam echo sounder and side scan sonar). C-130 aircraft provide rapid deployment transportation capability for all FST craft. FST also maintains a year round stand by "Fly-Away Team" consisting of four personnel and survey gear to outfit boats of opportunity. This capability enhances standard Navy survey requirements and provides capacity to maintain navigable approach corridors in support of humanitarian aid and disaster relief.

3. NEW CHARTS AND UPDATES

3.1 National Charting Plan (NCP)⁷ Released

⁷ https://nauticalcharts.noaa.gov/news/final-national-charting-plan.html

On November 1, 2017, NOAA released the National Charting Plan, a strategy to improve NOAA nautical chart coverage, products, and distribution. It describes the evolving state of marine navigation and nautical chart production, and outlines actions that will provide the customer with a suite of products that are more useful, up-to-date, and with which are safer to navigate. It is not a plan for the maintenance of individual charts, but a strategy to improve all charts.

The NCP briefly describes the evolving state of marine navigation, data collection, and chart compilation and explains how changes in technology will affect both the raster and vector NOAA marine chart suites. The plan also describes some of the steps that NOAA will be taking to improve our chart products in the short term, including changes to chart formats, scales, data compilation, as well as some considerations on the future of NOAA navigational products beyond the short term. The goal of NOAA's Office of Coast Survey is to deliver products that are more useful, more up-to-date, and safer to navigate with, and at the same time optimize the use of the government resources employed to maintain the navigational products and services that are increasingly required to support higher levels of precision and timeliness.

3.2 Electronic Nautical Charts (ENC)

The NOAA ENC is a vector database of chart features built to the International Hydrographic Organization's (IHO) S-57 standard. NOAA's Office of Coast Survey, as the U.S. national hydrographic office, is exclusively responsible for production and authorization of NOAA ENC data in U.S. waters. New map services are in place to allow others simple access to real-time data streams, creating opportunities for operational coastal awareness via interactive map viewers. NOAA ENC Direct to GIS website (<u>http://www.nauticalcharts.noaa.gov/csdl/ctp/encdirect_new.htm</u>) allows users to display, query and download all available U.S. ENC data in a variety of GIS/CAD formats, using Internet mapping technology. The NOAA NowCOAST web site (<u>http://nowcoast.noaa.gov</u>) is an example of the possibilities created by delivering real-time data for broad customer use.

NOAA ENCs are available through the following third party channels:

Company \diamond	Distributor Type*
Baker Lyman and Co, Inc	CED
C-MAP Norway A/S	CEVAD
ChartWorld	CEVAD
National Geospatial-Intelligence Agency (NGA)	CED
Creative Map Corp.	CED
Maris AS	CED
Primar	CED
Transas Ltd.	CEVAD
Titafin LLC (Subsidiary of Baker Lyman and Co, Inc)	CED
United Kingdom Hydrographic Office	CED
CherSoft	CED

Table 3-2 ENC Distributors and type

* CED - Certified NOAA ENC® Distributor - Provides NOAA ENC® data.

CEVAD - Certified NOAA ENC® Value Added Distributor - Provides NOAA ENC® data and reformatted System ENC (SENC) data.

3.3 Raster Navigational Charts (RNC) & Electronic Navigational Charts (ENC) Distribution

NOAA produces 51 RNC and ENC charts in the area of Atlantic Ocean and Great Lakes. NOAA also produces several other charts in the Pacific Ocean and the Arctic that lie within the USCHC region. NOAA is in the process of rescheming its ENCs in both the North Atlantic and Great Lakes, having recently published reschemed ENCs in Lake Superior. As of April 2014, NOAA no longer produces lithographic paper charts with traditional print cycles for new editions. All paper charts are fully updated and available for download as Print-on-Demand (POD) products, or in paper form from one of 17 NOAA-certified chart printing agents. (see Annex A for NOAA certified chart printing agents).

U.S. ENCs are available as free downloads from the internet. Mariners who wish to download NOAA ENCs directly and use the data to fuel ECDIS or ECS may do so. ENCs, including newly created NGA ENCs, are distributed directly from NOAA on the web at <u>www.nauticalcharts.noaa.gov</u>. They are also available through the International Center for ENC's Distributors, <u>http://www.ic-enc.org/Pages/Current%20IC-ENC%20VARs.aspx</u>.

3.3.1 ENCs in the Great Lakes

Traditionally, Raster Nautical Charts (RNCs) were maintained before for the production of ENCs. These charts also offered more coverage than the ENCs. With technological advances, it has become operationally advantageous to maintain ENC databases and update RNCs thereafter. NOAA now maintains the NOAA ENC suite as the premiere product. The Great Lakes ENC suite has equivalent coverage to the RNCs.

3.4 Digital Nautical Chart (DNC)

The U.S. produces many DNCs in the USCHC waters. The DNC, produced by NGA, is an unclassified, vector-based, digital database containing maritime significant features essential for safe marine navigation.

The DNC uses the Vector Product Format, which is a NATO standard for digital military map and chart data. Additional details can be located at: <u>http://msi.nga.mil/NGAPortal/DNC.portal.</u>

27 25 26 18 17 13 15 16 14

DNC consists of libraries in a variety of scales for complete worldwide coverage.

Figure 7: DNC Region A Coverage

DNCs consist of libraries in a variety of scales for complete worldwide coverage. These libraries are maintained with new source information from the U.S. and primary charting authorities (host nations). DNC libraries are considered Limited Distribution products and are not available for public sale or download except for those that are within U.S. territorial waters or in areas where source data restrictions allow them to be released. However, DNC data is shared with host nations for coverage in their territorial waters through formal bilateral exchange agreements

Within USCHC waters, the Canadian Department of National Defense is a co-producer of DNC across regions 18, 26, 27, and 28 (see table 2) where they maintain approximately 78% of the total coverage. This arrangement has been in place since 2004 and is covered under a formal co-production Memorandum of Understanding (MOU). NGA DNC's® 018, 026, 027, and 028 are produced in partnership with Canadian Forces Mapping and Charting Establishment Hydrographic Services Office (Esquimalt). Initial data collection of the database is from a portfolio of

approximately 5,000 nautical charts that will ultimately provide global marine navigation between 84° North latitude and 81° South latitude and supports a variety of Geographic Information System applications.

The Digital Nautical Chart® database consist of 29 Digital Nautical Chart® geographic regions providing a complete worldwide footprint containing over 5,000 charts of varying scales between 84° North latitude and 81° South latitude and supports a variety of Geographic Information System applications. DNC's® 18, 26, 27, and 28 are produced in partnership with Canadian Forces Mapping and Charting Establishment Hydrographic Services Office (Esquimalt). Current portfolio of DNC libraries originating from the Canadian Forces mapping and Charting Establishment Hydrographic Services Offices (Esquimalt) are maintained with Canadian Notice to Mariners and applied on a four week cycle. Digital Nautical Chart® portrays selected significant navigational features in a format suitable for computerized navigation and Geographic Information System (GIS) applications. Digital Nautical Chart® is produced in the standard Vector Product Format (VPF) allowing for modeling real world features in digital geographic databases. The database uses a table based geo-relational data model and supports GIS applications such as mission planning, command and control, and situational awareness. Future plans are to transition DNC data to ENC brokered partner data in Canadian and U.S. waters.

DNC Geo. Region	Total Library Coverage
18	240
26	113
27	27
28	65
TOTAL	445

 Table 2: DNCs produced in partnership with Canadian Forces Mapping and Charting Establishment Hydrographic Services Office

3.5 Raster Navigational Charts (RNC)

The NOAA RNC® are geo-referenced, digital images of NOAA navigational charts. Because the images are geo-referenced, the end user can display a vessel's position on the chart image if a computer-based navigation system is connected to a global positioning system (GPS). RNCs, developed under the IHO S-61 product specification, are unique to NOAA. NGA does not produce RNCs.

3.6 International (INT) Charts

The NOAA does <u>not</u> produce INT charts but does offer "INT Chart Equivalents." NGA does have INT chart responsibilities within USCHC region. The U.S. is responsible for eight (8) INT chart equivalents within region A. The listing is included in the table below.

INT Region	INT Chart Number	Producer	National Chart Number	INT TITL E	Scale	New Edition Year
А	403	US	108	South East Coast of North America including the Bahamas and Greater Antilles	3,500,000	1994
А	801	US	501	West Coast of North America (Mexican Border to Dixon Entrance)	3,500,000	2009
А	802	US	502	West Coast of North America (United States to Mexico)	3,500,000	1983
А	809	US	504	Hawaiian Islands	3,500,000	1983
А	810	US	500	West Coast of North America (Dixon Entrance to Unimak Pass)	3,500,000	2015
А	811	US	503	Mexico to Ecuador	3,500,000	1996
А	814	US	514	Bering Sea (Northern Part)	3,500,000	2015
А	813	US	513	Bering Sea (Southern Part)	3,500,000	2015

Table 3: INT Chart Equivalents in the USCHC Region

4. NEW PUBLICATIONS AND UPDATES

New Publications

None for comment.

Updated Publications

The American Practical Navigator, first published in 1802 describes in detail the principles and factors of navigation, including piloting, electronic navigation, celestial navigation, mathematics, safety, oceanography and meteorology. It also contains various tables used in typical navigational calculations and solutions, including the formulas used to derive the tabular data. The 2017 edition of the American Practical Navigator returns to a two-volume format, which can be downloaded as complete PDF documents from the following website:

https://msi.nga.mil/NGAPortal/MSI.portal?_nfpb=true&_pageLabel=msi_portal_page_62&pubCode=000 2

United States Coast Pilot

The *United States Coast Pilot*® consists of a series of nine regionallyfocused nautical books that cover a variety of useful information important to navigators for coastal and intra-coastal waters and the U.S. Great Lakes. Coast Pilots 6, 7, 8, and 9 provide information for the USCHC region. U.S. Coast Pilot now offers completely updated publications every week. U.S. Coast Pilots can be downloaded at:

https://nauticalcharts.noaa.gov/publications/coast-pilot/index.html.

Coast Pilot	Coverage	Current Year (Edition)		
#1	Atlantic Coast: Eastport ME to	2019 49 th (online version is updated and		
	Cape Cod, MA	current as of Feb. 9, 2020)		
		Next edition: tbd		
#6	Great Lakes	2019 49 th edition (online version is		
		updated and current as of February 9,		
		2020)		
		Next edition:		
#7	Pacific Coast	2019 (51 st)		
		(online version is updated and current as		
		of February 9, 2020)		
		Next edition: May 2020		
#8	Alaska: Dixon Entrance to Cape	2019 (41st)		
	Spencer	(online version is updated and current as		
		of February 9, 2020)		
		Next edition: July 2020		
#9	Alaska: Cape Spencer to	2019 (37 th)		
	Beaufort Sea	(online version is updated and current as		
		of February 9, 2020)		
		Next edition: August 2020		

Sailing Directions

Produced and maintained by NGA, Sailing Directions consists of useful information important to navigators of coastal waters. Information for the USCHC region is contained in Publications 140- North Atlantic Ocean and Adjacent Seas, 145 – Nova Scotia and the St. Lawrence, 146 – Newfoundland, Labrador, and Hudson Bay, and 154 – British Columbia. Digital updates can be downloaded from NGA at http://msi.nga.mil/NGAPortal/MSI.portal.

World Port Index

World Port Index (Pub150) is a publication maintained by NGA. It contains the location and physical characteristics as well as the facilities and services offered by major ports and terminals worldwide.

Digital updates are available to the public and posted at the NGA Maritime Safety website, at <u>http://msi.nga.mil/NGAPortal/MSI.portal</u>

List of Lights, Radio Aids and Fog Signals

The NGA *List of Lights, Radio Aids and Fog Signals* and their digital updates are available to the public and posted at the NGA Maritime Safety website, at http://msi.nga.mil/NGAPortal/MSI.portal . Each volume corresponds to a defined geographic region, and contains more complete information about the navigational aids than can be conveniently shown on nautical charts. New editions are published annually for every volume. The uncorrected publications can be viewed or downloaded in their entirety as PDF files. Corrections to the List of Lights are published in the Notice to Mariners. Publications 110 – Greenland, the East Coasts of North and South America and 111 – The West Coasts of North and South America.

5. MARITIME SAFETY INFORMATION (MSI)

5.1 Existing infrastructure for transmission

Maritime Safety Information (MSI) is described as navigational and meteorological warnings, meteorological forecasts and other urgent safety-related messages broadcast to ships in accordance with the International Convention for the Safety of Life at Sea, 1974, as amended. The U.S. Coast Guard issues Notices to Mariners for NOAA charts, while NGA issues Notices to Mariners for NGA charts in the USCHC region.

Notice to Mariners

The U.S. Notice to Mariners provides timely Marine Safety Information (MSI) for the correction of all U.S. Government navigation charts and publications from a wide variety of sources, both foreign and domestic. Information published in Notice to Mariners provide for the correction of unclassified nautical charts, the unclassified NGA/DLIS Catalog of Hydrographic Products, United States Coast Pilots, NGA List of Lights, U.S. Coast Guard (USCG) Light Lists, and other related nautical publications produced by NGA, National Ocean Service (NOS), and the USCG. The U.S. Notice to Mariners corrects NGA and NOS charts using information collected from many sources, among them the Local Notice to Mariners published by the nine U.S. Coast Guard Districts. The U.S. Notice to Mariners are posted at the NGA Maritime Safety website at

http://msi.nga.mil/NGAPortal/MSI.portal .

5.2 Navigation Warnings

Figure 5: Radio Navigational Warning Systems

As the NAVAREA IV and XII Coordinator, NGA issues the navigational warnings for these areas and are broadcast and uploaded to http://msi.nga.mil/NGAPortal/MSI.portal. NGA requests the assistance of all member states within the these two NAVAREA regions to relay pertinent maritime safety information for promulgation to navsafety@nga.mil.

The International Maritime Organization has designated NAVTEX as the primary means for transmitting coastal urgent marine safety for instantly distributing maritime navigational warnings, weather forecasts and warnings, search and rescue notices and similar information to ships worldwide. Eleven NAVTEX stations are operational in NAVAREA IV and XII and is broadcasted from Coast Guard facilities in Cape Cod, Chesapeake VA, Savannah GA, Miami FL, New Orleans LA, San Juan PR, Cambria CA, Pt. Reyes CA, Astoria OR, Kodiak AK, Honolulu HI, and Guam. The broadcast coverage area for NAVTEX stations vary between 200 and 500 nautical miles from shore.

The NAVAREA coordinator is the authority charged with coordinating, collating and issuing navigational warnings for a designated NAVAREA within the IMO/IHO World-Wide Navigational Warning Service (WWNWS) (see figure below).

Figure 9: NAVAREAS for coordinating and promulgating navigational warnings under the World-Wide Navigational Warning Service

6. C-55⁸

The aim of IHO Publication C-55 is to present a clear picture of the worldwide coverage of surveys and nautical charts and of the extent of effective organizations for the timely promulgation of navigational safety information. The following tables outline the survey and nautical chart coverage in the U.S.

6.1 Hydrographic Coverage Available:

Area: USCHC Region (A)⁹

⁸ Source: February 2018 IHO U.S. C-55 submission.

⁹ Ibid. page 488. Area is defined by the total hydrographic survey coverage available where A = adequately surveyed, B = Re-survey required, and C = never systematically surveyed.

	А	В	С
	("Adequately surveyed")	("Resurvey required")	("Never systematically surveyed")
Depths < 200m	11%	39%	50%
Depths > 200m	16%	4%	80%

 Table 4: Hydrographic Coverage, Area USCHC Region (A)

6.2 Nautical Chart Coverage Available:

USCHC Region (A)¹⁰

	A*	B*	C*
Offshore Passage	100%	100%	95%
Landfall and Coastal Passage	100%	100%	100%
Approaches and Ports	100%	100%	80%

 Table 5: Nautical Chart Coverage, USCHC Region (A)

*Where A = charting coverage by INT or other paper charts meeting S-4, B = charting covered by RNC meeting S-61, and C = charting covered by ENC meeting S-57

7. CAPACITY BUILDING

7.1 Offer of and/or Demand for Capacity Building

The United States is an active participant in the IHO Capacity Building Sub-Committee (CBSC). The US (NGA) directly supports the IHO Maritime Safety Information (MSI) training course as well as provide support to nations through on site and remote guidance and advice as they grow their hydrographic capacity.

7.2 Training offered

Training opportunities are available at various institutions in the United States. Two Category A certified hydrographic programs are available through:

- The University of Southern Mississippi (USM)¹¹
- The University of New Hampshire (UNH)¹²

¹⁰ Ibid. page 489.

¹¹ https://www.usm.edu/marine/hydrographic-science

¹² https://marine.unh.edu/program/center-coastal-and-ocean-mappingjoint-hydrographic-center

NGA

Category-B Competence Training for Nautical Cartography - NGA commenced training with an IHO/ICA/FIG IBSC approved portable S-8 Category B Nautical Cartography class in 2017. NGA teamed up with IIC Technologies to provide training to analysts with a comprehensive 20-week instructor led course and a six-week final project. Each session will run for one to three weeks at a time over the course of two years. In January 2020, NGA anticipates graduating 10 students.

NOAA

Category-B Competence Training for Nautical Cartography - In March, 2017 the IBSC approved the NOAA program for Category B in Cartography. The first class started the end of August 2017 and has 11 NOAA cartographers as the first class. In 2018-19, the first international student joined this one year competence training program.

Capt. Andrew Armstrong, NOAA (ret.), NOAA co-director of the Joint Hydrographic Center at UNH, is a member of the FIG/IHO/ICA International Board on Standards of Competence for Hydrographic Surveyors and Nautical Cartographers. As a member of the board, Capt. Armstrong is available to advise institutions on establishing hydrographic training curricula and preparing submissions to the International Board for Category A or Category B recognition. (andy.armstrong@noaa.gov).

NOAA's Office of Coast Survey hosts an annual week-long workshop on nautical chart adequacy assessment for approximately one dozen students from around the world. The participants receive training in techniques to evaluate the suitability of nautical chart products using chart quality assessment techniques with publicly available information. There will not be a workshop in calendar year 2020. For more information, please contact Dr. Shachak Peeri (shachak.peeri@noaa.gov).

• NAVY

U.S. Navy offers a six-month, IBSC approved Category B International Hydrographic Management and Engineering Program (IHMEP), commencing annually in February, via COMNAVMETOCCOM and the Information Warfare Training Group in Gulfport, Mississippi. COMNAVMETOCCOM also offers mobile hydrographic training via NAVOCEANO. COMNAVMETOCCOM's U.S. Navy's Category A and B programs and mobile training all qualify for Security Cooperation assistance.

8. OCEANOGRAPHIC ACTIVITIES

8.1 General Bathymetric Chart of the Oceans and Seabed 2030

The United States participates with the IOC-IHO Guiding Committee for GEBCO, and hosts the IHO Data Centre for Digital Bathymetry at NOAA's National Centers for Environmental Information (NCEI).

The GEBCO GC XXXIV meeting in November 2017 established Seabed 2030 as a project for the Guiding Committee (GGC). Seabed 2030 (<u>https://seabed2030.gebco.net/</u>) aims to bring

together all available bathymetric data to produce the definitive map of the world ocean floor, at the best possible resolution within practical limits, by 2030. The seafloor data and GEBCO grid will be publicly available, under the concept of collect once, use many times. The Seabed 2030 project builds on more than 100 years of GEBCO's history in global seafloor mapping. The project seeks to encourage both data collectors and data managers of governmental, academic and private interests to work together to improve the quality of publicly available data and grids of the ocean floor.

The Seabed 2030 project has great potential to create partnerships and cooperation between interested parties, significantly improving our understanding of the sea floor and empower sustainable ocean management in the coming century.

8.2 Crowdsourced Bathymetry

Crowdsourced bathymetric data can be used to identify areas where nautical charts are inadequate and proper hydrographic surveys are needed or can be applied to nautical charts when the source and uncertainties of the data are well understood. The key to successful CSB efforts are volunteer observers who operate vessels-of-opportunity in places where charts are poor or where the seafloor is changeable and hydrographic assets are not easily available.

NOAA provides financial support for the IHO-initiated project to develop a global database for crowdsourced bathymetry hosted by the IHO Data Centre for Digital Bathymetry (IHO DCDB). The IHO DCDB, co-located with NOAA's National Centers for Environmental Information (NCEI), is building the infrastructure necessary to provide archiving, discovery, display and retrieval of global crowdsourced bathymetry data from mariners around the world. The online database can be found at https://maps.ngdc.noaa.gov/viewers/csb/.

9. OTHER ACTIVITIES

9.1 Marine Spatial Data Infrastructures (MSDI) Progress

The U.S. holds active roles in supporting the work of several international MSDI-focused working groups:

- IHO MSDIWG
- UN-GGIM Marine Geospatial Information Working Group (MGIWG)
- Open Geospatial Consortium Marine Domain Working Group (Marine DWG)

9.2 National Marine Spatial Data Infrastructures (MSDI) Progress

The Federal Geospatial Data Committee (FGDC) is an organized structure of federal geospatial professionals that provide executive, managerial, and advisory direction and oversight for geospatial decisions and initiatives across the United States federal government, and is responsible for the implementation of the National Spatial Data Infrastructure (NSDI). For more information: https://www.fgdc.gov/

Related to MSDI in the U.S., "MarineCadastre.gov is an integrated marine information system that provides data, tools, and technical support for ocean and Great Lakes planning." The team for <u>MarineCadastre.gov</u> continually works "to increase access to data through data and map services. The services are designed to deliver data without replication and directly from the source." MarineCadastre.gov supports complementary efforts: Digital Coast, Data.gov, and Geoplatform.gov (a FGDC initiative). For more information: <u>https://marinecadastre.gov/</u>

Additionally, several U.S.-regional initiatives exist that further develop MSDI within the country:

- Mid-Atlantic Ocean Data Portal (<u>http://portal.midatlanticocean.org/</u>)
- Northeast Ocean Data Portal (<u>https://www.northeastoceandata.org/</u>)

U.S. chart data is provided in GIS formats via an application called ENC Direct to GIS. This application allows users to request chart data in shapefile format through a geospatiallyenabled viewer. In addition, OGC distributes Theme Layers via compliant Web Services. Theme Layer development accounts for suggestions from the IHO MSDIWG on core MSDI data layers. In order to ensure consistency across products and increase application stability, redevelopment efforts for this application and its applicable Theme Layers ensue with a delivery date planned for 2019.

The U.S. is supporting and organizing a project – the Marine Spatial Data Infrastructures -Concept Development Study (MSDI-CDS) – along with the Open Geospatial Consortium (OGC) on behalf of the IHO and international marine communities. The aim of this project is to assess the current state of data/product management and exchange technologies used in the marine domain. A technical report capturing the knowledge gained from the CDS will provide the foundation for development of a potential future pilot that will in turn advance the state of Spatial Data Infrastructures (SDIs) supporting marine data across the globe. The first MSDI-CDS workshops took place in October 2018 with the intent to gather information and help focus the effort for the future.

9.1 Earth Gravity Model (EGM) Update

The Earth Gravity Model (EGM) is being updated to reflect the variance in gravity based on the uneven mass distributions found across the irregularly shaped Earth. This gravity difference can effect air, land, and sea navigation if there is no instrument compensation to account for the difference in gravity across the Earth's surface. This model is also important in establishing Mean Sea Level (MSL), which is a component of the World Geodetic System (WGS) system. The next EGM is scheduled for release in 2020. After the 2020, subsequent releases will be on a 10-year development and release cycle. (see https://earth-info.nga.mil/GandG/update/index.php?action=home)

9.2 World Magnetic Model (WMM) Update

The World Magnetic Model (WMM) helps define the difference between true north and magnetic north. Safe navigation across the Earth's surface requires the application of this correction. This model changes over time because of magma changes in the Earths molten iron core. Historically, the shift in the WMM has been consistent over time. However, in recent years the shift has accelerated leading to the need to create an out-of-cycle update to the WMM in 2019. This accelerated shift has the greatest effect on navigation in the northern latitudes of the Earth. Accurate compass headings are essential for a wide range of positioning and navigation system applications that use the Earth's geomagnetic field, including most aircraft, ships, submarines and GPS receivers. The U.S. plans to release the regular 5-year release of the WMM in 2020 as well. (see https://earth-info.nga.mil/GandG/update/index.php?action=home)
