

## Proposal on Developing Chinese Version of S-67

**Submitted by:** China

### PROPOSAL:

The WG is invited to develop the Chinese version of S-67, so as to further expand the influence of S-67 publication in the world and promote safety of navigation.

### EXPLANATORY NOTE:

1. S-67 "*Mariners Guide to Accuracy of Depth Information in ENC*" is a very important IHO publication which is helpful for mariners to understand the adequacy and accuracy of charted depths and their positions clearly on an Electronic Navigational Chart(ENC). S-67 1.0.0 Edition has been released in September 2020 based on the excellent work of DQWG, but at present there is only an English version of S-67 on IHO website.

2. At present, many IHO publications are available in multiple languages, which not only promotes the application of those IHO publications and the development of hydrographic technology, but

also supports the safety of navigation and expands the global influence of IHO.

3. The development of the Chinese version of S-67 will help to promote the implementation of the publication worldwide and thus contribute to safety of navigation. Therefore, it is suggested that the WG develop the Chinese version of S-67.

4. Under the framework of DQWG, China MSA is willing to undertake the development and maintenance of the Chinese version of S-67 to ensure that the Chinese version is consistent with the latest English version.
