

S-100 Next generation of Dynamic Geospatial Navigation Services : The Full Value Chain

CHS / Teledyne Caris / SevenCs / PRIMAR / OneOcean / SEAiq / St-Lawrence River Pilots/

HSSC-13 Stakeholder Session

VTC

2021-05-05

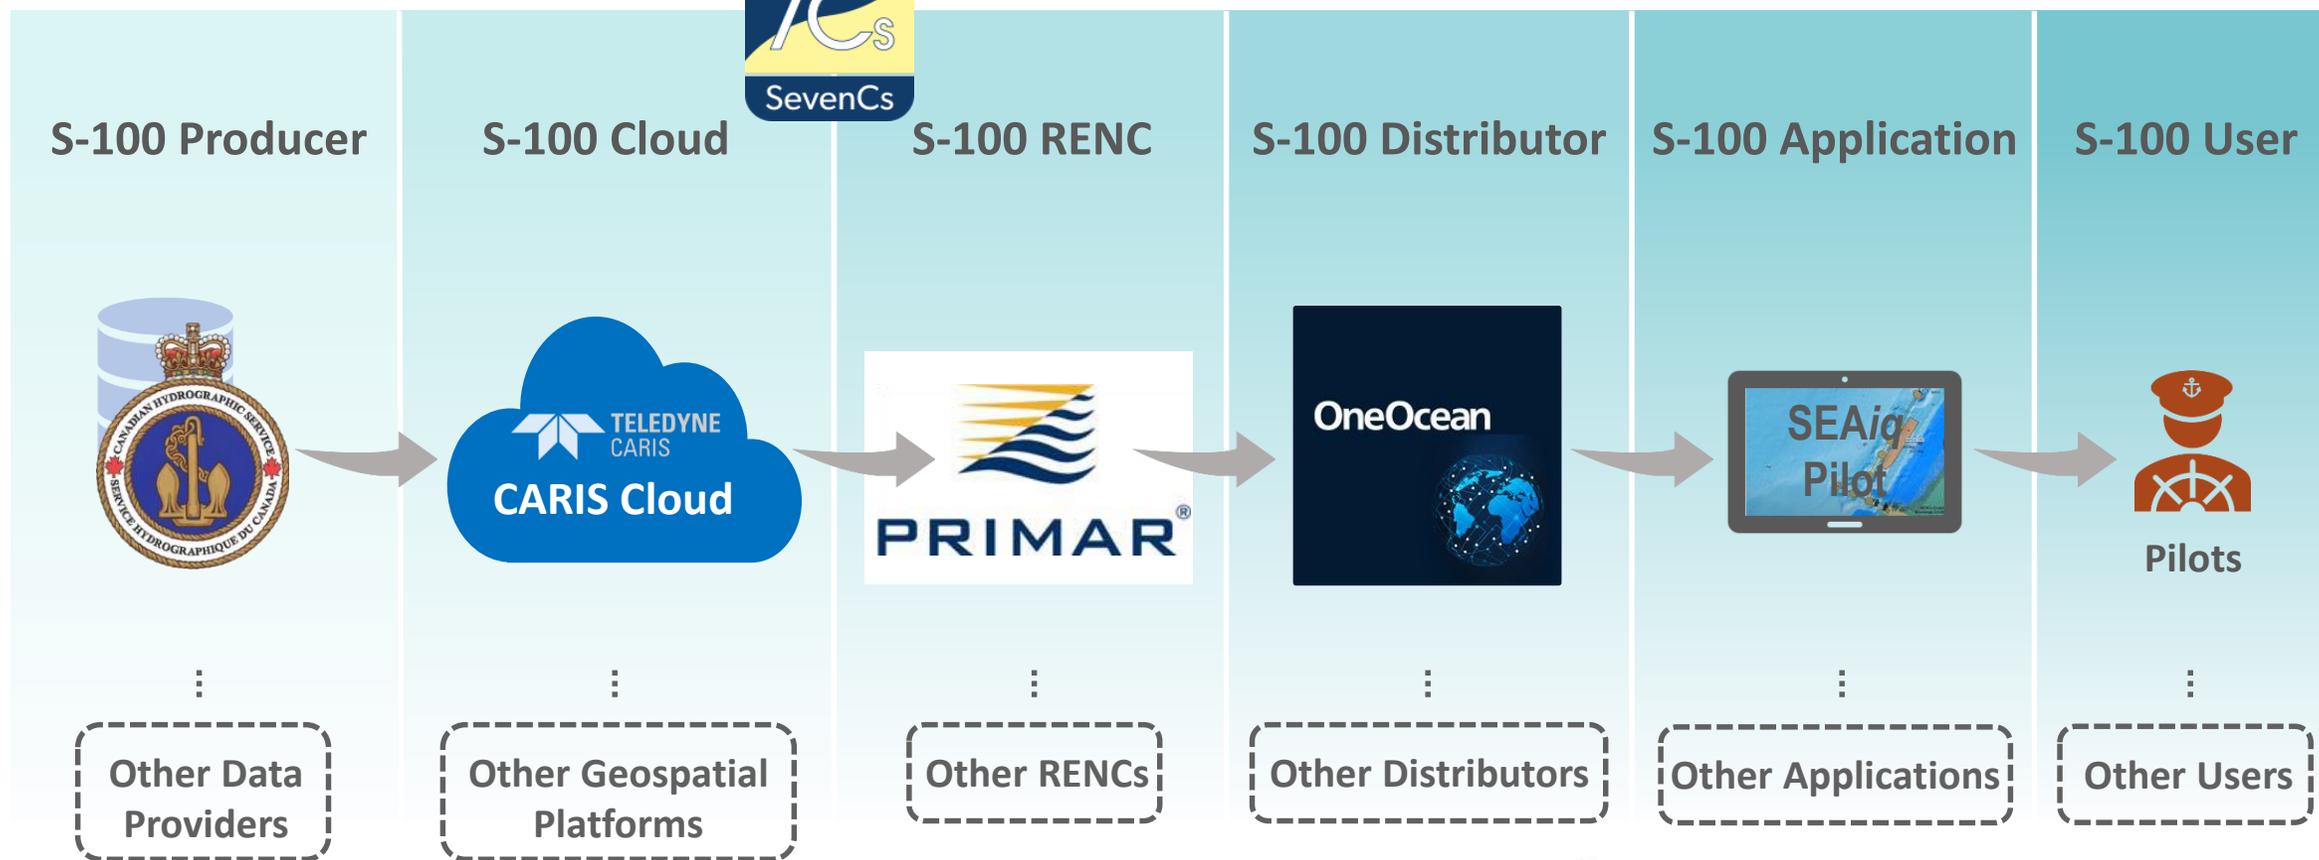

S-100 Service – Full Value Chain

S-100 Validation

S-100 Service – Full Value Chain

S-100 Validation

S-100 Producer – Canadian Hydrographic Service

- From Static Product to Dynamic Subscription Service
- Challenging data management (numerous sources to one deconflicted service)
- Authority within the country (CHS = S-101 / S-102 / S-111 / S-104)
- Automated and timely updates
- Writing the book as we go.
- Backend big data analytics has potential

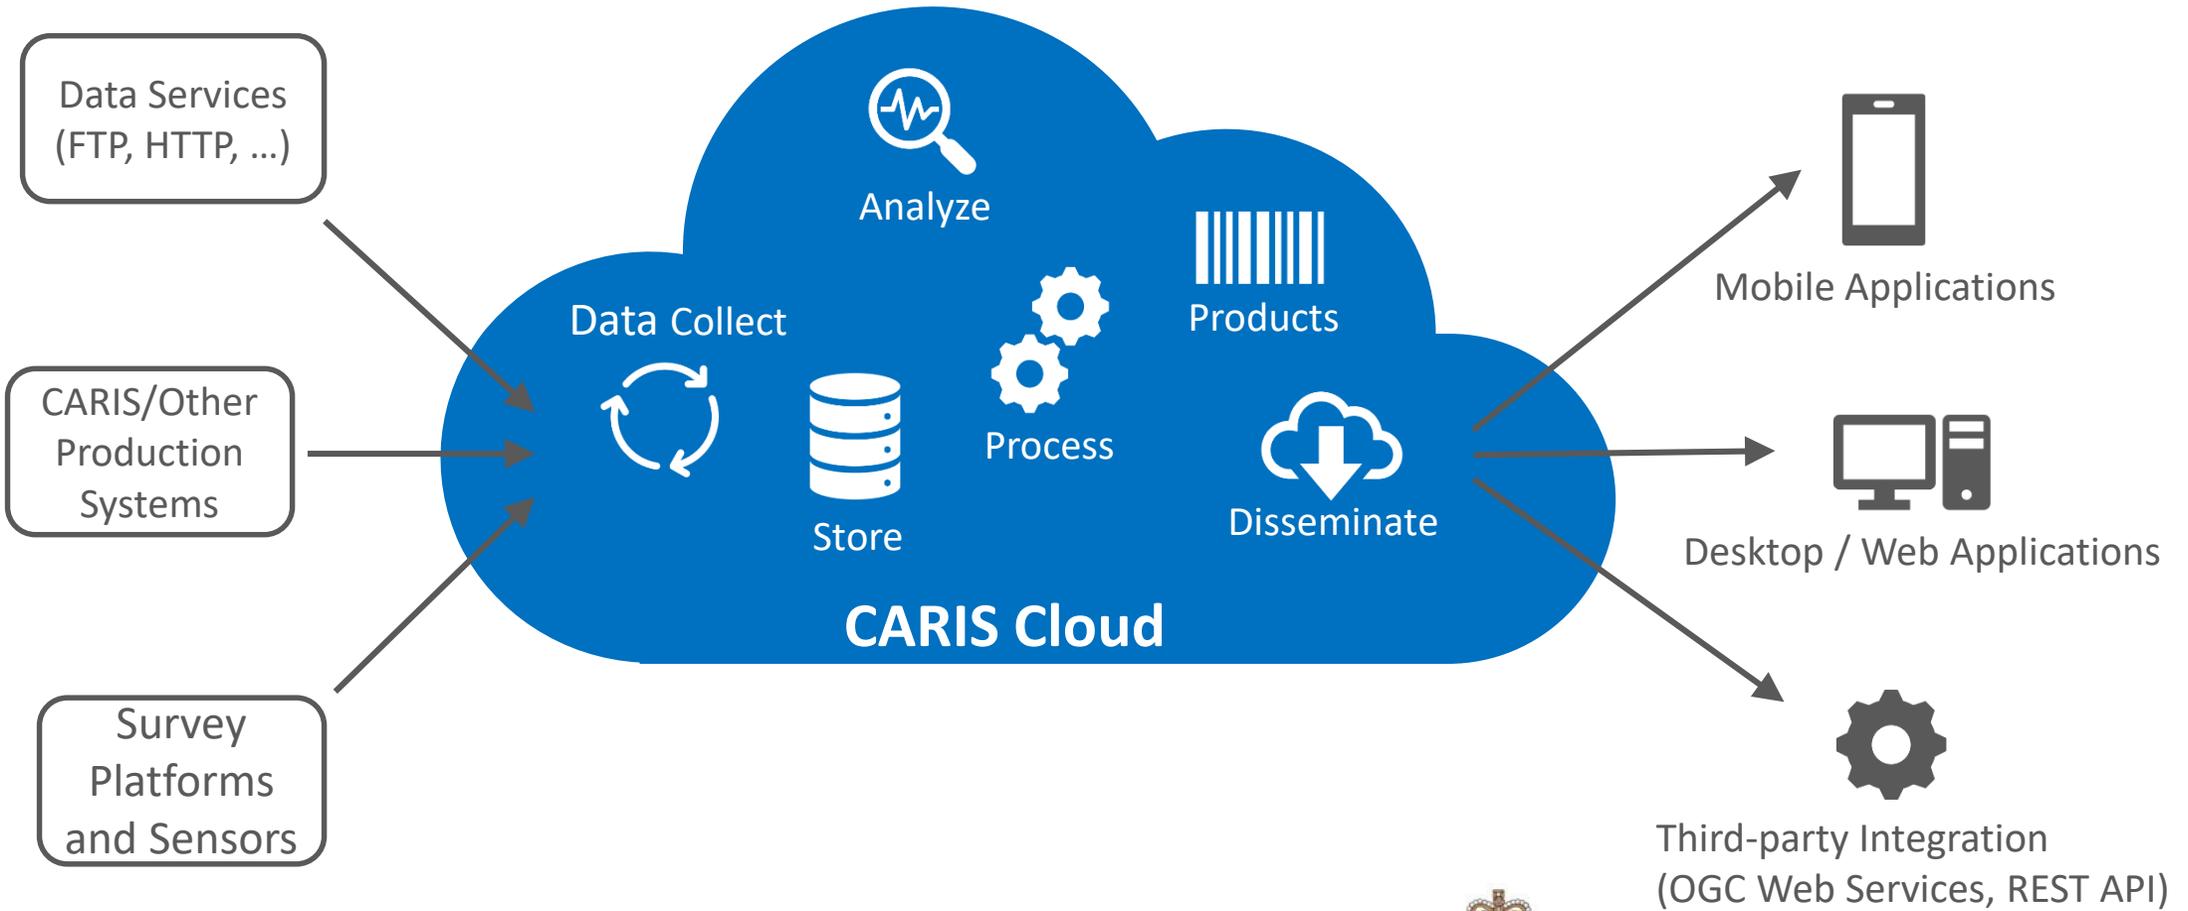

S-100 Cloud – Teledyne CARIS

- Technology partner for this new era of products and services through cloud services and infrastructure
- Built on 40 years of hydrographic survey, data management and chart production experience at hydrographic organizations around the world
- CARIS Cloud technology provides highly automated workflows that reduce the survey-to-bridge timeline
- Foundational technology for e-Navigation and autonomous shipping
- Positions Hydrographic Offices as leaders in the Blue Economy

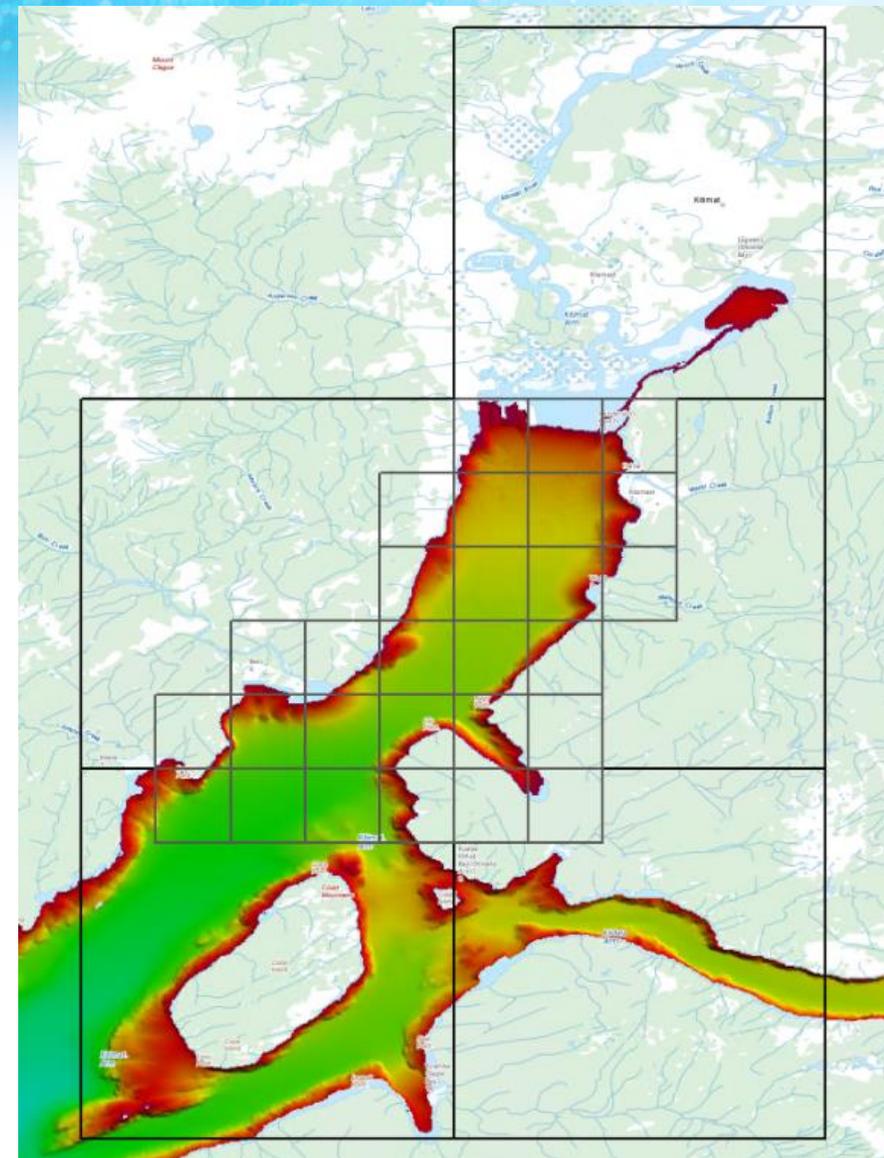

CARIS Cloud Concept

S-100 Cloud Features

- Scalable cloud platform for geospatial data
- Direct connection to CARIS HPD and BDB
- Get the most valuable data to market
- Share data easily with third parties and RENCs
- Teledyne CARIS maintains the Infrastructure
 - IT infrastructure
 - Cyber Security
 - Software and updates
 - Service Level Agreements
 - Analytics (usage patterns, AI)

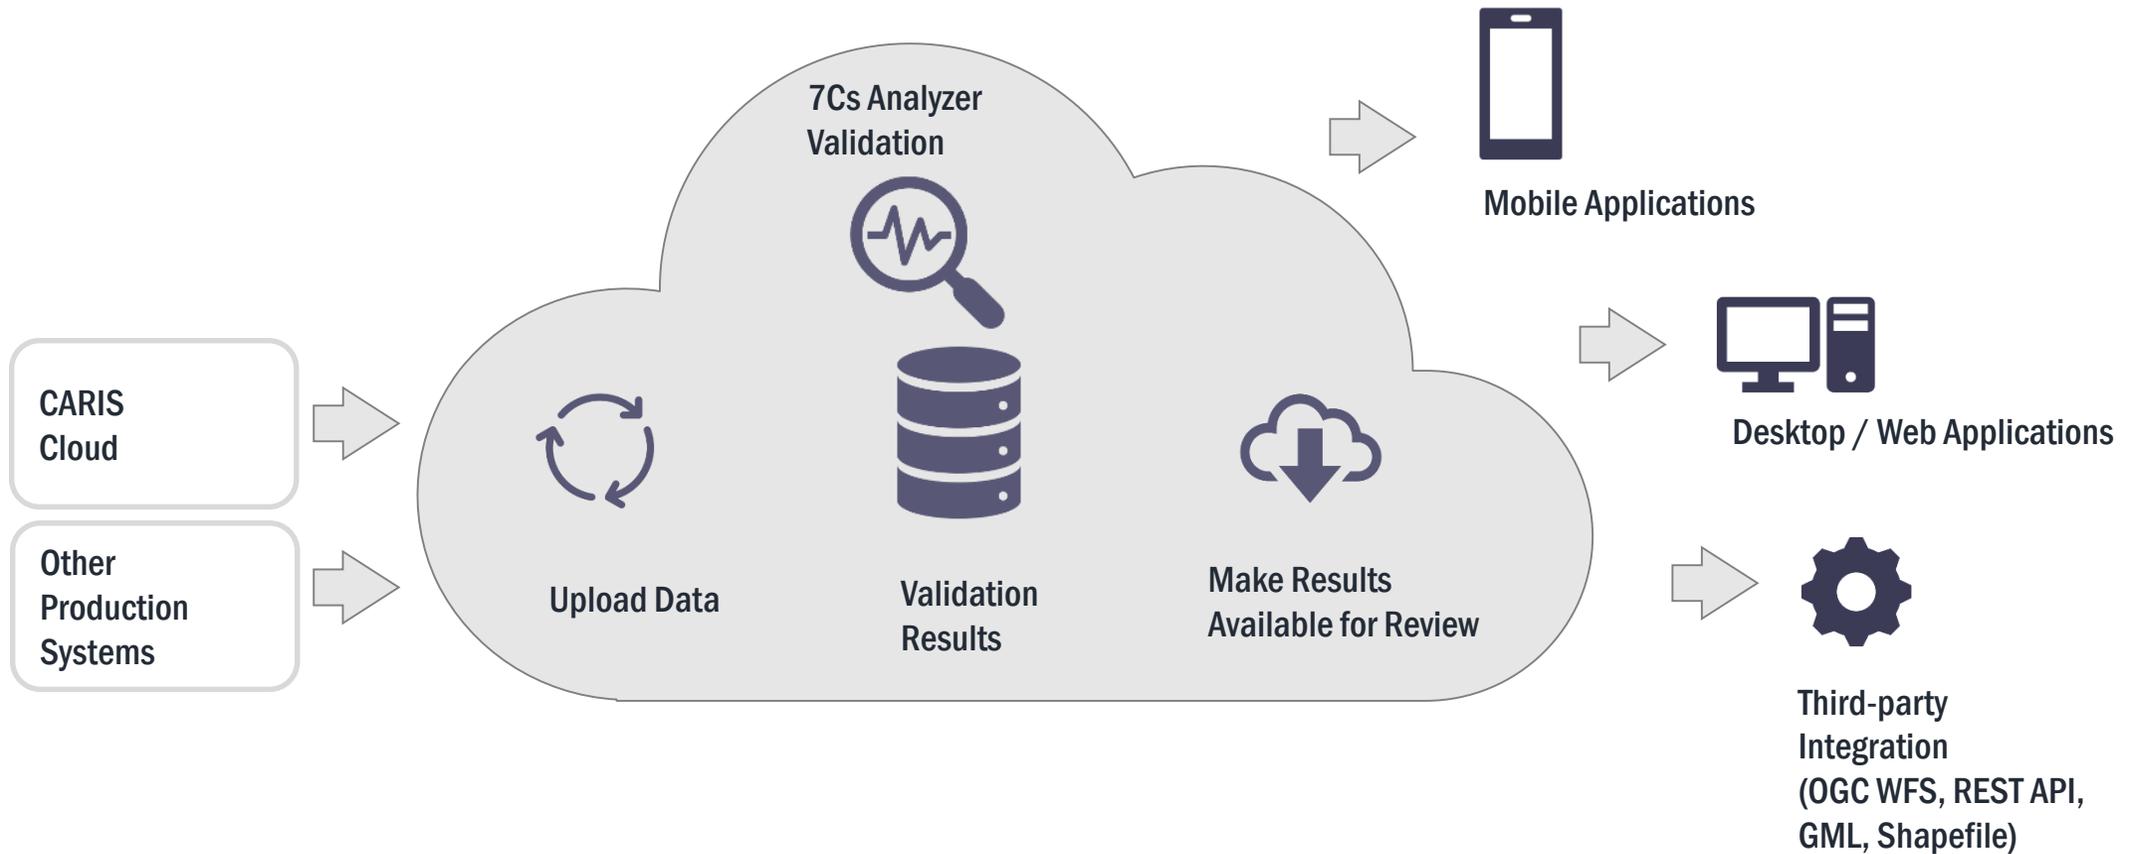

S-100 Validation – SevenCs / ND

- SevenCs has been developing ENC and ECDIS related solutions, services, and software for more than 3 decades.
- Product range includes chart production/validation software, ECDIS Kernels, Web Chart Solutions, Navigation Software (PPU,ECS).
- SevenCs belongs to the *ChartWorld International Group* of companies (major digital maritime-navigation provider).
- SevenCs and ND have teamed up to develop solutions and services for S-100 validation.

S-100 Validation - SevenCs

S-100 Validation - SevenCs

- Service oriented architecture that integrates with CARIS Cloud (or other production systems)
- Data is uploaded from CARIS Cloud
- Independent validation in accordance with IHO standards
 - S-101
 - S-102
 - S-104
 - ...

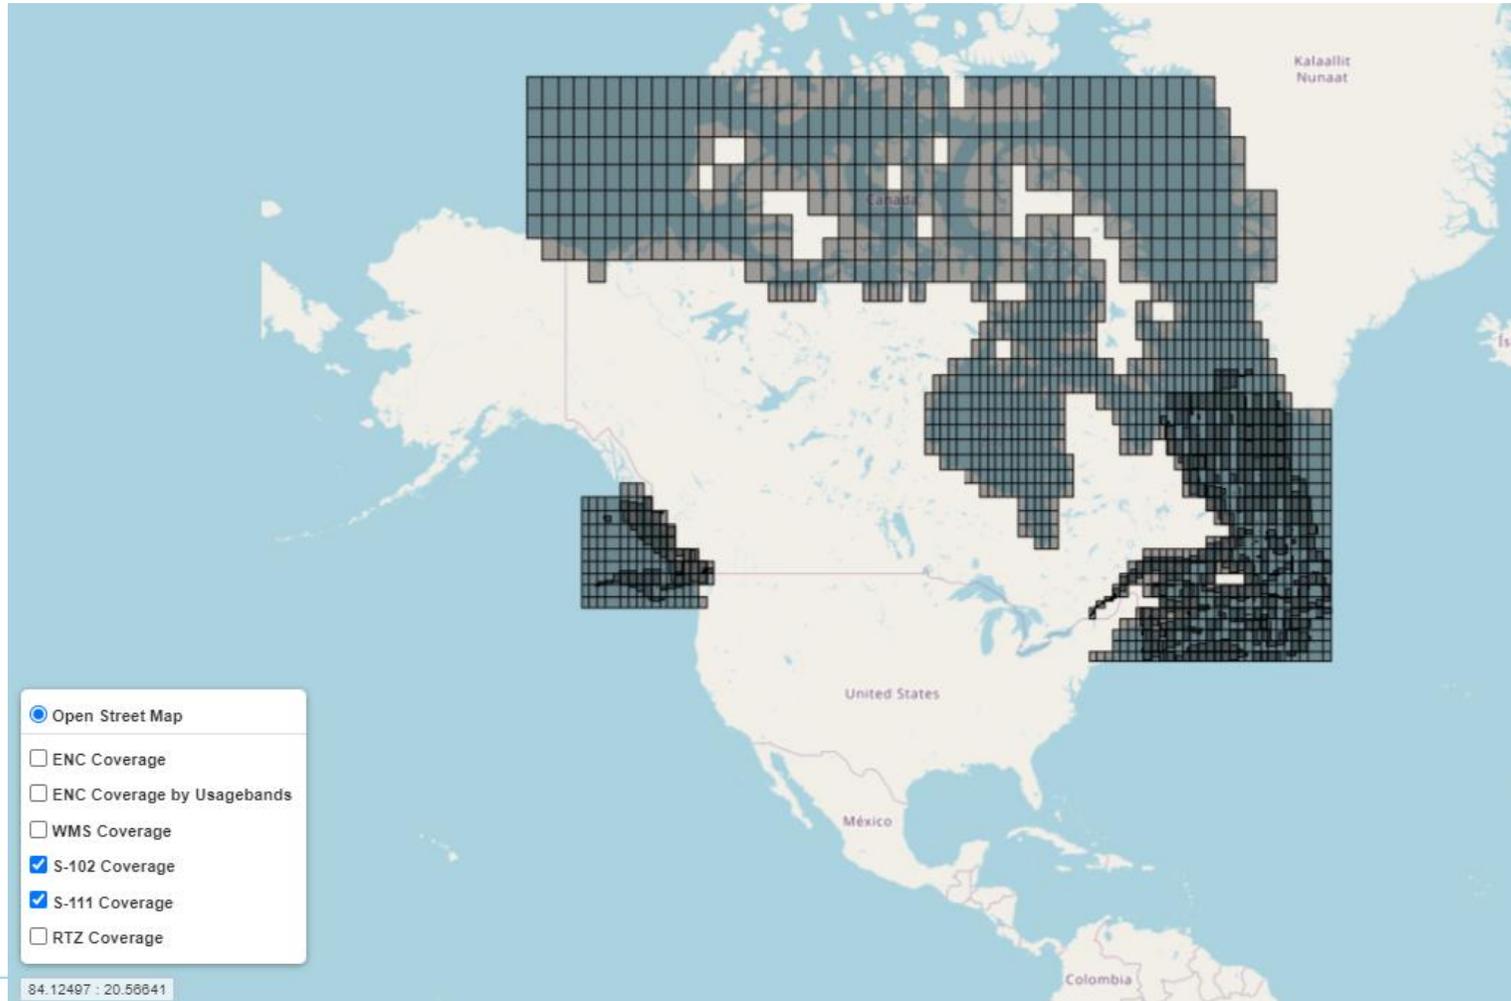

S-100 Validation

- API offers simple pass/fail status, as well as detailed validation results as:
 - OGC WFS
 - GML
 - Shapefile
- Validation can be triggered automatically as dataset is imported into CARIS Cloud
- Results are made available for review and assessment

S-100 RENC – PRIMAR

S-100 Service Coverage

- PRIMAR Chart Catalogue
- 1265 S-102 datasets
- 1287 S-111 datasets

S-100 RENC – PRIMAR

- Automatic upload from Caris Cloud Service inclusive support for Virtual PRIMAR Network (VPN) upload.
- 12, 9, 6, 3 month subscriptions
- 3 month trail, R&D and 1 month Demo subscriptions
- S-100 Part 15 encryption
- Available via PRIMAR Online services (API)
- S-104 data expected in the Service before end of 2021.

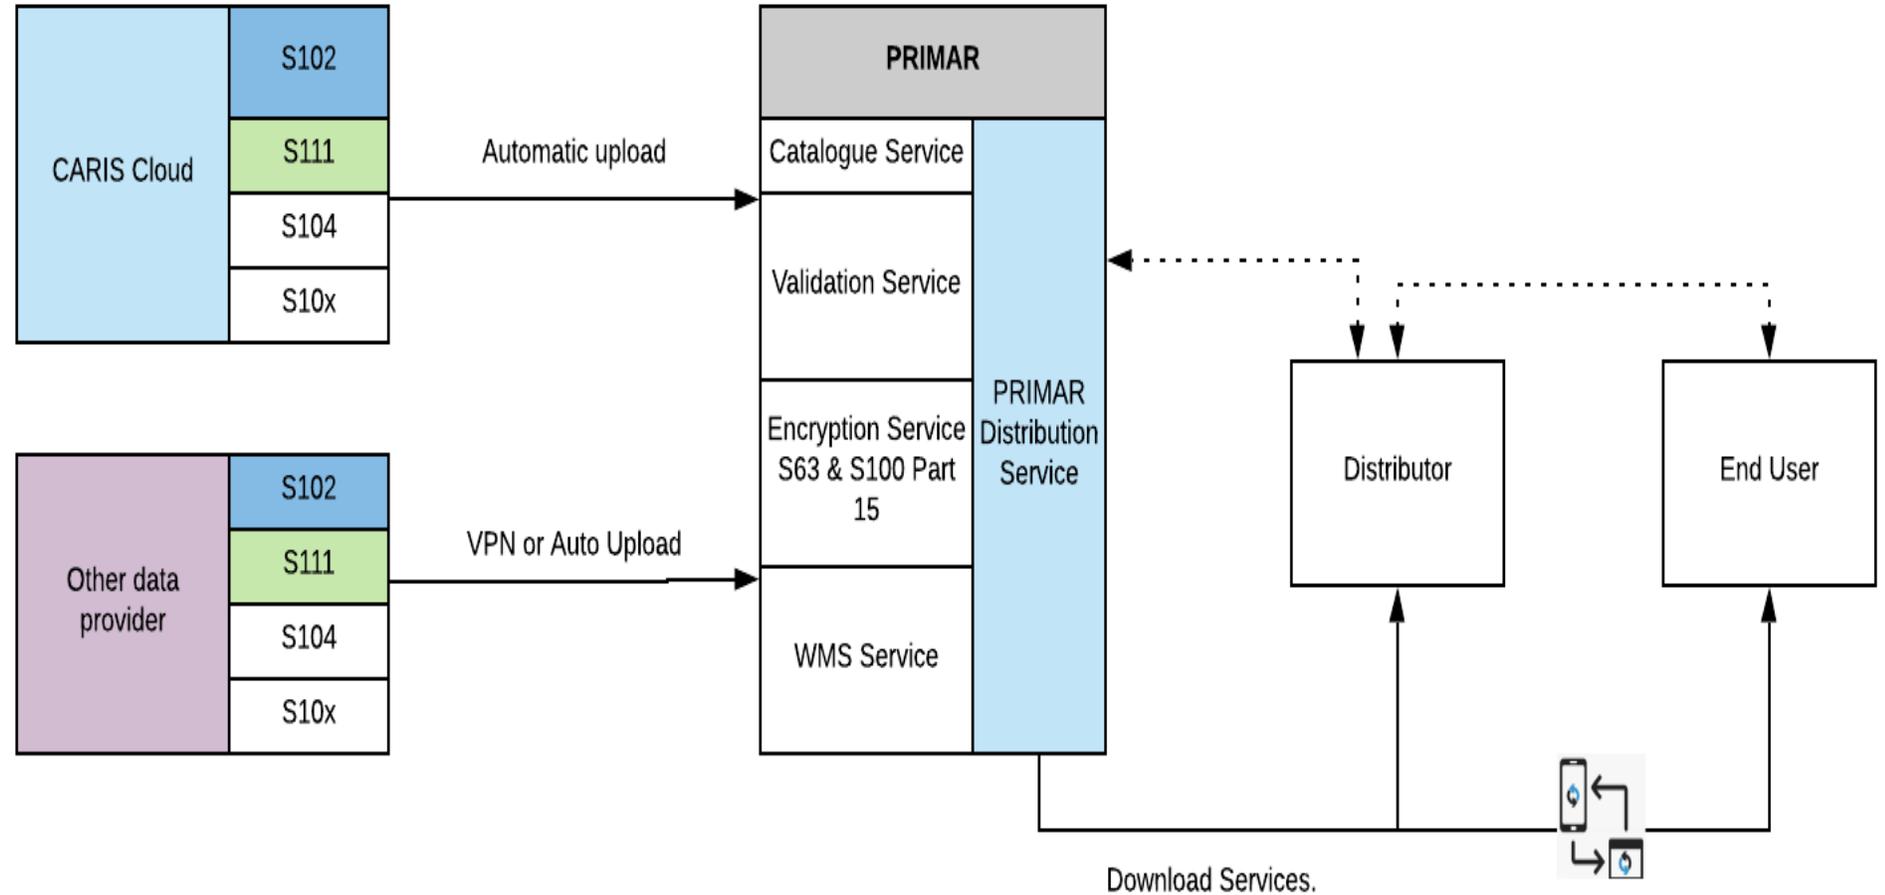

S-100 RENC – PRIMAR

PRIMAR S-100 Service

Automatic cloud upload or manual/auto VPN upload.

Updates are pushed automatically to the end user.

S-100 Distributor – OneOcean

PRIMAR
subscription setup
and assistance
with coverage
selection

Order processing
via PRIMAR portal

PRIMAR
subscription
management and
renewal

24/7 support with
strong knowledge
of SEAiQ software

OneOcean fully supports the end user to ensure a seamless experience

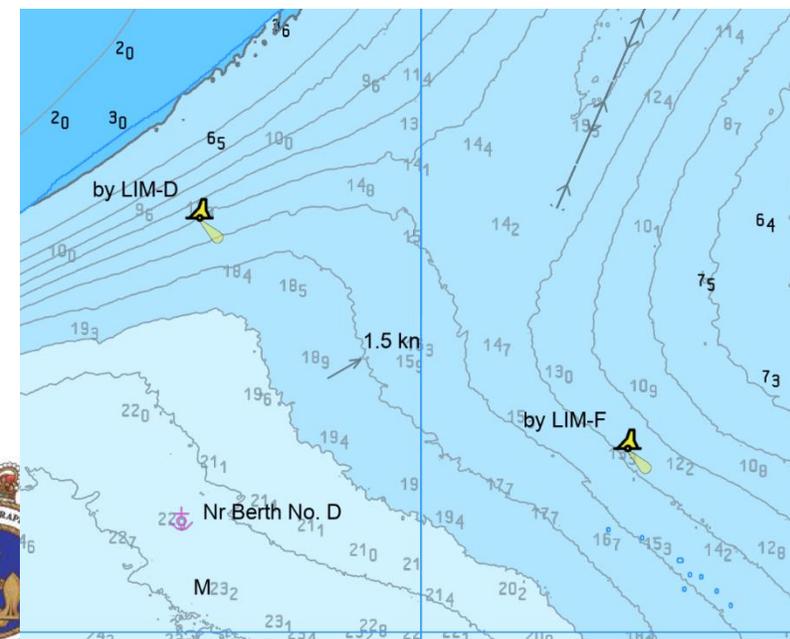

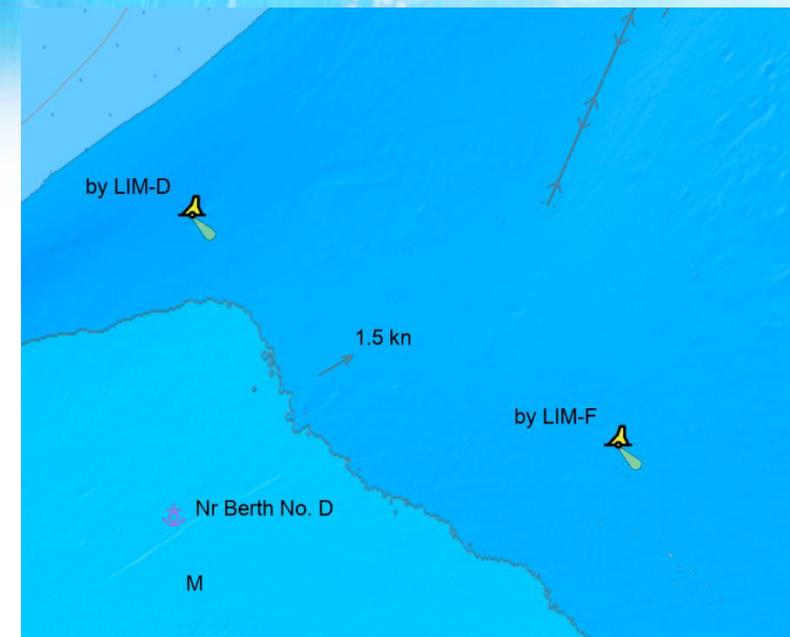

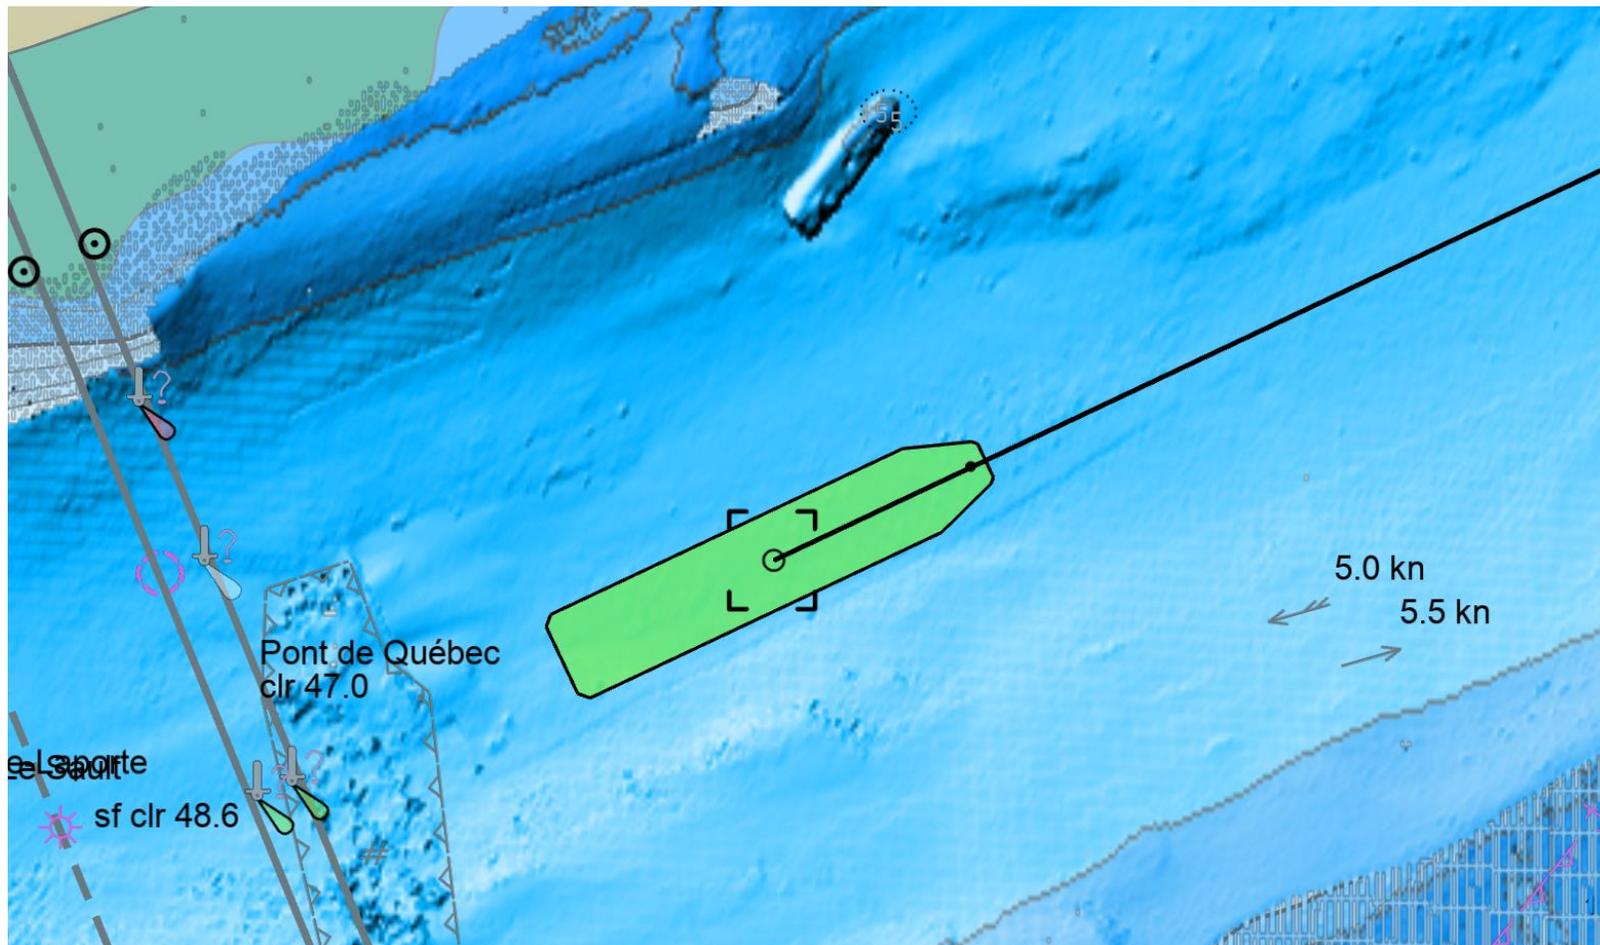

S-100 Application – SEAiQ Pilot

- Adopted by over 1/3 marine pilots world-wide
 - Lower St Lawrence Pilots, Atlantic Pilotage Authority
 - London, Hamburg, Miami, Los Angeles, Singapore...
- S-100 series products developed in cooperation with CHS and CPBSL pilots
- S-102 (completed 2020)
 - Vector and Raster presentation
 - Set contours and intervals to any depth
 - Chart adapts to mariner's needs
 - Overlays ENC features (ATON, etc) on bathymetry
- S-111 (current) and S-104 (water level) completed 2021
- Automatic download and update from PRIMAR

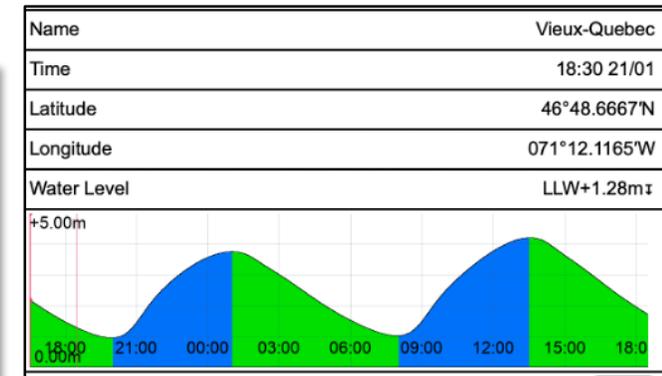

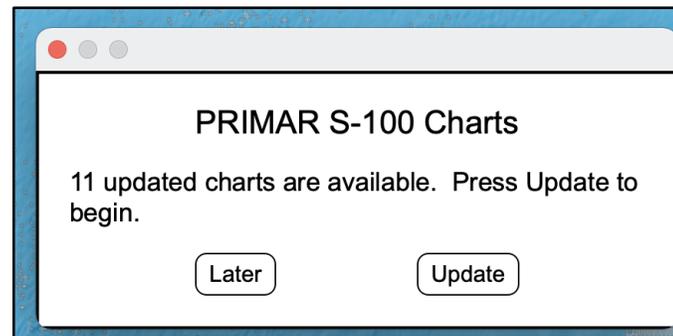

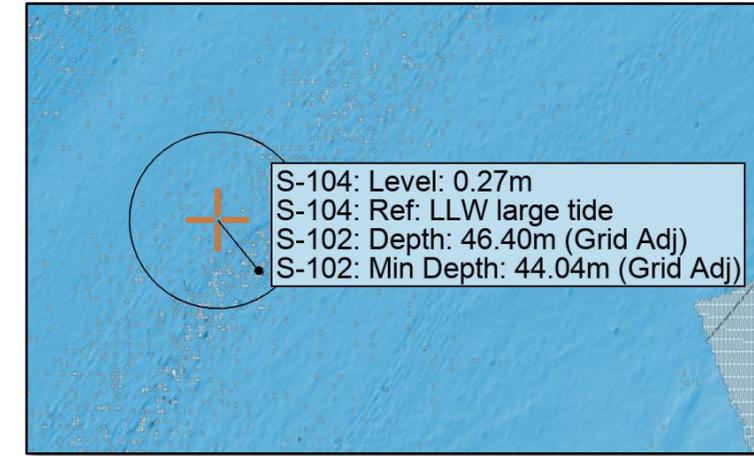

S-100 Application – SEAiQ Pilot (S-102)

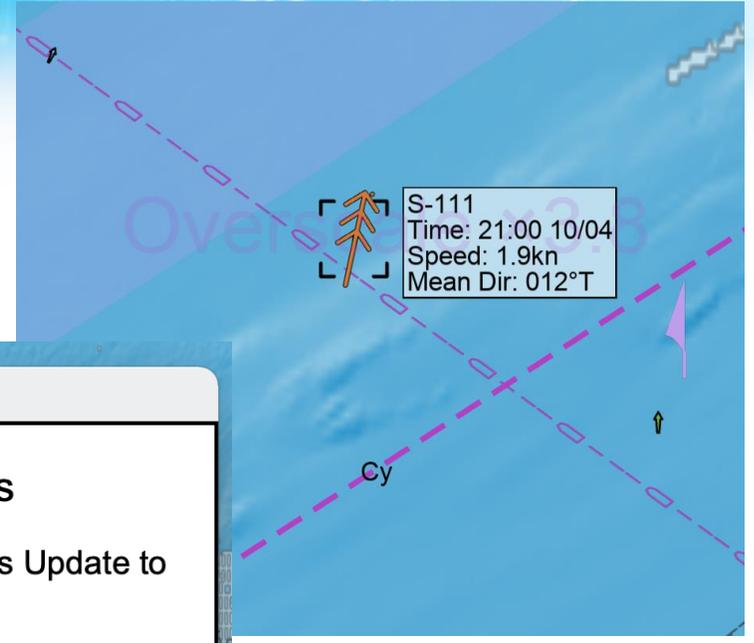

S-100 Application – SEAiQ Pilot (S-104 & S-111)

- Gridded & Point data
- Real-time data probe
- Automatic water level adjustment for S-102
- Slider to browse time
- Automatic PRIMAR download/update
- Future: Use currents to adjust predictions

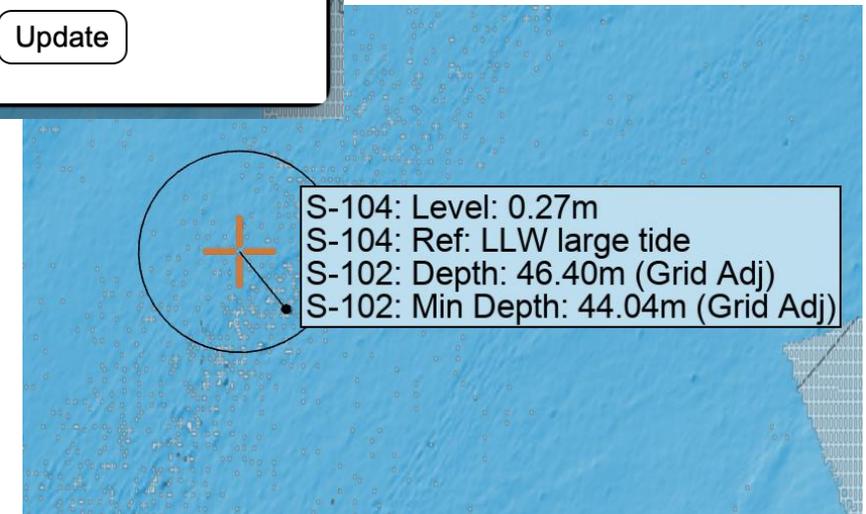

S-100 Application – SEAiQ Pilot

PRIMAR S-100 Charts

11 updated charts are available. Press Update to begin.

Later Update

S-100 Users – Lower Saint Lawrence River Pilots

The Project

- Sea trials: over 1,000 hours, still ongoing.
- Various ships of different sizes, drafts, and equipment under varying weather conditions

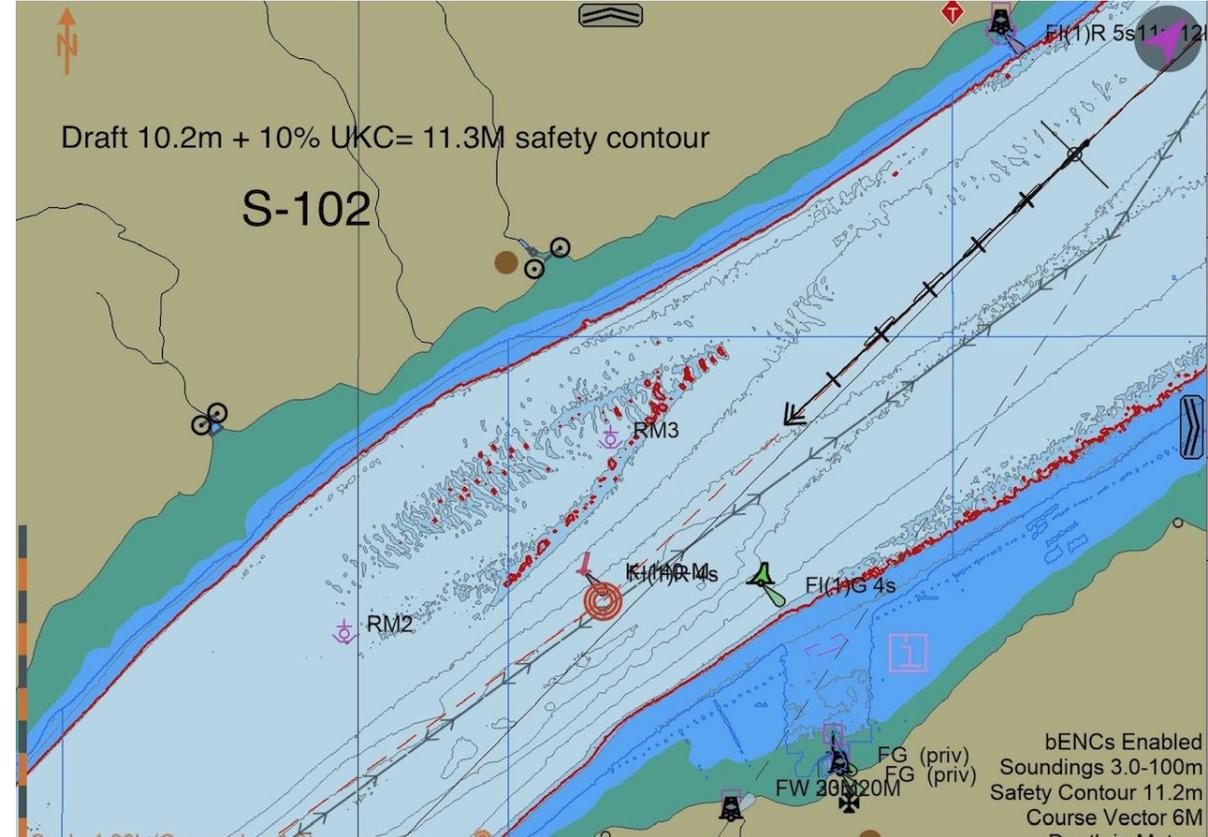

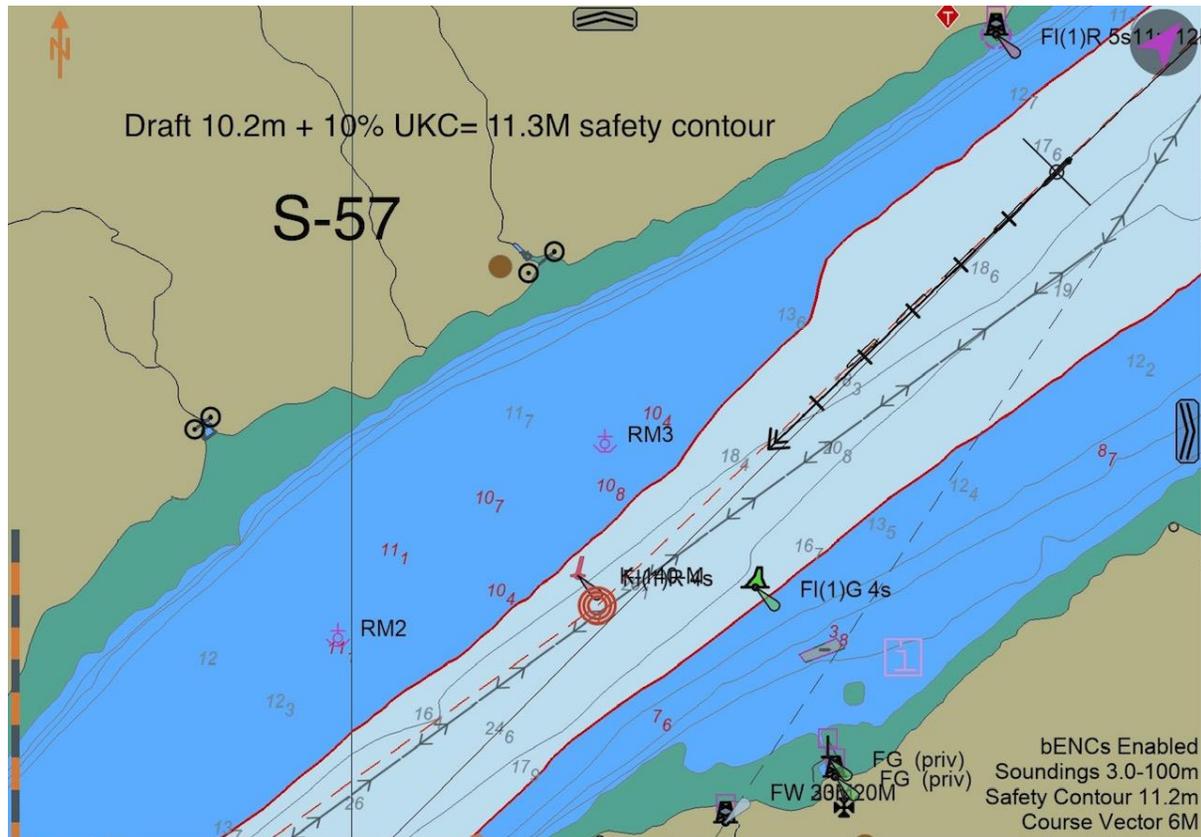

Objective:

- To develop a navigator-friendly product

Piloting with S-102

Static vs Dynamic

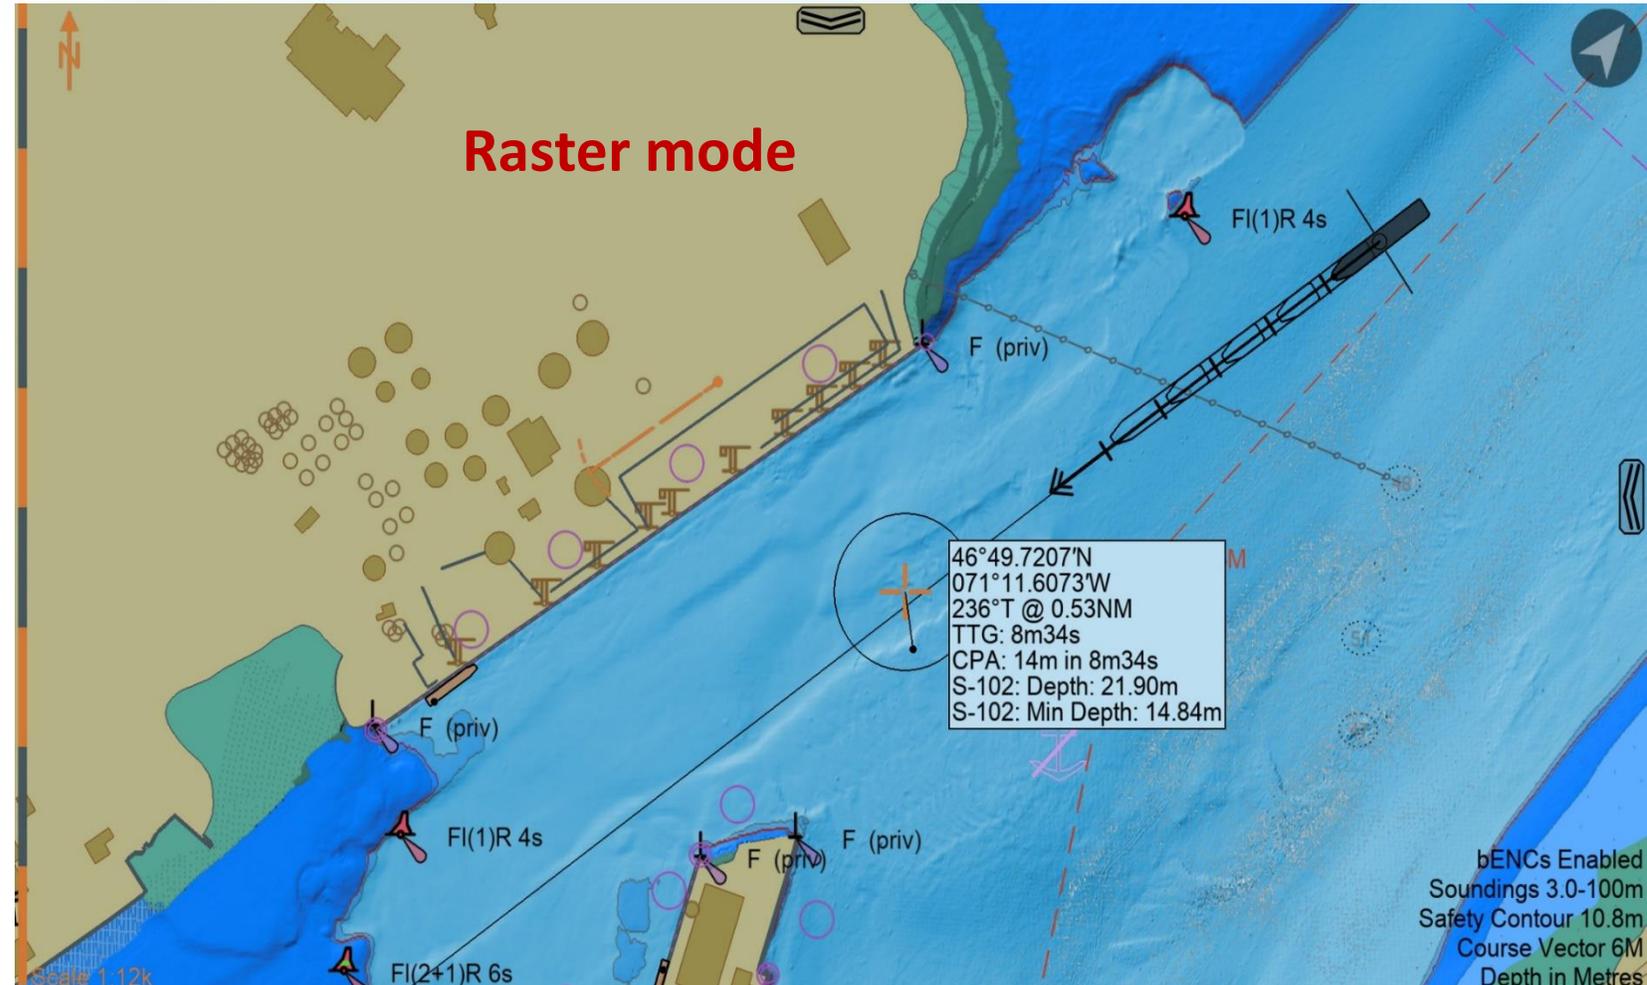

Better situational awareness = increased navigational safety

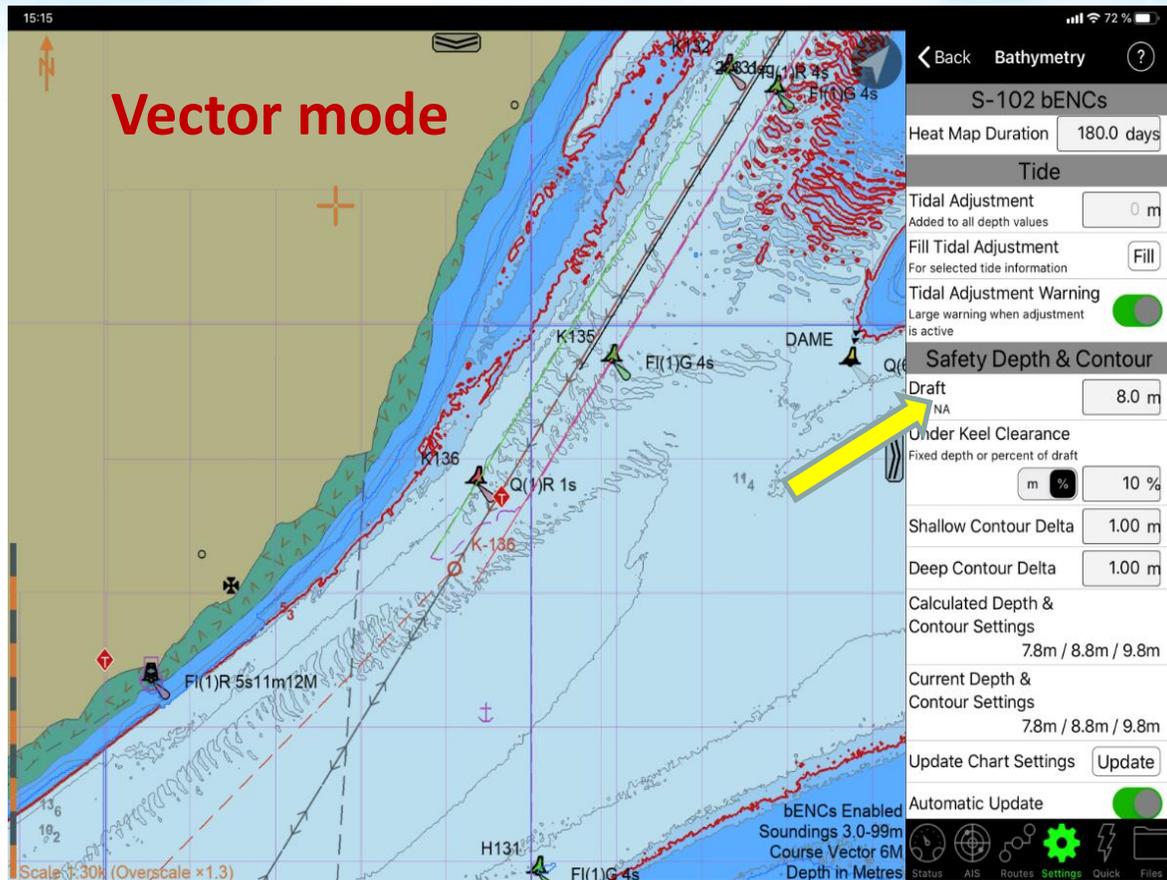

Piloting with S-102

Improvements:

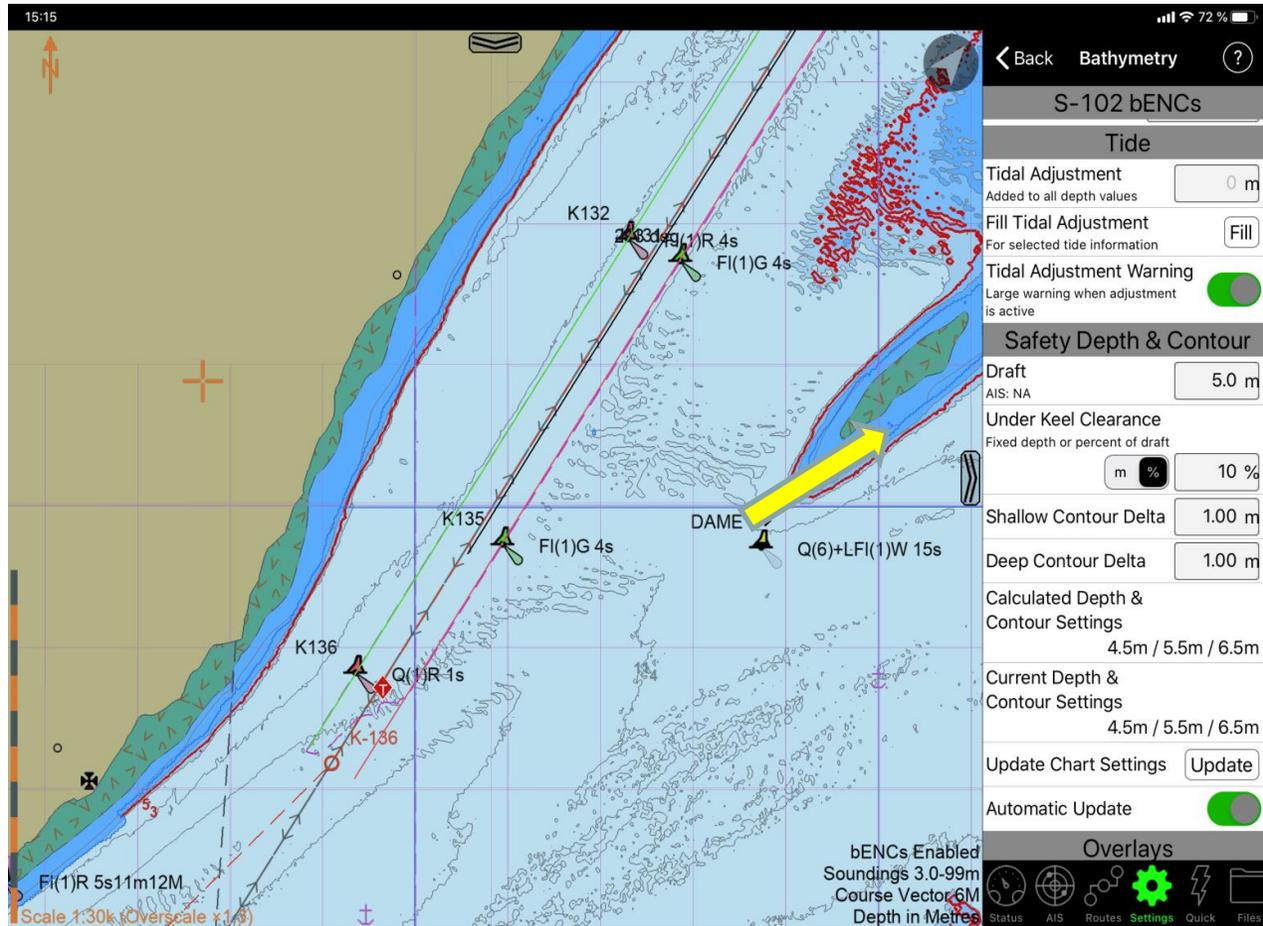

- Visual display of objects and navigational aids
- Depth query cursor
- Heat map (update tracking)

Piloting with S-102

- Safety contour adapting to ship's draft
- Voyage planning & contingency plans
- Dynamic tidal adjustments

Looking Forward

- National - International Community engagement
- Full 4 Dimension Service
- Number of potential Geospatial Apps are endless
- Hydrography has a huge role to play to create a dynamic digital twin of oceans
- 2 way communication, floating assets to feed observation back to forecasting system (Real-time data assimilation)
- S-100 services will enable E-nav, autonomous technologies and dynamic digital twin...
