

S-101PT Letter 03/2023

21st March 2023

Portrayal Catalogue 1.1.0 Review

Dear S-101 Project Team Members,

I am pleased to report that a draft version of the S-101 Portrayal Catalogue 1.1.0 is now available from the Github repository located here.

https://github.com/iho-ohi/S-101_Portrayal-Catalogue/releases

A peer review period will now take place until the **26th March 2023**. PT members are encouraged to review and provide feedback on this Catalogue if they are able to. We would especially welcome feedback from any PT members who have been implementing S-100 and who would be able to assess this Catalogue in their testbed implementations.

Unless issues are identified, I will work with the S-100 Working Group Chair to prepare a Working Group Letter seeking approval of S-101 1.1.0. As many of you are also members of the S-100WG this review will provide an opportunity to raise any comments or issues identified with the draft documents. Given some of the issues identified for future work a set of collated Release Notes are being developed to accompany 1.1.0 upon publication.

As S-101PT chair I would like to recognize the work of the Portrayal Sub-Group led by Alvaro Sanchez and in particular the team from US Navy – Naval Information Warfare Centre (NIWC). This team's efforts have helped us reach a critical milestone on the journey to an operational edition of S-101. With a stable baseline focus can now move to testing and end user engagement as inputs to shape S-101 Edition 2.0.0.

Yours sincerely,

Tom Richardson
(IHO – S-101PT Chair)
