

## World Hydrography Day

June 21 was established by the United Nations General Assembly as World Hydrography Day. Established at the initiative of the International Hydrographic Organization (IHO), the purpose of this date is to allow the dissemination of the relevance of the IHO and the hydrographic services of the Member States, in favor of navigation safety, particularly in ports, areas of high international maritime traffic, in sensitive maritime areas, and the protection of the marine environment. On this date, the Hydrographic Institute held a seminar on June 18 to discuss the theme defined by the International Hydrographic Organization for 2025, Seabed Mapping: Enabling Ocean Action.
