

**IHO File No. S3/8151 &
S3/6004**

**CIRCULAR LETTER 46/2019
25 September 2019**

ADOPTION OF REVISION OF IHO RESOLUTION 2/2007, AS AMENDED

References:

- A. Publication M-3, 2nd Edition 2010 - Updated to August 2018 - *Resolutions of the IHO*.
- B. IHO CL 32/2019 dated 27 June - *Call for the approval of the revision of IHO Resolution 2/2007, as amended*.

Dear Hydrographer,

1. The approval of Member States on the revision of IHO Resolution 2/2007, as amended (see Reference A), was requested by Reference B.
2. The Secretariat would like to thank the following 46 Member States that replied to Reference B: Argentina, Australia, Bangladesh, Belgium, Brazil, Canada, Chile, Colombia, Cyprus, Ecuador, Estonia, Finland, France, Germany, Greece, Guatemala, Iceland, India, Iran (Islamic Republic of), Ireland, Italy, Japan, Republic of Korea, Malaysia, Malta, Mauritius, Monaco, Mexico, Netherlands, Norway, Oman, Peru, Poland, Romania, Russian Federation, Saudi Arabia, Singapore, South Africa, Spain, Sweden, Tunisia, Turkey, Ukraine, United Kingdom, United States (USA) and Venezuela.
3. All 46 Member States approved the proposed revision to IHO Resolution 2/2007, as amended. Five Member States offered comments in addition to their vote. These comments and the outcome of their review by the Chairs of the HSSC, IRCC and the Secretariat are provided in Annex B to this Circular Letter.
4. When Reference B was issued, there were 90 Member States of the IHO with three States suspended. In accordance with the provisions of the Convention on the IHO, the minimum number of affirmative votes required is 30. As a result, the revision to the IHO Resolution 2/2007, as amended, has been adopted.
5. The final text of the revised IHO Resolution 2/2007 is provided in Annex A and will be incorporated into a new Edition of the IHO Publication M-3 *Resolutions of the IHO* to be completed by the Secretariat in due course.

On behalf of the Secretary-General

Yours sincerely,

Abri KAMPFER
Director

Annex A: Revised IHO Resolution 2/2007 as amended – Principles and Procedures for developing IHO standards and conducting changes (clean version only).

Annex B: Member State's responses to IHO CL 32/2019 and comments from the Chairs of the HSSC, IRCC and the Secretariat

Revised IHO Resolution 2/2007 as amended –

**IHO Programme 2 “Hydrographic Services and Standards”
2.1 – General**

PRINCIPLES AND PROCEDURES FOR DEVELOPING IHO STANDARDS AND CONDUCTING CHANGES	2/2007 as amended	IHO CL 46/2019	A1.21
--	--------------------------	---------------------------	--------------

--

1. Scope

1.1 These principles and procedures are intended to be applied to all proposals for development of and changes to IHO technical standards and for new technical standardization work items that will require significant resources to resolve or will potentially impact on those who need to apply these standards. The principles and procedures set in place by means of this resolution for IHO technical standards are not intended to be applied for IHO GIS services, publications, catalogues or supporting documentation of general or non-technical nature which form a separate group.

1.2 Any reference to “standards” in these principles and procedures follows the ISO/IEC definitions for *standard* and *guide* and may therefore also include some IHO “specifications” and “guidelines” as appropriate¹. IHO Product Specifications, including test data sets for validation checks, are considered to be standards. The list of IHO standards that must follow the principles and procedures described in this resolution is provided in the Appendixes.

a. The list of those IHO standards that must be developed and maintained with the provision of an impact study, endorsement of the relevant Committee and endorsement by the Council if deemed appropriate by the Committee², and the approval of Member States, is provided in Appendix 1.

b. The list of those IHO standards that must be developed and maintained with endorsement of the relevant Committee and the approval of Member States, without the compulsory requirement for conduction of an impact study and not subject to the Council’s endorsement, is provided in Appendix 2.

2. Principles

2.1 Improvements to standards can only occur by change. However, significant change can lead to problems such as implementation issues by hydrographic offices, incompatibility between systems, high updating costs, market monopoly, dissatisfied users, or increased risks to safety of navigation. The following guiding principles have been developed to avoid these effects.

2.1.1 Before formal approval is granted when required, normally through Member States vote, any proposed changes to existing standards should be assessed from a technical, commercial and institutional perspective by the widest range of stakeholders, not limited to Member States, also taking into account any other relevant factors.

¹ ISO/IEC Directives, Part 2 - Rules for the Structure and Drafting of International Standards defines a standard as
... a document, established by consensus and approved by a recognized body, that provides for common and repeated use, rules, guidelines or characteristics for activities or their results, aimed at the achievement of the optimum degree of order in a given context.

The ISO defines a guide as

... a document giving orientation, advice or recommendations on non-normative matters relating to international standardization.

² See HSSC and IRCC Terms of Reference and Rules of Procedure.

2.1.2 Where possible, assessment of the proposed changes should involve all stakeholders, not only IHO Member States, but all relevant parties such as international organisations, maritime administrations, equipment manufacturers, data distributors, industry, users and other professional organisations.

2.1.3 As far as practicable, any change to standards or systems should be “backwards compatible”, or the previous edition must enjoy continued support for a specified transition time.

2.1.4 If standard changes are required for functional improvement rather than initiated by a compelling and urgent need to maintain safety of navigation, then the previously approved edition must be allowed to continue to be used for a transition phase, taking the limited accessibility of seaborne equipment into account where applicable.

2.1.5 If not already specified by an external or higher IHO authority, the transition timeline should be defined as part of the standard change approval process by the proposer.

2.1.6 In exceptional cases (for example, those affecting safety of navigation), it may be necessary to make recommendations for immediate change to standards and systems to the relevant authorities. This may be achieved through shortening the normal time frames for submission and consideration of proposals for changes, including endorsement and approval. However, such a procedure should be understood as the last resort in urgent cases.

2.1.7 The principles of a recognized project management system for all procedural steps of a conducted standard change should be agreed between interested parties beforehand.

2.1.8 All interested parties should be encouraged to continuously improve IHO standards. Constructive feedback should therefore be provided for all proposals – even in cases of rejection.

3. Procedures - General

3.1 Standardised procedures help to ensure that any proposed changes to IHO standards are properly developed, assessed, endorsed, approved and implemented. These procedures should remain simple to encourage their use.

3.1.1 Changes to IHO standards are classified at one of three different categories: *new edition*, *revision*, or *clarification* (see paragraph. 4.1). The development, assessment, approval and implementation process differs for each category, ranging from a very comprehensive regime for *new editions*, to approval at the level of a subordinate body for *clarifications*. *New editions* and *revisions* are considered to be “significant changes” for the purposes of assessment, approval and implementation.

3.1.2 The relevant IHO Committee or delegated Working Group should consider all proposals to develop *new editions* and *revisions* to standards before work commences.

- For those standards listed in Appendix 1, the Committee should always consider the impact on relevant stakeholders when assessing a proposal and planning any subsequent work on standard changes; likewise, the Committee should assess the impact on other IHO standards or guidance, especially for interoperability, data/product quality and portrayal. Appendix 3 of this Resolution provides details on the impact study conduction. This assessment should systematically include a risk and feasibility analysis, and an estimate of the resources required for the development and the implementation of a new or revised standard, including but not limited to Member States Hydrographic Services.

- If a proposed standard change is rejected by the Committee, detailed feedback should be provided to the proposal originator giving the reasons for rejection.

3.1.3 After the Committee has endorsed a proposal for standard change and established a work priority, the IHO Secretariat will incorporate the respective task into the relevant work programmes.

3.1.4 Relevant stakeholders should be notified by the appropriate IHO committees, working groups and project teams and/or the IHO Secretariat of the timetable for new standardization work items and be invited to comment and participate as appropriate. The notification should include a summary forecast of:

- the rationale of the standard change,
- the potential scope of changes of the standards,
- the standard documentation affected,
- the anticipated effects and the likely resulting actions for relevant stakeholders,
- the planned timetable for implementation, and
- the proposed effective date of the new or revised standard.

3.1.5 The IHO Secretariat should maintain an online register of IHO stakeholders. The register should be used to inform and seek input from stakeholders concerning any proposed changes to IHO standards.

3.1.6 The relevant subordinate bodies should provide the Committee with progress reports on a regular basis in accordance with their management plan and after each milestone during the development and testing phases. These should be made available to stakeholders by the IHO Secretariat (and/or relevant working groups and project teams if agreed). The Committees have the authority to approve the Edition 1.0.0 of all new standards requiring a subsequent development phase before implementation (see paragraph 4.1) and to endorse the following Editions before they are submitted for the approval of Member States.

3.1.7 After endorsement by the Committee or the Council, if applicable, the new or changed standard should be submitted to Member States by the IHO Secretariat for approval of the content, and confirmation of the “*effective date*”. This is not applicable for new standards in the development (implementation and testing) phase (see paragraph 4.1).

3.1.8 At the “*effective date*”, the new or changed standard becomes the effective standard. A “*superseded*” standard should normally remain available concurrently with the revised standard for a suitable transition period.

3.1.9 Subject to endorsement by the Committee, and the Council if applicable², followed by the approval of the Member States, a superseded standard must be withdrawn from the list of standards in force **after the transition period**.

3.1.10 Subordinate bodies may assess and request the IHO Secretariat to publish *clarifications* to standards and associated references, subject to seeking input from relevant stakeholders if appropriate. These clarifications are reported to the relevant committees at their annual meeting.

4. Procedures - Specific

4.1 First Editions, New Editions, Revisions and Clarifications

First Edition (WG/PT Development Phase)

A Working Group must make a submission to the Committee if the standard was developed by a subordinate Project Team – if the Project Team (PT) was established directly under the Committee then the PT would submit directly to the Committee – for approval of Edition 1.0.0 to be released and published for initial implementation, testing and evaluation and further stakeholder review. Such Edition 1.0.0 is not designed for regular use in approved arrangements or for provision of operational services by purpose.

The first Edition aiming to be released and published for the implementation phase of operational services is Edition 2.0.0 (See paragraph 4.3). For the maturation process from Edition 1.0.0 to Edition 2.0.0 the Working

Group (WG) has the authority to issue iterative Edition(s) 1.n.n³ – for clarifications and revisions that may have arisen during the initial implementation, testing and evaluation phase. The changes should be traceable either via a formal comment procedure or through an official proposal mechanism.

When the WG/PT has completed an impact assessment and obtained stakeholder feedback and considers that the standard is mature to become an Edition 2.0.0, it must submit the standard to the Committee for endorsement. The Committee may submit the standard to the Council for endorsement, if applicable², before the New Edition is submitted to Member States by the IHO Secretariat for approval of the content, and confirmation of the “*effective date*” of implementation.

New Edition

New Editions of standards introduce significant changes. *New Editions* enable new concepts, such as the ability to support new functions or applications, or the introduction of new constructs or data types, to be introduced. *New Editions* are likely to have a significant impact on either existing users or future users of the revised standard. It follows that a full consultative process that provides an opportunity for input from as many stakeholders as possible is required for standards listed in Appendix 1, optional for those listed in Appendix 2. Proposed changes to a standard should be evaluated and tested wherever practicable. The approval of Member States is required before any *New Edition* of a standard can enter into force. All cumulative *clarifications* and *revisions* must be included with the release of an approved *New Edition* of a standard.

Revision

Revisions are defined as substantive changes to a standard. Typically, *revisions* change existing specifications to correct factual errors; introduce necessary changes that have become evident as a result of practical experience or changing circumstances; or add new specifications within an existing section. *Revisions* could have an impact on either existing users or future users of a revised standard. It follows that a full consultative process that provides an opportunity for input from as many stakeholders as possible is required for standards listed in Appendix 1, optional for those listed in Appendix 2. Proposed changes to a standard should be evaluated and tested wherever practicable. The approval of Member States is required before any *revisions* to a standard can enter into force. All cumulative *clarifications* must be included with the release of approved corrections revisions.

However, there may be instances where more urgent action is required, especially where there are serious implications to safety of navigation. In such cases, a “fast-track” approval by correspondence and rapid implementation process may be needed. This should only occur in exceptional circumstances, but any such fast-tracked *revisions* will still require the approval of Member States before they can enter into force.

A *revision* shall not be classified as a *clarification* in order to bypass the appropriate consultation processes.

Clarification

Clarifications are non-substantive changes to a standard. Typically, *clarifications*: remove ambiguity; correct grammatical and spelling errors; amend or update cross references; insert improved graphics in spelling, punctuation and grammar. A clarification must not cause any substantive semantic change to a standard. *Clarifications* are the responsibility of the relevant subordinate body and may be delegated to the responsible editor.

4.2 The associated version control numbering to identify changes (n) to all IHO standards should be as follows:

New Editions denoted as n.0.0

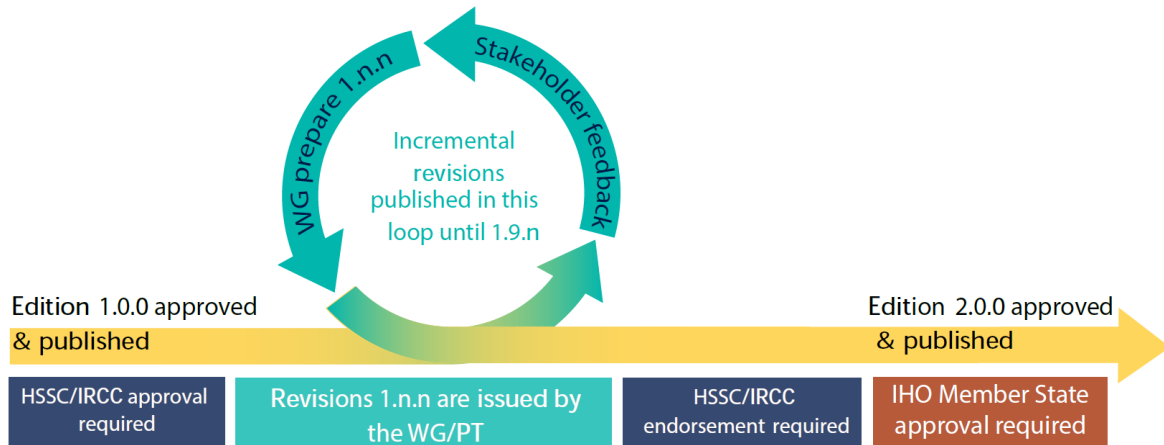

Revisions denoted as n.n.0

Clarifications denoted as n.n.n

³“n » is not limited to 9.

4.3 The following diagrams illustrate the development, consultation and approval processes for IHO standards:

Review Cycle for WG/PT Development Phase (Edition 1 to Edition 2)

The typical life cycle of an IHO standard incorporating a Development Phase:

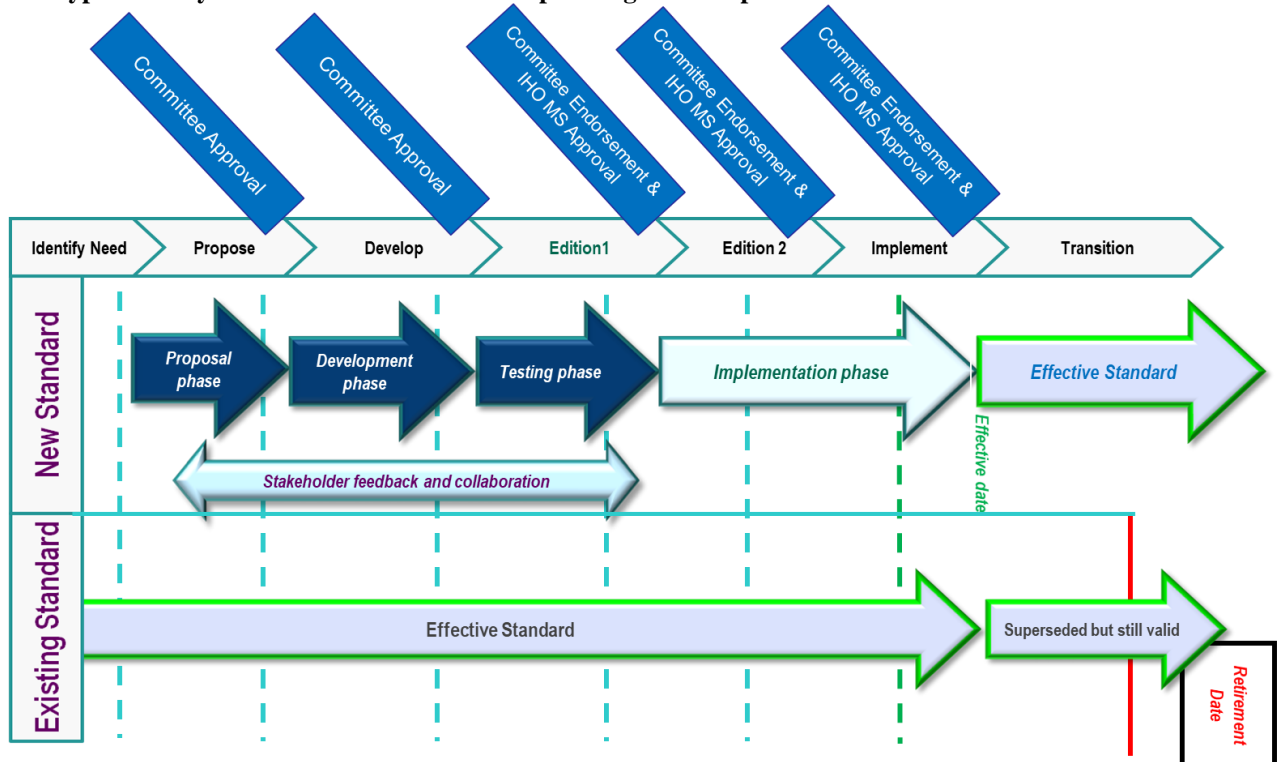

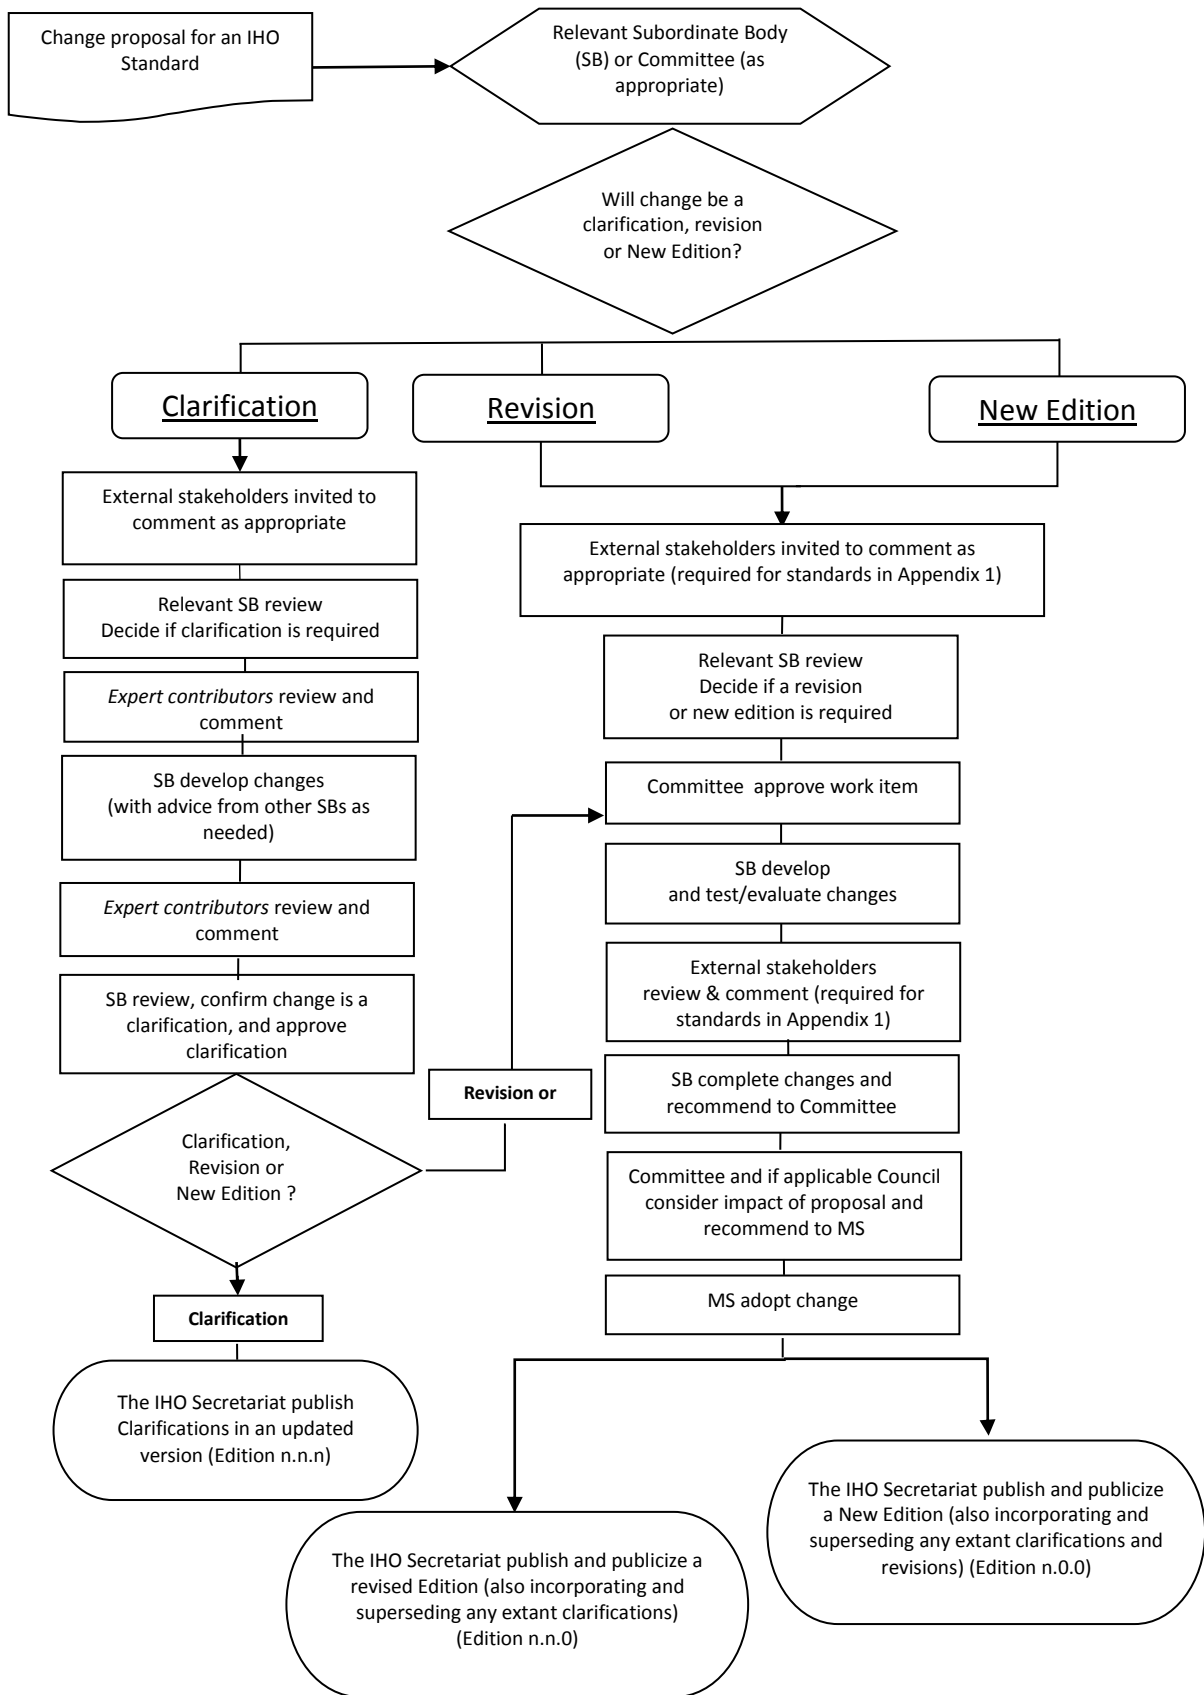

Diagram –Changes to IHO Standards – General Case

APPENDIX 1

IHO standards that are subject to the approval process as described in paragraph 1.2.a.

Number	Name	Relevant maintenance body
B-12	Guidance on Crowdsourced Bathymetry	CSBWG
S-5A	Standards of Competence for Category "A" Hydrographic Surveyors	IBSC
S-5B	Standards of Competence for Category "B" Hydrographic Surveyors	IBSC
S-8A	Standards of Competence for Category "A" Nautical Cartographers	IBSC
S-8B	Standards of Competence for Category "B" Nautical Cartographers	IBSC
S-23	Limits of Oceans and Seas	Informal Consultation when/if required
S-44	IHO Standards for Hydrographic Surveys	WG/PT when/if required
S-52	Specifications for Chart Content and Display Aspects of ECDIS	ENCWG
S-52 Annex A	IHO ECDIS Presentation Library	ENCWG
S-52 Appendix 1	Guidance on Updating the ENC	WG/PT when/if required
S-57	IHO Transfer Standard for Digital Hydrographic Data	ENCWG
S-57 Appendix B.1	ENC Product Specification	ENCWG
S-57 Appendix B.1 Annex A	Use of the Object Catalogue for ENC	ENCWG
S-57 Supplementary Information N°3	Supplementary Information for the encoding of S-57 Edition 3.1 ENC Data	ENCWG
S-58	Recommended ENC Validation Checks	ENCWG
S-61	Product Specifications for Raster Navigational Charts (RNC)	ENCWG
S-63	IHO Data Protection Scheme	ENCWG/S-100WG
S-98	Interoperability Specification for Navigation Systems	S-100WG
S-99	Operational Procedures for the Organization and Management of the S-100 IHO Geospatial Information Registry	S-100WG
S-1nn (when adopted)	S-100 based IHO Product Specifications	Ad hoc WGs and PTs

APPENDIX 2

IHO standards that are subject to the approval process as described in paragraph 1.2.b.

Number	Name	Relevant maintenance body
B-6	Standardization of Undersea Feature Names (Guidelines Proposal Form Terminology)	SCUFN
B-12	Guidance on Crowdsourced Bathymetry	CSBWG
S-4	Regulations for INT Charts and IHO Chart Specifications	NCWG
S-11 Part A	Guidance for the Preparation and Maintenance of INT Chart and ENC schemes	NCWG
S-12	Standardization of List of Lights and Fog Signals	NIPWG
S-32 **	Hydrographic Dictionary	HDWG
S-32 Appendix 1	Glossary of ECDIS-Related Terms	HDWG
S-44	IHO Standards for Hydrographic Surveys	WG/PT when/if required
S-49	Standardization of Mariners' Routeing Guides	NIPWG
S-60	Users Handbook on Datum Transformations involving WGS 84	WG when/if required
S-61	Product Specifications for Raster Navigational Charts (RNC)	ENCWG
S-62 **	List of Data Producer Codes	ENCWG
S-66	Facts about Electronic Charting and Carriage Requirements	ENCWG
S-67	Mariners' Guide to Accuracy of Depth Information in Electronic Navigational Charts (ENC)	DQWG
S-97	Product Specification Guide Book	S-100WG
S-100	IHO Universal Hydrographic Data Model	S-100
C-17	Spatial Data Infrastructures: "The Marine Dimension" - Guidance For Hydrographic Offices	MSDIWG
C-51	A Manual on Technical Aspects of The United Nations Convention on the Law of The Sea - 1982	ABLOS

** Follows IHO GI Registry for updating

APPENDIX 3

Guidance on Conduction of an Impact Study

Description of the purpose of the study (testable hypotheses)

An impact study plan should include the general description of the impact assessment and a plan to conduct the study. The general description should specify a set of hypotheses about the outcomes and impacts of the study. The impact should consider all the outcomes, also the updating process of existing data.

There are three distinct levels of potential impact that a change to the standard might have:

- Does the new version of a standard impact on the market and business procedures?
- Does the new version of a standard impact on producing offices/agencies/institutions?
- Does the new version of a standard impact on the stakeholders?

Specification of the result assessment methods

The intended assessment method should be proposed by the WG for HSSC/IRCC endorsement before the survey is initiated. This ensures that the assessed results are transparent and that misinterpretations will be prevented.

Identification of a minimum of measurable indicators

Measurable indicators should be defined that can be used to determine potential impacts to the community. The results of the survey questionnaire will populate the indicators. The impact study shall take into consideration the following minimum set of subject items:

- Impact on software development;
- Impact on equipment development;
- Impact on data distributors;
- Cost/effectiveness of the implementation;
- Readiness of implementation.

Suitability of impact study questions

The success of a survey depends on the questions asked. Thus, the set of the survey questions has to be checked to determine whether they are useful for this purpose. This check should be conducted by professional survey experts.

Identification of potential stakeholders

An impact study should be done in two parts. The first part should be the feasibility study and conducted before the development starts. This study should address the feasibility of the intended Product Specification. The second part is an impact study should be initiated before the release and should address the potential users. The audience of both studies can be different. The first study should approach the interested parties, whereas the latter should approach software developers, OEMs and Member States.

A list of potential stakeholders is being maintained by the IHO Secretariat and should be available. The initiator of the impact study should select those stakeholders on which the intended new Standard has significant impact. It is recommended to approach the following stakeholders:

- IHO Member States,

- International organizations,
- Software developers,
- Equipment manufacturers,
- RENCs,
- Product/data distributors,
- End users (hydrographic community),
- End users (marine community)

Identification of appropriate survey tools and methods

Professional online tools should be used for the survey. Stakeholders should be approached by e-mail. The survey should be conducted under the supervision of the initiating Organisation or IHO Working Group. To assist stakeholders who are uncertain about specific survey questions, the initiating Organisation should provide point of contact information for the survey duration.

Specification of the survey duration

The survey time should be limited to 3 months as the maximum duration.

Specification of requested actions and dissemination of the findings

The findings of the impact study should be summarized and the findings should be made public on the IHO website. The in-depth analyses should be conducted by the initiating Organisation and be supervised by the IHO Secretariat. This ensures that the analytic capacity is available and that the results will be compiled correctly. The raw data should be stored for backward research and for transparency in a repository hosted by the IHO Secretariat. The cleaned data should be provided in tables, diagrams or other appropriate formats. The final report and the outcome of the study should be forwarded to the IHO Secretariat and should be publicly available on the IHO website at an appropriate place. This will ensure the further use of the study results.

**MEMBER STATES' RESPONSES TO IHO CL 32/2019 AND COMMENTS FROM THE
CHAIRS OF THE HSSC, IRCC AND THE IHO SECRETARIAT
ADOPTION OF REVISION OF IHO RESOLUTION 2/2007, AS AMENDED**

Canada (Vote = YES)

CA approves the proposed revised version of IHO Resolution 2/2007 with one comment. It is noted that in the clean version sent with the CL, that S-61 appears in the lists in both Appendix 1 and 2. From the discussion at HSSC11 it was understood by CA that this duplication would be removed. Please clarify.

Comments from HSSC/IRCC Chairs and Secretariat:
Agree. See comment made in response to Chile.

Chile (Vote = YES) – Original comment in Spanish

1. The paragraphs 2 and 4 [of the IHO CL 32/2019] are non consistent. In fact, paragraph 2 reads: "the versions currently in force are now duly recognized and have been approved at the level of HSSC / IRCC and of the Council ". While paragraph 4 says:" ... taking into account the approval of the changes in principle by the Council." Therefore, it is not clear whether the Council approved or not the Resolution. This must be specified.

Comments from HSSC/IRCC Chairs and Secretariat:

The *approval* of the revised Resolution is the privilege of Member States, not of the Council. As indicated in the References of the IHO CL 32/2019, the Council at its 2nd meeting *endorsed* the reasons, the rationale of the changes to be made to the Resolution and the general principles and tasked the HSSC/IRCC to implement them in the most efficient way. These changes, in line with the endorsement of the Council, were discussed, prepared and consolidated in the appropriate working groups and finally endorsed at the 11th meetings of HSSC and IRCC. For efficiency purposes, it was then followed by IHO CL 32/2019.

2. B-12 Guidance on crowd-sourced bathymetry must be moved from Appendix 1 to Appendix 2. The content and purpose of this publication does not require an impact study when it will be amended. This publication is only a "Guidance".

Comments from HSSC/IRCC Chairs and Secretariat:
Agreed.

3. S-44 IHO Standards for Hydrographic Surveys must be moved from Appendix 2 to Appendix 1. It is necessary to conduct an impact study when this publication, which constitutes a "Standard" will be amended.

Comments from HSSC/IRCC Chairs and Secretariat:
Agreed.

4. S-61 Product Specifications for Raster Navigational Charts (RNC) must appear either in Appendix 1 or in Appendix as it currently appears in both. It is suggested to leave it in 2 since the existence of raster charts should be decreasing to the extent that the ENCs covering the same area are available.

Comments from HSSC/IRCC Chairs and Secretariat:

Agreed for the reasons given by Chile. Same issue raised by Canada, Colombia and Russian Federation.

Colombia (Vote = YES) – Original comment in Spanish

Colombia supports the revised version. However, there are the following concerns: Why the S-61 is in both Appendixes? And under which Appendix the amendments to the publications S-53, S-62, S-64 and S-65 will be made?

Comments from HSSC/IRCC Chairs and Secretariat:

Agreed for S-61 See comment made in response to Chile.

For S-53, Decisions 13 and 14 from IRCC-7 are reported below for ease convenience.

- IRCC7/13: *the IRCC endorsed the proposed procedure for the maintenance of the IHO Publication S-53 which is to place the relevant annex to MSC.1/Circ.1310/Rev.1 under the cover of IHO S-53 and its Preface*
- IRCC7/14: *the IRCC endorsed the proposal described in doc IRCC7-08B2, to submit proposed revised texts to MSI documents directly to IMO by the IHB due to the tight timeline for submission to the IMO.*

In other words, S-53 is "owned" by the IMO and the maintenance process is under its remit. For S-62: Agreed. It has been added with a footnote identical to the one used for S-32 as this publication will soon be incorporated, managed and maintained through the IHO GI Registry. S-64 and S-65 were removed from the lists during the review process of the Resolution following the proposals made by the ENCWG, considering that they can be maintained, principally for clarifications, directly under their responsibility. As it is the case for other non-listed Standards and Publications, new Editions will be submitted to the approval of Member States after endorsement by the relevant Committees.

Republic of Korea (Vote = YES)

We propose to add "after the transition period" at the end of paragraph 3.1.9. This is because previous versions of S-100 of which other product specifications are based on could remain effective at the same time until they go through transition to the updated version of S-100. The proposed addition intends to clarify the withdrawal of superseded standards after the transition is completed.

Comments from HSSC/IRCC Chairs and Secretariat:

Agreed as it provides a useful clarification and remains consistent with paragraph 3.1.8.

Russian Federation (Vote = YES)

Please take notice that the IHO Publication S-61 - Product Specifications for RNC- is included both in Appendices 1 and 2 to the proposed revised version of the IHO Resolution 2/2007. We propose the deletion of the S-61 from Appendix 2

Comments from HSSC/IRCC Chairs and Secretariat:

Noted. See comment made for S-61 in response to Chile.
