STANDARDS OF COMPETENCE FOR CATEGORY "A" HYDROGRAPHIC SURVEYORS

Publication S-5A First Edition Version 1.0.2 - June 2018

Published by the International Hydrographic Organization 4b, quai Antoine 1er, B.P. 445 MC 98011 Monaco Cedex Principauté de Monaco E-mail: info@iho.int Web: www.iho.int

Comments arising from the experience gained in the application of the guidance are welcome. They should be addressed to the Chair of the International Board on Standards of Competence for Hydrographic Surveyors and Nautical Cartographers at the above address. This document is published periodically. Please check with IHO for the latest edition, including current amendments.

Copyright in some of the material in this publication may be owned by another party and permission for the translation and/or reproduction of that material must be obtained from the owner.

This document or partial material from this document may be translated, reproduced or distributed for general information, on no more than a cost recovery basis. Copies may not be sold or distributed for profit or gain without prior written agreement of the IHO and any other copyright holders.

In the event that this document or partial material from this document is reproduced, translated or distributed under the terms described above, the following statements are to be included:

"Material from IHO publication [reference to extract: Title, Edition] is reproduced with the permission of the International Hydrographic Organization (IHO) Secretariat (Permission No/...) acting for the International Hydrographic Organization (IHO), which does not accept responsibility for the correctness of the material as reproduced: in case of doubt, the IHO's authentic text shall prevail. The incorporation of material sourced from IHO shall not be construed as constituting an endorsement by IHO of this product."

"This [document/publication] is a translation of IHO [document/publication] [name]. The IHO has not checked this translation and therefore takes no responsibility for its accuracy. In case of doubt the source version of [name] in [language] should be consulted."

The IHO Logo or other identifiers shall not be used in any derived product without prior written permission from the IHO.

1. INTRODUCTION

All components of the hydrographic surveying and nautical cartography profession face challenges as to how best to ensure the continuance of high standards and how best to ensure the continuation of best practices based on minimum standards of competence world-wide. In order to achieve these objectives, three international organizations (FIG, IHO and ICA) have developed Standards of competence that institutions or professional bodies may adopt for their educational/training programmes and competency schemes.

Standards indicate the minimum competences necessary for hydrographic surveyors. Standards recognize two levels of competence. Category "A" programmes introduces competences from the underlying principles level. Category "B" programmes introduce the competences from a practical level.

The intention is that a Category "A" individual with appropriate experience, would be a senior professional in their chosen field (government, industry, academia). Category "B" individuals with appropriate experience would be technical professionals leading and delivering products and services to meet specifications and outcomes.

2. **DEFINITIONS**

2.1 Subjects, topics, and elements

The S5-A standard contains the following list of *Basic subjects*, *Foundation Science* subjects and *Hydrographic Science subjects*:

B1: Mathematics, statistics, theory of observations	7
B2: Information and Communication Technology	
B3: Physics	9
B4: Nautical science	
B5: Meteorology	
F1: Earth Models	
F2: Oceanography	
F3: Geology and geophysics	
H1: Positioning	
H2: Underwater Sensors and Data Processing	
H3: LiDAR and Remote Sensing	
H4: Survey Operations and Applications	
H5: Water Levels and Flow	
H6: Hydrographic Data Acquisition and Processing	
H7: Management of Hydrographic Data	
H8: Legal Aspects	
CMFP: COMPLEX MULTIDISCIPLINARY FIELD PROJECT	

Topics and Elements:

- Each Foundation Science, Hydrographic Science or Basic *subject* comprises a list of *topics* which are denoted by Bx.y, Fx.y, or Hx.y;
- Each *topic* contains *elements* which are denoted by Bx.y<c> Fx.y<c> or Hx.y<c>.

For example, the *subject* H1 "Positioning" contains the *topic* H1.1 Vessel and sensor reference frames that has the *element* H1.1a "Common reference frames for sensors".

2.2 Learning outcomes and list of content

It is important to understand that each *element* is associated with:

- one or more intended *learning outcomes*, that a student should be able to achieve on completion of the programme. All *learning outcomes* should be assessed. This may be done through one of, or a combination of, the following: examination, assessed exercise or presentation, laboratory report, or final project work.
- a list of *content*. This list is associated with one or more *learning outcomes* and describes the theoretical knowledge or practical/technical context which the course syllabi should address in order to meet a particular *learning outcome*.

3. Programme preparation and submission

The preparation of a programme submission to the IBSC should be done in accordance with the document entitled GUIDELINES FOR THE IMPLEMENTATION OF THE STANDARDS OF COMPETENCE FOR HYDROGRAPHIC SURVEYORS. This document is available from the IHO website: <u>www.iho.int</u> \rightarrow Standards & Publications.

The cross reference table is a mandatory requirement for a programme submission and **MUST** be completed. A template is specified and is available from the IHO website: <u>www.iho.int</u>

1D	One-dimensional
2D	Two-dimensional
3D	Three-dimensional
А	Advanced (level of knowledge)
ADCP	Acoustic Doppler Current Profiler
AIS	Automatic Identification System
ASV	Autonomous Surface Vehicle
AUV	Autonomous Underwater Vehicle
В	Basic (level of knowledge)
CAD	Computer Aided Design
CMFP	Complex Multidisciplinary Field Project
CW	Continuous Wavelength
DOP	Dilution of Precision
ECDIS	Electronic Chart Display and Information System
ECS	Electronic Chart System
ENC	Electronic Navigational Chart
EPIRB	Emergency Position Indicating Radio Beacon
F	Fundamental Sciences Subjects
FIG	International Federation of Surveyors
FOG	Fiber Optic Gyroscope
GEBCO	General Bathymetric Chart of the Oceans
GIS	Geographical Information System
GK	Gauss-Krüger
GLONASS	GLObal NAvigation Satellite System
GMDSS	Global Maritime Distress and Safety System
GNSS	Global Navigation Satellite System
GPS	Global Positioning System
GRS80	Geodetic Reference System (1980)
H	Hydrographic Sciences Subjects
HAT	Highest Astronomical Tide
I	Intermediate (level of knowledge)
IBSC	International Board on Standards of Competence for Hydrographic
ICA	Surveyors and Nautical Cartographers
ICA	International Cartographic Association
IHO	International Hydrographic Organization
IMU	Inertial Motion Unit
INS	Inertial Navigation System
LAN	Local Area Network
LAT	Lowest Astronomical Tide
LiDAR	Light Detection And Ranging
MBES	Multi-Beam Echo Sounder
MEMS	Microelectromechanical systems
MSDI	Marine Spatial Data Infrastructure
MSI	Maritime Safety Information
MSL	Mean Sea Level
NAVTEX	Navigational Telex
NMEA	National Marine Electronics Association

LIST OF ACRONYMS AND INITIALISMS USED IN THIS DOCUMENT

NtoM	Notice to Mariners
Р	Practicals (fieldwork and/or laboratories)
RAM	Random Access Memory
RINEX	Receiver Independent Exchange Format
RNC	Raster Navigational Chart
ROV	Remotely Operated Underwater Vehicle
S-44	IHO Publication S-44 - Standards for Hydrographic Surveys
S-100	IHO Publication S-100 Universal Hydrographic Data Model
S-102	IHO Publication S-102 Bathymetric Surface Product Specification
SARSAT	Search And Rescue Satellite Aided Tracking
SAS	Synthetic Aperture Sonar
SBES	Single Beam Echo Sounder
SG	Self-guided exercises (or student's personal independent work)
SQL	Structured Query Language
SSDM	Standard Seabed Data Model
Т	Theoretical (theory through lectures)
TIN	Triangulated Irregular Network
UNCLOS	United Nations Convention on the Law of the Sea
UPS	Universal Polar Stereographic
USBL	Ultra Short Baseline
UTM	Universal Transverse Mercator
WWNWS	World Wide Navigational Warning Service
XML	Extended Markup Language

S-5A STANDARDS:

INTENDED LEARNING OUTCOMES AND ASSOCIATED CONTENT

1. BASIC SUBJECTS

B1: Mathematics, statistics, theory of observations			
Topic/Element	Content	Learning outcomes	
B1.1 Geometry a	nd Linear Algebra		
B1.1a Geometry (B)	(i) Conic Sections, geometry of the ellipse and of the ellipsoid.(ii) Parametric equations of curves	Express curves and surfaces in parametric form.	
	and surfaces.	Compute lengths and coordinates on an ellipse.	
B1.1b Linear Algebra	 (i) Vector and affine spaces, vector and inner products, norms. 	Derive and compute 2D and 3D transformations, as typically involved in geodesy, surveying and survey data geo-	
(1)	 (ii) Linear operators, matrix representation, composition, transpose. 	referencing.	
	 (iii) Translations, rotations, coordinate transformations, similitudes, orthogonal projection. 		
B1.1c	(i) Systems of linear equations,	Solve linear equations by numerical	
Numerical	Gauss elimination.	methods in a scientific computing	
methods for	(ii) Matrix decomposition, and	environment and analyze error bounds.	
linear systems	factorization.		
of equations	(iii) Condition number of a matrix.		
(I)			
	calculus and differential equations		
B1.2a	(i) Real and vector valued	Apply differential calculus to real and	
Differential and	functions.	vector valued functions from a n-	
integral calculus	(ii) Series, Taylor expansions	dimensional vector space.	
	(iii) Gradient of a real-valued		
<i>(B)</i>	functions.	Calculate integral of classical functions	
	(iv) Jacobian matrix	and approximate numerical values.	
	(v) Integrals of real-valued		
	functions.		
	(vi) Numerical integration		
	methods.		

B1.2b Differential equations (1) B1.2c Numerical solutions of non-linear equation	(ii) N (iii) N (iii) N li (ii) It (ii) R	Linear ordinary differential quations, general solution with right hand side. Nonlinear differential quations, and linearization. Numerical methods for non- inear ordinary differential quations. terative methods. Rounding and numerical prrors.	Compute explicit solutions for linear ordinary differential equations and apply numerical methods to approximate solutions to non-linear differential equations. Apply numerical methods to find approximate solutions for non-linear equations.
-quality			
(B)		,• ,•	
B1.3 Probability B1.3a			Define probability measures derive
Probabilities and		Probability measures, density unctions	Define probability measures, derive associated formulae and calculate values
Bayesian		Aathematical expectation,	from data. (B)
estimation		variance	
	(iii) C	Covariance, correlation	Select a distribution for a given random
(B, I)		Conditional probabilities,	variable and apply a Bayesian estimation
		Bayes law	method. (I)
		Minimum mean square	
	(vi) D	Distributions including	
		ormal, chi-squared, t and F	
B1.3b Statistics		Random variables, mean,	Compute confidence intervals and
(\mathbf{I})		variance, standard deviation Estimation of mean, variance,	associated statistical measures for random variables using various distributions.
(I)		ovariance	variables using various distributions.
		Statistical testing, confidence	
		ntervals	
B2: Information	n and (Communication Technolog	y
Topic/Element	Conte	ent	Learning outcomes
B2.1 Computer		Central Processing Unit	Describe the different components of a
systems	. ,	RAM, data storage devices and	real-time data acquisition system,
		tandards	including various modes of
(I)	. ,	Communication board, serial	communication and time-tagging.
		inks, communication ports nd standards, buffers,	Describe the role of a device driver and its
		Ethernet links, data	Describe the role of a device driver and its relation to data exchange.
		ransmission rates	relation to data exchange.
		Communication protocols	Create/Configure a data link and evaluate
	(v) C	Clocks, clocks drift, time	any time delays across the link.
		agging and synchronization of lata	
		Operating systems	
	(vii) D	Device drivers	

B2.2 Office	(i) Word processors	Use classical office work software suites.
work software	(ii) Spreadsheets	Prepare a poster describing scientific or
suites	(iii) Graphics software	project results.
<i>(B)</i>		
B2.3	(i) Basic operations of a computer	Write a program or script for data format
Programming	program or script	conversion and/or basic algorithm
	(ii) Algorithms (loops, conditional	computation.
<i>(B)</i>	instructions)	
	(iii) Scientific computation environments	Configure a small network and transfer data over that network
	(iv) Application to data exchange,	data over that network
	file conversion	
B2.4 Web and	(i) Networks (LANs)	Describe the different network options
network services	(ii) Network and cloud storage	used in remote data exchange and storage
	(iii) Internet	applications.
<i>(B)</i>	(iv) Networks integrity	
	(v) Communication protocols	
B2.5 Databases	(i) File types (binary, text, XML)	Describe different types of geospatial data
	(ii) Relational databases	and their representation.
<i>(B)</i>	(iii) Geospatial databases(iv) Database management systems	Construct a database manufate it and
	and query languages	Construct a database, populate it and query its content using a database
	and query languages	language, such as SQL.
B3: Physics	I	
Topic/Element	Content	Learning outcomes
B3.1 Kinematics	(i) Angular and linear velocities,	Explain the principle and the relationship
2011 11101100	accelerations	between position, velocity and
<i>(B)</i>	(ii) Angular velocities addition	acceleration for both rotational and linear
	rules, accelerations due to	motion.
	rotational motion, Coriolis	
	Law	
B3.2 Gravity	(i) The inertial frame	Differentiate between inertial and Earth
	(ii) Newton's law, forces,	fixed frames.
<i>(B)</i>	accelerations, energy	Differentiate contan of another from and
	(iii) Center of gravity, center of instantaneous rotation	Differentiate center of gravity from center of instantaneous rotation.
	(iv) Gravitational field	or mistalitatieous rotation.
	(v) Potential fields	Develop the mathematical relationship
		between potential and acceleration in a
		gravitational field.
B3.3 Magnetism	(i) Magnetic characteristic of	Describe ferromagnetic properties and
	ferrous bodies	resulting magnetic field.
	(ii) Magnetic field	6 6

B3.4 Waves	(i) Harmonia wayas modaling and	Explain harmonics in the context of ways
B3.4 waves	(i) Harmonic waves modeling and wave parameters (amplitude,	Explain harmonics in the context of waves and resulting constructive and destructive
(\mathbf{D})	frequency, wavelength,	interferences patterns from multiple
<i>(B)</i>	celerity and phase)	waves and sources.
	(ii) Longitudinal and transverse	waves and sources.
	waves	Use the Decibel scale to define intensity
	(iii) Intensity, Decibel scale	and characterize attenuation.
	(iv) Attenuation	
	(v) Doppler effect	Explain the Doppler effect.
	(vi) Interferometric principles	Explain the Doppler effect.
B3.5	(i) Electromagnetic waves	Calculate field of view and resolving
Electromagnetic	properties and propagation	power of optics.
waves	(ii) Radiation, emission and	
	absorption	Describe aberrations.
<i>(B)</i>	(iii) Reflection, refraction,	
	diffraction	Describe the effect of wavelength on the
	(iv) Optical reflectance	propagation in a medium.
		Describe the effect of a medium in the
		propagation of an electromagnetic wave
B3.6	(i) Mirror, prisms, lenses and	Model a light ray-path through medium
Geometrical	filters	with various reflective and refractive
optics	(ii) Telescopic optics and	properties.
	magnification	
<i>(B)</i>	(iii) Snell-Descartes law	Use the characteristics of a lens to
		calculate geometrical properties of an
		image.
B3.7 Lasers	(i) Principle of lasers	Describe the operation, unique properties,
	(ii) Laser parameters (frequency,	and applications of stimulated sources of
<i>(B)</i>	wavelength)	emission.
	(iii) Types of lasers(iv) Laser attenuation	
B3.8		Describe different types of transducers
Transducers and	(i) Pressure transducers(ii) Thermal transducers	Describe different types of transducers
clocks	(iii) Types of clocks	and their calibration requirements. Describe time measurement devices in
CIUCKS	(iv) Measurement of elapsed time	relation to their drift coefficient and
<i>(B)</i>	(iv) Measurement of clapsed time	accuracy.
B4: Nautical sci	ience	
	[
Topic/Element	Content	Learning outcomes
B4.1	(i) Types of buoys and beacons	Describe the characteristics and purposes
Conventional	(ii) Radar beacons	of fixed and floating aids to navigation
aids to	(iii) AIS systems	and the use of automatic identification
navigation		systems.
(B)		
B4.2 GMDSS	(i) Sea areas	Describe the components and purpose of
	(ii) EPIRBs and SARSAT	GMDSS.
<i>(B)</i>	(iii) Digital selective calling	
	(iv) NAVTEX	
	(v) SafetyNET (vi) Promulgation of Maritime	
	(vi) Promulgation of Maritime Safety Information (MSI)	
	Safety Information (WISI)	

	(vii) World Wide Navigational Warning Service (WWNWS)	
B4.3 Nautical charts (B)	 (i) Content, datum, projection, scale and types of nautical charts (ii) Chart symbols (iii) Chart graticules 	Plan and layout a route on a nautical chart, enter/plot positions, identify navigational hazards and revise navigational plan as required.
	 (iv) Uncertainty indicators (e.g. source diagram, reliability diagram, zone of confidence, notes) 	Describe the content of a nautical chart and explain datum, projection and scale. Describe the uncertainty indicators
	(v) Navigational hazards(vi) Plotting instruments(vii) ECDIS, ENC, RNC and ECS	associated with nautical charts.
B4.4 Navigation publications (B)	 (i) Sailing directions, (ii) Light and radio lists, (iii) Tides and current tables (iv) Notice to Mariners (NtoM) 	Use content of nautical publications in a survey planning context.
	and Urgent Notice to Mariners	
B4.5 Compasses	(i) Magnetic compasses(ii) Gyros	Describe the capabilities, limitations and sources of errors of magnetic and gyro
<i>(B)</i>	(iii) Compass error and corrections	compasses.
		Determine and apply corrections for magnetic and gyro compass error.
B4.6 Emergency procedures	(i) Fire extinguishers(ii) Life preservers and cold water survival suits, life rafts	Explain the importance of the emergency equipment and procedures.
(B)	(iii) Distress signals and EPIRB(iv) Procedures for man-overboard, fire, and abandoning ship	Identify types of fire extinguishers and their use.
B4.7 Safe working practice	(i) Water-tight doors and hatches(ii) Suspended loads(iii) Enclosed spaces	Describe procedures for maintaining a safe working environment.
(B)	(iv) Working aloft, with equipment over the side, life lines.(v) Work permitting	Design safe cable routes for survey instruments.
	(vi) Securing equipment for sea(vii) Cables and antenna installation(viii)Earthing (grounding) of	Define procedures for securing equipment for heavy weather.
	electrical equipment (ix) High voltage electrical safety (x) Personal protective equipment	
B4.8 Rope and wires	(i) Types of wire and rope(ii) Characteristics (stretch,	Select and tie basic knots.
(B)	floating, strength) of ropes and wires. (iii) Basic knots	Select appropriate wire or rope.
B4.9 Towed and over the side instruments	 (i) Rosette systems and instruments (ii) ROVs, AUVs, ASVs, towed 	Specify procedures for deployment and recovery of oceanographic and hydrographic equipment.
	systems, catenary and layback	

	 Shipboard ground tackle including anchor, chain, windlass, stoppers Small boat anchoring Multiple anchors 	Describe ship and small boats anchoring and ground tackle. Explain how the final position of the vessel can be adjusted through the use of anchors.
moorings (ii	 Launch and recovery Anchors and acoustic releases Scope, wire, flotation, tension Weights 	Specify types of mooring and procedures for mooring underwater instruments.
B5: Meteorology	outout	L coming outcomes
	ontent	Learning outcomes
B5.1 Weather (i) fundamentals and observations (iii	variability of the atmosphere i) Temperature, humidity, dew-	Define physical meteorological parameters
(i' (v	 point, frost-point ii) Atmospheric pressure, winds v) Clouds and precipitations v) Rain, snow vi) Visibility, advection fog and radiation fog 	Operate instruments and sensors used to register temperature, pressure, direction and intensity of wind. Record these parameters according to internationally accepted standards.
(v	 ii) Pressure systems iii) Geostrophic winds, anabatic and katabatic winds 	Identify characteristics of weather by simple observation of the sea and the sky.
B5.2 Wind, waves and seas (in	x) Instruments and sensors used to register temperatures,	Explain the relation between atmospheric pressure, temperature and wind.
	e i	
(B) (x	 pressure, direction and intensity of wind Sea state scales, weather warning categories, wave height, periods and direction 	Describe wind circulation around pressure systems and the effect of friction
	 pressure, direction and intensity of wind Sea state scales, weather warning categories, wave height, periods and direction Synoptic charts 	^

2. FOUNDATION SCIENCE SUBJECTS

F1: Earth Models		
Topic/Element	Content	Learning outcomes
F1.1 Physical geo	odesy	
F1.1aThe gravity field of the Earth (<i>B</i>)	 (i) Newton's law of gravitation (ii) Centrifugal acceleration (iii) Gravity (acceleration) (iv) Gravity potential (v) Level or equipotential surfaces 	Describe relationships between the gravity field of the Earth, normal gravity and level surfaces.
F1.1b Gravity observations and their reduction.	 (vi) The Geoid (vii) Normal gravity and ellipsoidal models such as GRS80. (viii) Gravity anomalies (ix) Gravity observations 	Explain methods for observing gravity and computation of gravity anomalies
F1.1c Height systems and height determination (B)	 (i) Dynamic heights (ii) Orthometric heights (iii) Normal heights (iv) Level ellipsoid (v) Theoretical misclosure of a leveling loop 	Describe different height models and the role of gravity-based heights in modern levelling networks.
F1.1d Geopotential and geoidal	(vi) Geopotential models(vii) High resolution global and local geoid grids	Describe techniques used to model the Earth's geopotential.
Modelling (<i>I</i>)	(viii)Deflection of the vertical	Discuss the application and limitations of geopotential models and their verification in height determination.
F1.2 Coordinate	Systems	
F1.2a Coordinate Systems for Positioning (<i>I</i>)	 (i) Traditional geodetic datums (ii) Terrestrial reference systems and reference frames. (iii) Modern geodetic datums based on terrestrial reference frames. (iv) Datum transformation 	Explain principles of astronomic and geocentric datums together with their practical realizations.
F1.2b Datum transformation techniques	techniques including similarity transformations and grid based approaches.	Compare datum transformation methods and transform coordinates between datums and between reference frames.
(A)		Estimate transformation parameters from observations.
F1.2c Geodetic computations on the ellipsoid	 (i) Grid computations and spherical trigonometry. (ii) Forward and inverse computations for geodesic and 	Assess the various solutions available for forward and inverse computations on the ellipsoid.
(1)	normal section curves on the ellipsoid.	Compare grid and spherical methods with ellipsoidal computations.
F1.2d Three- Dimensional Geodetic Modeling	 (i) Local and global Cartesian coordinate frames. Reference to physical plumb line and ellipsoidal normal. Geoid 	Explain the mathematical model of 3D geodesy, integrating satellite and terrestrial observations.

(A)	 heights and deflections of the vertical. (ii) 3D observation equations and 3D adjustment. Laplace equation. 	Evaluate a typical hybrid network, using commercial software. Describe application of 3D Geodesy to hydrographic survey control and 3D positioning of survey vessels.
F1.3 Land surve	ying methods and techniques	
F1.3a	(i) Principles of distance	Select appropriate methods and use
Trigonometric	measurement and angle	corresponding instruments for local
surveys	measurement	positioning.
	(ii) Atmospheric and radiometric	
(I)	corrections for optical	
	measurements.	
F1.3b Existing	(iii) Calibration requirements and	Recover survey marks and associated
survey control	documentation	documentation with an appreciation for
	(iv) Sextant (in legacy context)	the datum and accuracy associated with
(I)	(v) Theodolite	the historical survey.
F1.3c	(vi) Total Station (vii) Intersection, Resection, Polar	Establish terrestrial control using GNSS
Establishing	and Traverse	in accordance with published quality
survey control	(viii)Astronomic methods for	control procedures
	determination of orientation.	
<i>(I)</i>	(ix) Establishing ground control	
F1.3d	using GNSS, distance and	Field test and use distance and angle
Instrument tests	angle measurements.	measurement instruments.
	(x) Control station recovery	
(I)	(xi) Logistical aspects of providing	Select appropriate field validation
	control	procedures
F1.3e Historical		Relate historical surveys to legacy
surveys		positioning systems.
<i>(B)</i>		
F1.4 Levelling		
F1.4a Levelling	(i) Levelling instruments	Explain the principles of operation of
instruments	(i) Total stations	instruments used in determination of
monumento	(iii) Effects of curvature and	height differences.
<i>(I)</i>	refraction	norght unreconces.
F1.4b Height	(iv) Reduction of levels and	Conduct surveys in accordance with
reduction	correction to the relevant	standards.
100001011	height datum	Standards.
(A)	(v) Calibration requirements and	Reduce elevation measurements and use
(11)	documentation	adjustment procedures.
F1.5 Map Projec	tions	augustitiont procedures.
		Classify the properties of projections.
F1.5a Map	(i) Equidistant, equal area, azimuthal and conformal	Classify the properties of projections.
Projections	projections.	Liss nonemptors associated
(Λ)	(ii) Properties and applications of	Use parameters associated with map
(A)	cylindrical, conical and	projections to compute distortion and
	stereographic projections.	apply corrections between geodetic and
	(iii) Grids, graticules and	grid coordinates.
	associated coordinates.	
	associated coordinates.	Use geometrical properties of map
		projections to contrast and compare the

	(iv) Convergence, scale factors and arc to chord corrections.	use of different projections for different applications.
	(v) Worldwide cartographic	uppheations.
	systems Including UTM, GK	
	and UPS.	
F1.6 Trigonomet	ry and least-squares	
F1.6a	(i) Plane trigonometry	Apply plane and spherical trigonometry to
Trigonometry	(ii) Sphere, great circle, rhumb	surveying problems.
$\langle \mathbf{D} \rangle$	lines, spherical triangles and	
(B) F1.6b Theory of	spherical excess(i) Measurements and observation	Differentiate between acqurecy precision
observations	equations	Differentiate between accuracy, precision, reliability and repeatability of
observations	(ii) Notion of uncertainty related	measurements. Relate these notions to
(I)	to observations	statistical information.
(-)	(iii) Accuracy, precision,	
	reliability, repeatability	Apply the variance propagation law to a
	(iv) Linearized observation	simple observation equation, and derive
	equations and variance	an estimate uncertainty as a function of
	propagation law (v) Propagation of uncertainty in	observations covariances.
	(v) Propagation of uncertainty in observations through multiple	
	measurements	
	(vi) Relative and absolute	
	confidence ellipse	
F1.6c Least	(i) Least squares principle	Solve geodetic problems by least squares
squares	(ii) Covariance of observation	estimation.
	(iii) Weighted least squares	
(A)	(iv) Orthogonal least square	Determine quality measures for least
	(v) Total Least Square(vi) Problems with explicit	square solution to geodetic problems, to include reliability and confidence levels.
	solutions	include remainity and confidence levels.
	(vii) Condition equations	
	(viii)Covariance of estimated	
	parameters	
	(ix) Unit variance factor estimate	
	(x) Internal and external reliability	
F2: Oceanogra		
Topic/Element	Content	Learning outcomes
=	eanography and measurements	
F2.1a Water	(i) Global ocean circulation (ii) Mechanisms of regional	Use the knowledge of spatial and
masses and	(ii) Mechanisms of regional circulation.	temporal variability of the water masses to plan surveys.
circulation	(iii) Global and local water masses	pian surveys.
	and their physical properties.	Establish a water column sampling regime
(I)	(iv) World oceanographic	for use within survey operations.
	databases	
	(v) Seasonal and daily variability	
	of temperature and salinity	
	profiles.	
	(vi) Types of estuaries and their associated salinity profiles.	
	associated samily promes.	
	l	

F2.1b Physical	(i) Sound Velocity Profilers,	Specify oceanographic sensors to measure
properties of sea	Conductivity, Temperature,	physical properties of sea water.
water	Depth sensors, Expendable	
	probes. (ii) Units used in measuring and	Apply appropriate equation to estimate
(A)	describing physical properties	density and speed of sound.
	of sea water, normal ranges	Construction damage 1 mm C1.
	and relationships including:	Create a sound speed profile.
F2.1c	salinity, conductivity,	Specify equipment and procedures for
Oceanographic	temperature, pressure, density.	oceanographic measurement to meet survey requirements.
measurements	(iii) Sound speed equations	survey requirements.
	(iv) Oceanographic sampling.	Configure and use eccenographic sensors
(I)	(v) Oceanographic sensors:	Configure and use oceanographic sensors and sampling equipment.
	Current meters	and sampning equipment.
	ADCP	
	• Turbidity sensors	
	and need for calibration	
F2.1d Waves	(i) Wave measurement by radar	Outline wave generation processes.
	and buoys	
<i>(B)</i>	(ii) Wave parameters and	Describe the principles of wave
	elements involved in the wave	measurement systems.
	growth process including fetch	
	and bathymetry	Describe how beach survey monitoring
	(iii) Tsunamis	strategies are related to wave regimes.
	(iv) Breaking waves, long-shore	
	drift and rip current processes	
	in relation to beach surveys.	
	(v) Beach profiles	
F3: Geology an		
F3: Geology an Topic/Element		Learning outcomes
	d geophysics	Learning outcomes
Topic/Element F3.1 Geology	d geophysics Content	
Topic/ElementF3.1 GeologyF3.1a Earth	d geophysics Content (i) Plate tectonics and other Earth	Describe the structure of the Earth and
Topic/Element F3.1 Geology	d geophysics Content (i) Plate tectonics and other Earth processes	Describe the structure of the Earth and explain the relationship between Earth
Topic/ElementF3.1 GeologyF3.1a Earthstructure	d geophysics Content (i) Plate tectonics and other Earth processes (ii) Earthquakes zones	Describe the structure of the Earth and
Topic/ElementF3.1 GeologyF3.1a Earth	d geophysics Content (i) Plate tectonics and other Earth processes (ii) Earthquakes zones (iii) Types of continental margins	Describe the structure of the Earth and explain the relationship between Earth processes and bathymetric /topographic
Topic/ElementF3.1 GeologyF3.1a Earthstructure	d geophysics Content (i) Plate tectonics and other Earth processes (ii) Earthquakes zones	Describe the structure of the Earth and explain the relationship between Earth processes and bathymetric /topographic
Topic/ElementF3.1 GeologyF3.1a Earthstructure	 d geophysics Content (i) Plate tectonics and other Earth processes (ii) Earthquakes zones (iii) Types of continental margins (iv) Ocean basins, trenches, ridges 	Describe the structure of the Earth and explain the relationship between Earth processes and bathymetric /topographic

sediment identification for
mapping, shallow sedimentary
channels.
(vii) Principles of seismic
stratigraphy

3. <u>HYDROGRAPHIC SCIENCE SUBJECTS</u>

H1: Positioning		
Topic/Element	Content	Learning outcomes
H1.1 Vessel and	sensor reference frames	
H1.1a Common reference frames for sensors	(i) Identification of a common reference point and reference frame for the vessel(ii) Centre of rotation for the	Specify a suitable vessel reference frame for sensor offsets and configure software to use values accordingly.
(A)	 vessel (iii) Centers of measurement for sensors (iv) Sensor offset measurements. 	Reconcile the application of offsets between various hardware and software components of the survey system.
H1.1b Integration of reference frames (<i>A</i>)	 (i) Sensor body reference frames. (ii) Transformations between reference frames associated with sensor bodies, the vessel and local geodetic frame. 	Define and apply appropriate transformations between the different frames in the navigation solution.
H1.2 GNSS posit	ioning	
H1.2a GNSS Signals	 GNSS Systems, such as GPS, GLONASS, Galileo, Beidou, etc. 	Describe the structure of signals broadcast by GNSS and explain the impact of the atmosphere on these signals. (<i>I</i>)
(I, B)	 (ii) Signal structure. (iii) Frequencies, time keeping and logistical segments: Ground, Space, User. (iv) Broadcast almanac ephemerides and precise orbit 	Describe the characteristics of different components of GNSS and detail sources of information relating to the orbital and timing parameters. (B)
	 (v) Ionospheric and tropospheric effects. (vi) Earth rotation information. 	
H1.2b GNSS observables	 (i) Code phase and carrier phase observables, mixed observables. 	Write observation equations for different GNSS observables and develop mathematical and stochastic models for
(A)	 (ii) Differencing using carrier phase including single, fixed and float double, and triple differences. 	the solutions that include earth rotation and ionospheric elements.
	(iii) Corrections for earth rotation, ionosphere, and troposphere.	
H1.2c Relative and absolute techniques	(i) Differential and Wide area augmentation services.(ii) Real time kinematic and post-	Evaluate and select appropriate system for applications by aligning survey requirements with capabilities and
(A)	processed kinematic techniques. (iii) Precise Point Positioning	limitations of GNSS techniques
	techniques and services. (iv) System selection in alignment with survey requirements.	

111.0.1		
H1.2d	(i) Antenna installation to	Specify, supervise and test the installation
Installation and	consider coverage, stability	of GNSS hardware and software for both
operation	and multipath environment.	inshore and offshore operations.
	(ii) Levels of redundancy in	
(A)	systems and communications	
	(iii) Data exchange formats and	
	protocols such as RINEX and NMEA	
III 2. On ality		Develop a guality control plan for CNSS
H1.2e Quality control	(i) Sources of error including multipath, atmospheric effects,	Develop a quality control plan for GNSS
control	base station network, sensor	operations including risk management associated with GNSS components and
	offsets, etc.	services.
(A)	(ii) Measures and monitoring of	services.
	precision (DOP variations) and	Assess the performance of CNSS
	reliability (statistical testing).	1
	(iii) Integrity monitoring of base	positioning against the defined quality control criteria.
	station data.	control enterna.
	(iv) Verification checks between	
	systems or against known	
	points.	
H1.3 Inertial nav	1	
H1.3 mertiar nav	(i) Accelerometers technology	Describe accelerometer technologies, and
Accelerometers	(i) Acceleronieters technology (pendulums, vibrating	differentiate between inclinometers,
and gyroscopes,	elements)	compass and gyroscopes. Describe error
inclinometers,	(ii) Gyroscopes (FOG, Ring laser,	sources associated with these devices.
and compass	Sagnac effect)	sources associated with these devices.
and compass	(iii) MEMS	
(A)	(iv) Inclinometers	
(21)	(v) Flux gate compass	
H1.3b	(i) Technologies available for	Describe the technologies used in inertial
Strapdown	IMU measurements through	measurements and quantify associated
inertial	gyroscopes and accelerometers	navigation errors.
measurement	(ii) Sources of error in inertial	of the second seco
units	sensors: bias; scale factor; and,	Undertake static alignment of an IMU.
	noise.	
(A)	(iii) The inertial navigation	Develop strategies for mitigating induced
()	equation and error equations.	heave and select filter parameters for
	(iv) Static alignment of the IMU.	heave estimation.
	(v) Heave estimation from gyros	
	and accelerometers.	
	(vi) Induced heave.	
H1.3c Kalman	(i) Bayesian estimation	Apply Kalman filtering methods to a
filtering	(ii) State representation of a	dynamic observation process.
	dynamic observation equation,	_
(I)	observability	Define the parameters of a Kalman Filter
	(iii) Continuous, Semi-discrete and	in relation with sensors performances and
	discrete Kalman filtering	dynamic model uncertainty.
	(iv) Optimal smoothing	
		Differentiate between stationary and non-
		bifferentiate between stationary and non- stationary observation processes
H1.3d Aided	(i) INS and GNSS loosely and	
H1.3d Aided inertial	 (i) INS and GNSS loosely and tightly coupled solutions. 	stationary observation processes
	-	stationary observation processesDescribe the role of aiding sensors to

(I)	(iii) Dynamic and aided alignment of INS by Kalman filtering.(iv) INS solutions from IMU and	Apply appropriate settings to filtering and smoothing for aided navigation solutions.
	other sensors by Kalman	
H1.4 Subsea posi	filtering and smoothing.	
H1.4a Acoustic	(i) Long base line	Describe the signal structure and
positioning principles	(i) Long blac line(ii) Short baseline(iii) Ultra-short baseline(iv) Doppler velocity log	observables of mobile and fixed acoustic positioning devices.
(A)	(v) Transponders(vi) Acoustic modems(vii) Subsea INS	Relate observables and platform orientation to relative positions through observation equations.
H1.4b Acoustic positioning systems	(viii)Water column structure(ix) Acoustic ray multipath(x) Time synchronization	Explain how acoustic positioning observables, orientation and surface positioning data are used to achieve subsea rover spatial referencing.
(A)		Specify the deployment and calibration methods for fixed and mobile acoustic positioning systems.
H1.4c Acoustic positioning error analysis (<i>I</i>)		Compute the total propagated uncertainty in acoustic positioning, accounting for time, sound speed and other observable errors.
H1.4d. Acoustic positioning applications (<i>B</i>)	 (i) Towed vehicles (ii) Autonomous vehicles (iii) ROVs (iv) Surface vessel dynamic positioning (v) Engineering and installation (vi) Metrology 	Identify appropriate acoustic positioning solutions for different applications, considering potential sources of error.
H1.5 Line keepin	lg	
H1.5a Track guidance (<i>B</i>)	 (i) Track guidance and route following information systems. (ii) Tolerances for track guidance in compliance with survey specifications and positioning system precision. 	Specify the methods to be used in maintaining a survey vessel or remote survey system on a planned survey line or route and meeting sounding density specifications.
	(iii) Maintaining uniform sounding density in swath systems.(iv) The impact of the environment on the line keeping and data	Describe what may occur if the real-time navigation systems are interrupted during a survey.
	density(v) Options for accepting filed data when the navigation or line keeping is not optimal.	Explain how to compensate and mitigate for the effects of strong currents across a survey area/in a river estuary.

H2: Underwater Sensors and Data Processing		
Topic/Element	Content	Learning outcomes
H2.1 Underwater acoustics		
H2.1a Transducers and generation of	 (i) Piezoelectric principles (ii) Transducer arrays design, beam-forming, side lobes. 	Analyze the effect of transducer design on beam characteristics and performance.
acoustic waves (I)	(iii) Transducer Quality factor(iv) Plane and spherical waves in terms of wavelength,	Describe the design and use of multi- frequency, wide-bandwidth and parametric transducers.
	 amplitude and frequency. (v) Absorption, spherical spreading (vi) Frequency, attenuation relationship to range (vii) Acoustic units, intensities and 	Differentiate between chirp and CW transmission, and characterize their relative performance. Determine source level from typically
	sound levels (viii) Signal to noise ratio	available sonar specification.
H2.1b Propagation of acoustic waves	(ix) Active Sonar Equation including sound source, causes of propagation loss in relation	Explain how properties of the acoustic medium and source frequency affect the propagation of acoustic waves.
(A)	to water properties together with characteristics of the sea floor and targets, acoustic	Calculate propagation loss in practical situations, using medium property observations and available tables.
H2.1c Acoustic noise	 noise level and directivity (x) Continuous Wavelength (CW), Chirp transmission (xi) System parameters including 	Identify the sources of noise and describe the effect of noise on echo sounding. Define the directivity index.
(1)	bandwidth, pulse length, pulse repetition rate, gain, detection threshold.	Calculate the effect on sonar range of a variety of noise conditions and sonar directivity circumstances.
H2.1d Reflection, scattering and	(xii) Range resolution and spatial resolution.(xiii) Dynamic range, clipping and	Define the characteristic impedance of an acoustic medium.
system performance.	saturation (xiv) Sound speed profile and gradient (xv) Ray-tracing theory	Assess the effects of varying seafloor composition, texture, and slope on echo strength.
H2.1e Refraction and ray-tracing.	(xvi) Sound channel (xvii) Non horizontal sound speed layers	Use the sound speed profile to compute the path of sound ray through the water column.
(A)		
H2.2 Single beam systems		
H2.2a Single beam echo sounders principles (1)	 (i) Single beam, split beam and dual beam concepts (ii) Beam footprint (iii) Specification of a single beam echo sounder. (iv) Bottom detection principles 	Explain the principles of operation of a single beam sounder detailing how acoustic parameters influence sounder returns.
H2.2b Single beam returns interpretation	(matched filtering, thresholding) and range resolution.	Interpret single beam returns including analysis of full echo envelopes and features of the sea bed and water column.

	(a) Enll ash a secologic estimation of	T1
	(v) Full-echo-envelope returns and bottom characterization	
(A)		
H2.2c Single	(i) Components of a single beam	Specify survey system to perform a single
beam survey	echo sounder system to	beam survey in accordance with
system	include: positioning system,	application requirements.
	motion sensor, acquisition	
(A)	system, source of reference	Select appropriate range, scale, frequency
	level (i.e. tide gauge, GNSS)	and pulse for specific applications in
	(ii) Acoustic parameters of single	relation to spatial resolution, bottom
	beam echo-sounders	penetration, depth of water and water
	(iii) Reduction of soundings to the	column analysis.
112.24	specified datum	Specify measuring workflow for single
H2.2d	(i) Systematic effects in system	Specify processing workflow for single
Processing of	components:	beam data. (I)
single beam data	• Single Beam Echo-	
	Sounders	Integrate and merge data of various
(I, A)	• IMU/INS	sources and of various types in preparation
	• Sound speed profilers and	for product generation. (A)
	other peripheral sensors	
	(ii) Single beam echo sounders	
	data processing workflows	
H2.3 Sonar imag	ery systems	
H2.3a Side-scan	(i) Principles, components and	Evaluate, select and configure side-scan
sonar systems	geometry of side scan sonar	sonar in alignment with survey
	systems	operational needs.
(A)	(ii) Range, beam angle	
	(iii) Resolution in relation to beam	
	width, sampling rate angle of	
	incidence and pulse length.	
H2.3b Synthetic	(i) Principles of synthetic aperture	Discuss and compare the use of SAS with
Aperture Sonar	imaging	that of more conventional sonar imaging
		systems.
(I)		<u> </u>
H2.4 Swath echo	sounder systems	
H2.4a Multi-	(i) Principles and geometry of	Explain the basic principles of multi-beam
beam echo	multi-beam sonar systems	sonar transmit and receive beam forming
sounders	(ii) Combination of transducer	and beam steering. (I)
	elements into transmit and	
(A, I)	receive arrays.	Explain the effect of aperture size and
	(iii) Beam stabilization and beam	element spacing on array performance. (I)
	steering	
	(iv) Amplitude and phase bottom	Analyze the techniques of amplitude and
	detection	phase methods of bottom detection and
	(v) Variations in beam spacing	relate them to depth uncertainty. (A)
H2.4b Multi-	and footprint size	Tune acoustic parameters on-line for
beam system	(vi) Backscatter recording modes	depth and backscatter.
parameters	(e.g., beam average, side scan	
	time series, beam time series)	Determine the beam footprint size and
(A)	(vii) Backscatter and seabed classification	sounding spacing across the swath and
	(viii) Water column data	assess the limitations and likelihood of
	(ix) Power, gain, pulse length	detecting objects on the seafloor under
	(in) i ower, gain, puise lengui	varying surveying conditions.
1		

		· · · · · · · · · · · · · · · · · · ·
	(x) Multiple signal returns,	Explain the use of water column returns
	aliasing of multiple signals in	and differentiate from bottom detection.
	the water.	
H2.4c Multi-	(i) positioning system, telemetry,	Specify survey system to perform a multi-
beam systems	motion and attitude sensors,	beam survey in accordance with
	(ii) acquisition system,	application requirements.
(A)	(iii) source of reference level (i.e.	
	tide gauge, GNSS),	
	(iv) Sound Speed measurements	
H2.4d Multi-	(i) Multi-beam data elements:	Describe how and where data elements are
beam data	(ii) Beam and travel-time data	combined to produce geo-referenced
processing	(iii) IMU/INS	soundings.
	(iv) Positioning data	
(A)	(v) Time stamping	Integrate and merge data elements in
	(vi) Offsets between sensor	preparation for data processing.
	reference points	
	(vii) Sound speed profile	
	(viii) Data file formats	
H2.4e	(i) Principles and geometry of	Analyze the principles and geometry of
Interferometric	interferometric (phase	interferometry and phase differencing
Sonar	measurement) sonar systems	bathymetric sonars and the arrangement
	(ii) Sounding determination	of transducer arrays.
(A)	principles	
	(iii) Mounting methods and towing	Explain the need for filtering phase
	(iv) Transducers arrangement	measurement data for depth, object
	(v) Sounding filtering and binning	detection and backscatter.
	techniques	
		Explain the effect of aperture size and
		transducer geometry on array
		performance.
		Assess the relative merits of multi-beam
		and phase differencing systems for
		specific mapping applications in water
		depths from very shallow to full ocean
		depths.
H2.5 Backscatter	r	
H2.5a	(i) Relationship between	Specify and configure a side scan sonar
Backscatter	backscatter content and	and a swath echo sounder for backscatter
from side scan,	characteristics of the seabed,	acquisition under varying environmental
interferometric	water column properties and	conditions and for specific application.
swath sonars	acoustic signal parameters	and a second specific upprovident
and multi-beam	(ii) Generation of backscatter	Monitor and assess quality on-line and
echo sounders	information within acoustic	apply appropriate compensation.
	systems	TT J TT
(A)	(iii) Principle of backscatter	Apply backscatter principles to produce a
(**)	compensation for absorption,	compensated backscatter mosaic.
	incidence angle, gain and	
	power	
	(iv) Mosaicing	

H3: LiDAR and Remote Sensing		
Topic/Element	Content	Learning outcomes
H3.1 LiDAR		
H3.1a Airborne LiDAR systems	 (i) Wavelength, water penetration, ground detection and laser safety. 	Determine the applicability of topographic and bathymetric LiDAR to specific mapping applications.
(A)	(ii) Scanning frequency and pattern in relation to power, coverage and spatial density.(iii) Influence of sea surface	Specify the appropriate LiDAR technology for given applications and identify supporting survey operations required to conduct the survey and
H3.1b Airborne	roughness, water column turbidity on the beam pattern	process data. Identify potential sources of error in
LiDAR data	and penetration.	combined topographic and bathymetric
products	(iv) Sea bed optical characteristics and bottom detection.	LiDAR data and apply corrective processing techniques as appropriate. (I)
(I, A)	(v) Influence of seabed on reflectance	Evaluate results (x,y,z) of specific
	(vi) Relationship between full waveform signature and seabed characteristics.(vii) Secchi disc and Secchi depth	bathymetric LiDAR surveys for compliance with hydrographic requirements. (1)
	 (viii) Impact of structure and canopy on topographic LiDAR (ix) Optical characteristics of coastal terrain. 	Explain how to incorporate information from full waveform analysis in the production of LiDAR mapping products. (A)
H3.1c	(x) Influence of geometry and	Determine situations where terrestrial and
Terrestrial LiDAR	waveform on feature detection.(xi) Integration of components including time stamping,	vessel-based LiDAR data can be used to complement other coastal and offshore
(B)	attitude compensation, sensor offsets and networking.	spatial data. Explain the need for calibration and
	(xii) Sources and levels of uncertainty associated with LiDAR data and products.	validation of vessel-based LiDAR and describe how data from such system will be integrated with other data streams.
	(xiii) Combined bathymetric and topographic LiDAR systems(xiv) Vessel-based LiDAR	
H3.2 Remote Ser		
H3.2a Remotely	(i) Multispectral imagery and	Explain and compare the methods that
sensed bathymetry	water penetration in relation to wavelength	enable depth to be determined from wavelength together with optical
(1)	(ii) Optical properties of sea water.(iii) Model based and empirical	properties of both the water and the seabed.
	inversion methods for determining bathymetry.(iv) Atmospheric corrections.	
	(v) Spatial resolution and accuracy in position and depth.	
	(vi) Reflectance properties of the sea floor.	
H3.2b Satellite	(i) Missions and sensors	Describe the principles and limitations of
altimetry	(ii) Products	satellite altimetry products including sea-

<i>(B)</i>		surface topography and derived bathymetry
H3.2c Optical methods of shoreline delineation (1)	 (i) Color imagery and multispectral imagery. (ii) Reflectance of multispectral imagery in relation to wavelength and terrain characteristics. (iii) Use of imagery in shoreline mapping and identification of other topographic features. (iv) Uncertainty associated with map features derived from imagery. (v) Geometrical properties of satellite images and aerial photographs 	Describe geometrical properties of images and principles of orthorectification. Explain how imagery can be used in planning survey operations and in supporting hydrographic products. Compare image based methods with those of LiDAR for shoreline delineation
H4: Survey Op	erations and Applications	
Topic/Element	Content	Learning outcomes
H4.1 Hydrograp	hic survey projects	·
H4.1a Hydrographic survey requirements (<i>A</i>)	 (i) IHO S-44 and other survey quality standards. (ii) Underkeel clearance (iii) Procedures and installations required to conduct hydrographic surveys of specific types, for example: Nautical charting survey Boundary delimitation survey Boundary delimitation survey Ports, harbor and waterways surveys. Engineering works and dredging surveys Coastal engineering surveys Inland surveys Erosion and land-sea interface monitoring Oceanographic surveys Deep sea and ROVs /AUVs surveys Seismic, gravity and geomagnetic surveys Pipeline route, pipeline installation, inspection and cable laying surveys Wreck and debris surveys. 	Establish procedures required to achieve quality standards in hydrographic surveys. Specify the type of survey system and equipment needs together with associated parameters and procedures for various components of the overall survey operation. Evaluate the impact of local physical and environmental factors on survey results.
H4.1b Hydrographic survey project management	 (i) Hydrographic instructions and tenders. (ii) Estimating and drafting survey work plans and schedules 	Prepare hydrographic specifications, instructions and tenders associated with survey objectives.

(A)	 (iii) Risk assessment in survey operations associated with the proposed work plan. (iv) Assessment and reporting of work progress against the work plan (v) Health and safety compliance (vi) Environmental impact of survey activities (vii) Emergency Response Situations and Plan 	Estimate the resources, scheduling and timing associated with hydrographic projects and prepare project plans including health and safety requirements, environmental issues and emergency response. Define, assign and distribute the roles and responsibilities of individuals within a survey team. Prepare progress reports and submit interim project deliverables.
	hic survey operations	
H4.2a Survey planning (A)	 (i) Components of survey planning including on-board equipment, platform's dynamic positioning, remote installations, data from 	Plan survey lines and schedule to accommodate environmental and topographic conditions for the vessel or aircraft and for towed, remote and autonomous vehicles.
	 satellites and telemetry links. (ii) Planning of survey operation considering general depth, bottom character, water column variability, weather, currents, tides, coastal features and vessel/flight safety. (iii) Logistical considerations for 	
	(iii) Logistical considerations for survey operations(iv) Maintaining safe working conditions.	
H4.2b Single Beam operations (A)	 (i) Transducer mounting (ii) Calibration techniques and requirements (iii) Line spacing, orientation and 	Specify survey procedures and quality assurance practices to perform a single beam survey in accordance with application requirements.
	 line planning (iv) Causes and effects of motion artefacts and water properties artefact on data (v) Integration with ancillary systems (vi) Compensation for vessel motion, attitude, dynamic draft (vii) Feature development (viii) Data logging parameters 	Select appropriate range, scale, frequency and pulse repetition rate for specific application in relations to spatial resolution, bottom penetration, depth of water, and water column analysis.
H4.2c Multi- beam and Interferometric operations	 (i) Selection of platform and deployment (hull mount, pole mount, AUV, ROV) (ii) Swath coverage and resolution (iii) Object detection 	Specify survey procedures and quality assurance practices to perform a multi- beam or interferometric survey in accordance with application requirements.
(A)	(iv) Sound speed profile(v) Survey speed in relation to system parameters	Identify deficiencies in multi-beam echo sounder or interferometric sonar data, relate issues encountered to system or operational factors and respond appropriately.

CMFP: COMPLEX MULTIDISCIPLINARY FIELD PROJECT

Programmes must include a supervised and evaluated Complex Multidisciplinary Field Project with a minimum aggregate period of **at least four weeks**; see "GUIDELINES FOR THE IMPLEMENTATION OF THE STANDARDS OF COMPETENCE FOR HYDROGRAPHIC SURVEYORS AND NAUTICAL CARTOGRAPHERS".

The Complex Multidisciplinary Field Project for Category "A" level shall comprise a comprehensive field survey incorporating different aspects of hydrography in a complex environment with varying sea-floor and oceanographic conditions.

Students should undertake:

- Survey specification and planning;
- Hydrographic and oceanographic measurements using a comprehensive suite of instruments;
- Data processing, quality control and quality assurance ;
- Preparation of different type of product deliverables and reports.

Note: The Complex Multidisciplinary Field Project does not include the practical exercises that form a part of the course modules syllabi and are designed to complement the theory component.
