## IHO S-58 Edition 6.1 Test Datasets

**Introduction:**

S-58 specifies the minimum checks that producers of ENC validation tools should include in their validation software. The checks have been compiled from checks provided by a number of Hydrographic Offices and software companies. S-58 was previously Appendix B.1, Annex C of S-57 Edition 3.1. Validation software that include these checks must be used by Hydrographic Offices to help ensure that their ENC data are compliant with the S-57, Appendix B.1 ENC Product Specification.
